I tuned in late, but isn't it obvious that a 20-mile "cordless phone" will reach *everyone* (or at least every potential eavesdropper) within a 20-mile radius?

It's all too easy for people to believe that radio is a magic link from point to point. It's not. It's a signal blanketing an area, plus at least one receiver to pick it up.

I used to write the Q&A column for Electronics Now (now Poptronics) Magazine. About once a year I got a question about super-range cordless phones. Nobody ever seemed to realize there would be a privacy problem.

I am considering purchasing an Icom IC-R2 scanner, and I'd like to hear comments from any owners or previous users. I am looking for something small and useful, as opposed to balls-out bleeding edge performance.

Since the thing has no keypad, how do you enter frequencies into the memory banks without downloading from a computer?

Any comments on this unit? Many thanks for any and all helpful replies.

Source record: 62920

I have a Uniden Bearcat BC200XLT that has been stored for a year or so. Just got it out, bought a new battery pack for it, and fired it up. Seems to work EXCEPT I can't get the squelch to break - no matter the setting of the squelch knob, I get no output on the speaker, and the unit will not lock on to any know good signals (like the local 162Mhz weather broadcast). Even if the rubber ducky was bad the squelch should break if turned down enough on no signal and I should hear something, so obviously this thing is FUBAR.

Any suggestions from any BC200XLT owners? I have done the MANUAL-2-9 reset procedure.

Thanks.

P25 debate: The digital standard revisited
By Bernie Olson
Mobile Radio Technology, Jul 1, 2001

Editor's note: MRT's April 2001 article, ï¿½Does the Digital Radio Standard
Come Up Short?ï¿½ by Stephen Bartlett, drew strong response from the
standards-creation community. A critique and technical assessment of the

article has been prepared on behalf of P25 proponents by Bernie Olson,
chairman of the Telecommunications Industry Association TR8.18
Committee on Compatibility and Interference. Following his analysis, we
also present a further clarification by author Bartlett of his position.

The article ï¿½Does the Digital Radio Standard Come Up Short?ï¿½ does a gross
disservice to Project 25. Although there are some good technical
descriptions of each modulation, the author's comparison uses different
performance criteria for the three modulations.

He then compounds the issue by using free-space propagation loss for a
range comparison. Free-space loss is only valid for point-to-point paths

where 0.6 of a Fresnel zone clearance is provided. In the land-mobile
environment, this is commonly not the case. Therefore, the propagation
power-loss exponent is closer to four than the free-space value of two, as
used in the author's comparison. This use of different performance criteria
and an extremely liberal propagation loss model has resulted in a distorted
conclusion that cannot be supported in an actual land-mobile radio
environment.

The flawed methodology used by the author is further aggravated by the
use of information from different sources. The author did not acknowledge
any disparity among the various reference levels, specifications or derived
values from the different sources. Tables 1 and 2 on page 20 clearly show
the difference between the assumptions used by the author and those
embodied in TIA-TSB88-A. The first table shows the relative coverage
range differences based on the criteria values from ï¿½TIA/EIA
Telecommunications Systems Bulletin TSB88-A, June 1999.ï¿½ These values

are based on a propagation power-loss exponent of 4, more typical of land-mobile communications. The derivation of these values is presented later. The second table is extracted from the author's chart. The receiver
IF bandwidth is indicated for the different scenarios.

The results in Table 1 are dramatically different from the author's conclusion chart (Table 2).

The author bases his range arguments on basic carrier-to-noise criteria derived from various references. However, when the author calculates C/N

from receiver bandwidth and published receiver threshold ï¿½specï¿½ data, he

fails to account for receiver noise figure. One could leave receiver noise
figure out of the picture and reference all performance to the receiver (demodulator) input, as the author attempts to do. This can, and does, distort the results unless a common noise figure reference is used.

Two receiver sensitivities (static and faded) are given in TIA-102 publications. The static sensitivity is used to make laboratory or bench

measurements. For analog radios, this benchmark is 12dB SINAD. For digital radios, this benchmark is 5% bit-error rate. Static sensitivity is not
used in predicting coverage or range. It is used to ensure that the receivers have a published performance specification that customers can measure and use to compare receivers from different vendors. This is the

receiver sensitivity value that normally appears on manufacturer's specification sheets.

The TSB88-A, TIA102.CAAA and TIA102.CAAB documents also include faded sensitivity values. There is no analog faded sensitivity standard, but
the median of the values used by various system designers is 13dB above the 12dB SINAD value for performance. For digital radios, the typical value
to achieve 5% BER in faded conditions is 6dB to 8dB above the 5% BER static sensitivity level. However, 5% BER in a faded environment is insufficient to produce acceptable audio. A lower BER is required to achieve
acceptable audio quality levels, with 2.6% BER being considered the minimum design level for Project 25 digital radios using the IMBE vocoder.

Different scenarios

The author apparently used pieces of different specifications but failed to
recognize the different scenarios these values are intended to represent.

Also, many of the values cited for C/N are referenced relative to the receiver's ï¿½thermal noise threshold,ï¿½ which is the sum of the receiver's

noise figure and the thermal noise-floor level based on receiver bandwidth.
It appears the author assumes that the reference is just to the thermal noise-floor level.

For example, in one reference the author cited the TIA102.CAAB performance recommendation, which refers to a static reference sensitivity of -116dBm at 5% BER. This value is correct. However, the author failed to include the noise figure of the receiver in his analysis. For example, a noise figure of 10dB would result in a required C/N figure of 10.4dB [-116dBm static sensitivity -(-136.4dBm thermal noise floor at 5.76kHz IF bandwidth +10dB noise figure)]. This figure is much closer to the 7.6dB value as shown in Table 3 on page 24. Furthermore, when one considers that TIA's specification is a ï¿½minimumï¿½ value and that manufacturers' equipment typically exceeds that figure by 2dB to 3dB or more, the Table 3 C/N value is confirmed.

In another example, the information from the government Web site referred to by the author is accurate, but the author's interpretation is incorrect. The -121.4dBm level measured is for static sensitivity at 5% BER that occurs at 7.6dB C/N. This calculates to a receiver thermal noise floor of -129dBm, implying a receiver noise figure of 7.4dB (-129- (-136.4)). The published static sensitivity for that receiver is -119dBm, so that particular receiver exceeded the manufacturer's published specifications by about 2.5dB.

The author also misconstrued manufacturer's data. The level that was referenced (14dB) refers to the faded 5% BER, which is specified in TIA102.CAAB as being 8dB more severe than static conditions. Properly represented, this material would produce a calculated faded C/N of 15.6dB (8+7.6) relative to the receiver's thermal-noise threshold. However, these should accurately be portrayed as ï¿½minimumï¿½ values, even though typical measured values are between 6dB and 8dB. That brings the manufacturer's value of 14dB into the expected range.

We cannot support the author's value of 6dB for analog FM. It lies somewhere between a static 12dB and 20dB SINAD. Under static conditions, it could be argued that this is a reasonable value. However, it would not be a representative value under faded conditions that delivers acceptable audio quality to the user. As indicated in Table 3, the recommended faded C/N value is 17dB, an 11dB difference before adjusting for filter bandwidth differences.

We are particularly disturbed that only anecdotal evidence was presented claiming lower range from Project 25 C4FM, while range was represented as an absolute derived from empirical data. Many narrow bandwidth digital systems have been installed, and coverage

is always greater than analog unless there is interference present*.

Published industry reference

We would encourage you to review the correct criteria values when making

your own assessments. Those values are located and published in ï¿½TIA/EIA

Telecommunications Systems Bulletin TSB88-A, June 1999.ï¿½ TSB88-A is a technical reference document developed in conjunction with the entire suite
of Project 25 documents by a committee representing vendors, users, frequency coordinators and regulators. It was developed to provide frequency coordinators with the necessary information to determine frequency reuse as well as with a methodology for determining coverage range in the presence of co-channel and adjacent-channel interference. In
that context, this information allows for the use of computer programs to
evaluate potential frequency selections and to maximize coverage range while minimizing interference.

Because different digital modulations have different performance characteristics, a range of channel performances was developed, loosely based on the ï¿½circuit meritï¿½ definitions used for analog system evaluation.
The definition is described as delivered audio quality and refers to:

How easy or difficult it is to understand the intelligibility of a signal.
Whether or not part of the audio is missing, requiring the message to be repeated, and if so, how frequently.
What the detractors are, e.g., noise for analog or artifacts (distortions) for digital.

New systems are designed for a minimum DAQ of 3.0. A DAQ 2.0 is considered to be difficult to listen to, requiring considerable effort and
frequent repetition for understanding. The higher DAQ values are defined

for higher performance levels. They are defined as equivalent intelligibility
to static SINAD values, but in the presence of Rayleigh fading (multipath),
as experienced in actual usage.

Table 3, extracted from TSB88-A, shows the values for reference sensitivity (static C/N ratios) and the faded carrier to interference plus
noise ratios, (Cf/(I + N)) for various DAQ values. The interference component, I, is included because interference is considered to be another
detracting noise source.

It is important that a user or system engineer recognize that static conditions are only valid for bench measurements and are a way of comparing performance of individual units. By subtracting the Cs/N, the ï¿½noise floorï¿½ of the receiver can be determined. The Cf/(I + N) then determines the signal level required in the presence of fading and other

potential detractors.

For example, analog 12dB SINAD Cs/N is 4dB. If a manufacturer's published static receiver sensitivity is -119dBm, then the receiver's ï¿½thermal noise thresholdï¿½ would be at -123dBm. If faded analog DAQ 3.0 Cf/N is 17dB, then the faded signal level for system design would be -106dBm (-123dBm thermal noise threshold +17dB Cf/N).

The width of the IF filter also needs to be considered. Wider IF bandwidths
produce less distortion and better channel performance at lower Cf/N. However, this comes with a price because wider IF bandwidths are more susceptible to adjacent-channel interference and result in higher thermal
noise powers in the receiver.

The author selected 14dB for C4FM (equivalent to a DAQ 2.0 [in fading]),

the static value (7dB) for ?/4 DQPSK and a static value (6dB) somewhere between 12dB SINAD and 20dB quieting for analog FM. It is difficult to conceive how three disparate criteria could be used to arrive at a uniform
and accurate conclusion.

Comparing digital modulations

As can be seen from Table 3, compatible four-level FM (C4FM) shows slightly degraded performance when compared to ?/4 DQPSK, yet both have better performance than analog FM, particularly at higher Cf/N values.

As stated earlier, one should use a constant receiver noise figure reference. For the Table 1 analysis, the values were calculated assuming

the same noise figure for all receivers. The comparison then becomes a simple matter of determining the difference due to bandwidth and the difference required for DAQ 3 and then calculating the relative ranges using a power exponent of 4.

The differences between noise power of various IF bandwidths are indicated in Table 4 on page 28.

The difference in faded C/N between analog FM (17dB) ï¿½ digital C4FM (16.5dB) = 0.5dB. (0.5dB + 3.44dB for the difference in the required receiver IF filter bandwidth = 3.94dB.)

The range difference using analog FM as the reference is:

The difference using ?/4 DQPSK is

Taking the absolute best case where the ?/4 DQPSK uses a 5.7kHz ENBW filter would produce a 1.35:1 ratio, an 8% increase over C4FM, but at the price of a non-compatible over-the-air interface.

The author discussed the distortion effects of transmitter filtering on the modulation. Typical ?/4 DQPSK implementations use a raised cosine pulse shape with the pulse-shaping split between the transmitter and the receiver. This technique, called matched filter, can be shown to result in theoretically optimum sensitivity under Gaussian noise. Part of the Project 25 deliberations was matched filters vs. pulse shaping. Project 25 decided not to select a matched filter system but rather to concentrate all the pulse shaping in the transmitter. Doing this makes the modulation compatible with linear and constant envelope (FM) transmitters and receivers. A slight loss of sensitivity exists compared to ?/4 DQPSK. However, the selected modulations, C4FM and linear CQPSK, are compatible in a Project 25 receiver. Thus. the receiver does not care if the signal is modulated with C4FM or linear CQPSK. This allows a 12.5kHz channel bandwidth transmitter using C4FM modulation to communicate directly (over the air)

with a 6.25kHz channel bandwidth receiver as long as the center frequencies are aligned. This creates a migration path to narrowband 6.25kHz channel systems. This migration path was encouraged and endorsed by the Project 25 user community.

Some of the author's comments about how digital technology degrades over-the-air-performance need to be considered and put in the correct context. Digital Project 25 radios have significantly greater range than

analog radios for systems designed for DAQ 3.0 or above. At the fringe of coverage (below signal levels normally used for system design), digital begins to break down at a faded BER of about 8%. This is in the general range of 12dB to 14dB Cf/N. At these weak signal levels analog would still be understandable (with great effort) while the digital radio would mute.

However, migration to narrowband analog FM does not improve this situation. Analog FM doesn't perform as well in narrowband channels as it does in 25kHz channels. If narrowband analog is deployed, there is a 6dB

degradation in performance from reduced deviation coupled with a 3dB improvement in receiver noise performance due to the narrower IF filter,

resulting in a 3dB overall degradation. High-signal performance is reduced
and a high SINAD cannot be achieved because some FM sideband information is lost passing through the narrow IF filter. Also, narrowband
analog becomes more susceptible to noise pops, giving up the advantage that normal analog FM enjoys.

*Interference has been increasingly evident in portions of the 800MHz band where nearby cellular/SMR deployments create coverage holes due to their high signal levels where the desired signal is relatively lower. Both
digital and analog systems are affected, but digital systems will mute while
analog systems may provide audible clues to a user. The absence of audible clues is frequently reported as a range problem. This topic was the
cover story in MRT's March 2001 Issue, ï¿½Why can't we talk? It's the interference.ï¿½ Visit www.apco911.org for a copy of the Best Practices Guide
described therein.

Muting thresholds: Stephen Bartlett's response

I appreciate Mr. Olson taking the time to offer his perspective on my article
ï¿½Does the Digital Radio Standard Come up Short?ï¿½ (April 2001, MRT), and

his candor in pointing out several key issues he had with it.

I wish to clarify to Mr. Olson, and the mobile radio community, a misunderstanding about what my article was reporting. The study I described wasn't about the added range of audio quality that the P25 digital
design achieves, but rather a discussion of the differences between the narrowband digital and wideband analog FM systems at the edge of radio coverage, or in other low signal-to-noise environments. As Mr. Olson pointed out, systems are not typically engineered for these fringe areas.
However, it is under these conditions that radios will either mute or not,
making coverage differences especially noticeable. The focus of my article
was on how these different muting thresholds affect absolute range.

Mr. Olson is justified in suggesting the use of the number 4 for the power-law exponent describing the path-length dependency, in deference to the ï¿½extremely liberalï¿½ exponent of 2 that I chose. His figure reflects
good engineering practice when designing mobile systems. It also reduces

the scale of any range difference ratio.

He was correct to point out my not mentioning the receiver noise figure (NF) in the overall noise power (Pn) calculation. The correct formula is

actually (neglecting interference):

For the analysis, I defined all receivers with equal and ideal NFs, but neglected to clarify this point. Where I erred was in assuming the manufacturer's specifications, and other measured data I used to compare

with the 4-FSK model, did the same. Many published specifications don't clearly state whether their data are static Cs/N, faded Cf/N or if the receiver noise figures have been removed, included or normalized in their
published values.

Muting thresholds will affect the coverage of the mobile radio system. Comparing these thresholds is the challenge. In his article, Mr. Olson stated that using a faded channel (Rayleigh fading) Cf/N ratio is more appropriate for modeling system performances than static Cs/N ratios. He

also mentioned that no analog fading sensitivity standard exists, and he

further recommended a faded value of 17dB for FM systems. This may be appropriate for determining a DAQ of 3.0, but not for a threshold mute. There are references showing critical wideband FM receiver thresholds are
actually closer to 10dB; less with threshold extension (Rappaport, Wireless
Communications). For digital systems, the mute threshold is defined by the
critical bit-error rate where data cease to be reliably detected and vocoders to operate. It was good of Mr. Olson to recommend using the more realistic 2.6% BER threshold value for the IMBE vocoder to deliver more accepted audio in a faded channel. However, because of the focus of

my article, I chose the 5% BER value as the digital mute threshold.

For a more complete approach in determining the expected faded channel performance for the digital systems, refer to J. Proakis' book Digital Communications, Fourth Edition, where the ideal theoretical performances

of many common digital modulation schemes in a Rayleigh faded channel are derived. In such a channel, the error rates vary inversely with signal to
noise ï¿½ unlike static exponential error behavior. In the case of binary,

noncoherent, orthogonal FSK modulation, a Cf/N value can be found directly from the probability of error (Pb) using the Rayleigh channel formula: Cf/N (dB); 10log (1/Pb). We can use this equation to calculate the
Cf/N performance for any FSK signal at 5% BER. Orthogonal binary FSK and 4-FSK channels will perform nearly identical except at low Cf/N. Therefore we can use the Rayleigh formula to estimate C4FM's average departure from ideal performance in weak signals due primarily to its

nonorthogonal four-level modulation.

Mr. Olson reported that in the faded channel, C4FM will break down in the
fringe areas with 8% BER at a Cf/N of 12dB to 14dB. The Rayleigh channel

formula predicts the ideal binary FSK Cf/N value at 8% BER to be 11dB.
Thus, Mr. Olson's 8% BER value shows that C4FM has from 1dB to 3dB of
degradation (2dB average) from ideal. From this, we can determine the
optimal Cf/N mute threshold for C4FM modulation at 5% BER:

Using this optimal C4FM mute threshold of 15dB, the referenced wideband
FM mute threshold of 10dB, and the bandwidth adjustment of 3.44dB, an
absolute range difference between the digital C4FM and wideband FM
analog systems can be calculated, using the equation recommended by Mr.
Olson:

This 0.91 value shows a potential loss of absolute range between the
C4FM
digital and wideband FM analog systems, due to their different muting
thresholds. Realistically, in the unpredictable faded channel with the
parameters of analog and digital modulation being so different, there
may
be a variety of cases where either system may outperform the other,
perform nearly the same or vacillate between these extremes ï¿½ especially

in fringe areas where muting occurs. It is in the best interest of the
community to know how these digital narrowband systems perform in a
variety of locations and scenarios as they become more widely
implemented. If problems can be predicted early, they can be mitigated
early.ï¿½ S. Bartlett

The RS 2067 is good if you don't intend to attach a high gain antenna to it for VHF HI listening. That band gets easily over-loaded. Otherwise it's a very fine radio.

Except now the active components avoid any real
duty in favor of training while the reservists do most
of the missions. If it keeps up, the active side will
be there only for training the reserves.

A little bit of both. But then we had the active duty
Air Force bitching in December 1990 on how they
were not being rotated out after 90 days. And we had
active duty soldiers bitching about how they signed up
for college money, not a war.

That is what you get when you have a mercenary
military force instead of ALL males doing their duty
under the 2nd amendment.

This is the USA, love it or leave it. Support your government
& the people who sacrifice their will & their lives to serve
in the military to protect YOUR freedom & rights.

I never saw a reservist who actually refused to go to duty,
they did complain about other stuff, like low pay. But they still
went to duty. Face it, the reserves are the backbone of the US
military & the military would be nothing without the reserves.

I do have one suggestion for you, **THINK** before you
respond to this thread, before making a fool of yourself AGAIN!

PAX Americana is defending America. It is
our right to force our will on the world. We
are the greatest country and power since
the Roman Empire.

And I would damned be more willing to
fight on someone else's soil than my own.
Destroy the rest of the world, do not wait
so long that our country is destroyed. If
the battle is on our soil, we lose no matter
what happens. That is too close to my
family.

Again, most of the Active forces bitched too.
We have a bunch of mercenaries, not professionals.

And the US military does not reflect the American
people. It is skewed to the right, hard.

The active duty people have always needed the reserves, they can't
get the job done without the reserves. THAT is why the reservists
are often times called the "Pros", because they give reserves the
more difficult missions that the regulars know they are not capable
of.

The 2nd amendment reflects your views. Our military,
to include police and fire, was not to be a bunch of
paid mercenaries but rather it was to be the duty of
all.

90% of all fires in Indiana are fought by
volunteer fire fighters. That is true about
most states.

> Barry to as well.

Think of it this way. The liberals (socialists) have
pushed the idea that only paid professionals (mercenaries)
can do anything. So many, especially those who
are educated professionals, agree, thinking that
it frees them from most of the responsibilities of
caring. To them, paying taxes is caring.

It is like Scrooge. He wanted government to do
it all, after all he paid his taxes so why did he have
to personally care.

America was founded on all of us being involved.
It is our safeguard. The military was to be the militia
(all males fit to serve). The political process was
to be everyone, not just a few professionals.

The problem is that we are fat, dumb and happy.
And very willing to let the mercenaries run our
lives.

The Air Force uses reservists far more than
any other service. Some AFR do 6 month
tours every year.

OTOH, if he were involved in an emergency, and the hams knew it; he might
"accidentally" be left off the coordination sheet. Kinda hard to sue when
you're a casualty.

Well as you cant even sign your posting, that said a lot about you, to me
Anyway that aside, If you new scanners, you would know the frequency
coverage, I.e Yupiteru are full coverage and as for the rest, I guess you
can call me like the 100's of satisfied customers have done, and yes
everytime I re list an item it does cost me money and like you, I guess your
all out to try to get the best deal and if I can keep my overheads down I
can pass it on to the end user, I am sure you would do exactly the same, If
you cannot tell what a government spec. receiver frequency coverage is, ,
all you have to do is ask
I am sorry that people like yourself , with a bad attitude, destroys the
hobby, not enhancing it, Like most dealers I am trying to do a good job at
promoting radio in general so that the hobby lives on, since the popularity
of the internet, the radio hobby has suffered a blow and keeping up interest
and providing a good deal is vital to everyone.
Well that's that off my chest,
Best Regards

Is there something, anything, in my response that you didn't
understand? Again- I am NOT asking you or anyone else to go to
the other side of the earth to enforce American global control.
If you think that old "America, love it or leave it" B.S. will
silence people that don't agree with you, you're about 30 years
out of date. It didn't work then; it won't work now.

>PAX Americana is defending America.

No, it is not. It is the projection of American authority in
places that America does not have any right to control.

> It is
>our right to force our will on the world.

Try convincing the rest of the world of that. Good luck.

> We
>are the greatest country and power since
>the Roman Empire.

That's correct. Do you see Rome as a particularly admirable role
model? They were the very embodiment of evil.

>And I would damned be more willing to
>fight on someone else's soil than my own.
>Destroy the rest of the world, do not wait

>so long that our country is destroyed.

Those are not the only 2 possibilities. But deciding to control the world, and destroy the world just to make sure that nothing can happen to America, would be biting off rather more than you can chew.

>the battle is on our soil, we lose no matter
>what happens. That is too close to my
>family.

I suggest you at least let it get a little closer than Somalia. You get a little thin on the ground when you try to control the whole world.

Does anyone have this adapter? Would you confirm whether the headphone jack is mono only -- I don't seem to be able to get mine to work in stereo plus I cannot get the volume to go extremely loud. Also, the video output appears to be weak. It works well with TV stations coming in at S9+20 but anything less than S9 appears to be a problem -- is this normal? Would a video amplifier help. Would it matter if I switched to a black and monitor security monitor (more sensitive??)? Any help appreciated. Thanks.

Hello and thanks for your interest.

I have a Uniden Bearcat BC9000XLT for sale. The unit is in mint condition with no cosmetic or functional problems. The unit comes with the stock extendable antenna, the user manual and the shop manual. I'm asking $300 shipped but I'm open to offers. Thanks again.

I don't know about the AF using reservists more that any other
service, but they certainly do use reserves a lot. It was an ANG group
that rescued that sick Doctor on Antartica a few months ago, & it was
an AFR group that flew the whale "Willy" to Greenland.

I have owned this fine scanner for over a year. You are correct in your statement that this radio does not have a numbered keyboard pad that would allow frequency entries in a conventional manner. However, frequencies can be entered into the unit by selecting the appropriate mode and turning the knurled knob on the top of the unit. That knob is not a volume. The volume is adjusted with the up down arrows. Due to size constraints on the unit...all features are accessed through the menus. These are outstanding scanning radios. The combination of small size, relatively extensive capabilities, outstanding audio and cheap price make these radios more desirable to own than not. Plus, the fun factor of this unit is off the scale!

No, this cable was older than the RG-213 spec! It's just that RG-8
has no real meaning any more. Back then, it was a real spec.

Interesting perspective on the Nextel proliferation.

Want bright lights & noise? Come to Nexteland! Don Bishop
Editorial Director
dbishop@intertec.com www.mrtmag.com Mobile Radio Technology, Jun
1, 2001
[Nextel] charges much more for dispatch service than was charged
before the FCC facilitated the sale of spectrum
and the construction of Nexteland.

Here's an idea. Let's sell our national parks.

Why not? Think of all the money that would be generated for the
U.S. Treasury. Money that could reduce the deficit,
reduce the national debt, pay for military spending and save
Social Security and Medicare.

Plus, the National Park Service would be relieved of the burden
of maintaining buildings, roads, trails and other
improvements. It could reassign its staff to other, more
important jobs than that of park ranger.

Who would be the buyer? Prudential Insurance, the nation's
largest insurer and real estate owner. That's where
insurance premiums are invested, by the way: real estate.

Prudential could win big in the national park auctions.
Yosemite, Yellowstone, Grand Canyon, Great Smoky Mountains
ï¿½ owned and operated by Prudential for the benefit of us all.

Prudential knows how to run real estate. It knows how to get the
ï¿½highest and best useï¿½ from a piece of property.

Not like the National Park Service. The National Park Service
hands out trifling concessions to a few businesses that
operate a limited number of lodges and restaurants on park land.
Also, the National Park Service charges a nominal
entrance fee that allows just about anyone to use the parks.

And that's a crying shame. Think of what we're missing by not
having ï¿½Prudentialandï¿½ in almost every national park,
with rides and entertainment keyed to natural wonders and
insurance salesmen dressed in bear suits. To increase
attendance at select national parks turned into
ï¿½Prudentialands,ï¿½ Prudential could close the rest of them.

The FCC could teach the National Park Service a thing or two. It sells spectrum to plenty of buyers, and the bigger, the better. And when it comes to two-way radio service on the 800MHz and 900MHz bands, no one is bigger than Nextel. It owns thousands of frequencies, some purchased from license-holders and some bought at FCC auctions.

The FCC used to run a ï¿½national park,ï¿½ using its own employees to sell individual licenses, keep order and give many small businesses access to spectrum. Now, the FCC is happy to watch the bright lights, noise and crowds at Nexteland, free from the burden of administering the property it sold. Where Nextel hasn't developed the spectrum it owns, that spectrum is closed to other users.

Prudential makes money, and it advertises its way to a good rep while paying huge settlements for allegedly overcharging or misleading its customers.

Nextel could teach Prudential how to lose money. Whether Nextel overcharges is a matter of opinion, but it charges much more for dispatch service than was charged before the FCC facilitated the sale of spectrum and the construction of Nexteland.

I don't think the public truly benefits financially from spectrum sales. Money paid by carriers for spectrum is collected from telecom users, and that's most of the population.

As taxpayers, people may get some tiny relief as a result of spectrum sales. As consumers, most of the same people pay it back, maybe several times over.

Perhaps charging consumers seems fair, in a way, because those who use the service pay for it. Yet, if that were the case, why not sell the national parks and let their new owners charge enormous entrance fees to offset the purchase price and development costs? That way, only those who use the parks would be paying for them. Too bad if fewer people could afford to visit and if the park experience became more hype and less nature.

We can't turn back the clock. Spectrum sold is spectrum sold. The FCC continues to issue individual licenses only where frequencies are shared and so crowded that clearing incumbents following an auction might be impossibly expensive. But if you're new to the radio communications business since the auctions, maybe you should know that it didn't have to be this way.

In the 1.4GHz band where the FCC is considering whether to create a new Land Mobile Communications Service, it still favors auctions.

As a possible exception, the FCC said that applicants seeking traditional site licensing would be required to demonstrate special needs and a lack of means to acquire spectrum meeting these needs. Maybe there's a glimmer of hope for a tiny national park at 1.4GHz where small businesses could take a place in between Nextelands.

No... I could look at the fragment again and let you know, but I do
recall that it was labelled RG-8. Which made me do a double-take
at its quality. It was probably manufactured in the mid 60s.

Martyn,

I have been following this thread, and had to jump in here with some comments I truly believe need to be made.

Yes, this fellow was anonymous, however, the poster prior to him, a Mr. Conti did identify himself and raise two pertinent issues regarding your auctions. Apparently you chose to ignore him.

As a "radio dealer", you should know that many folks in the market for a scanner or receiver may not be as cogent of the particulars as you are. They may not, in fact, know what "government specs" means. As a "radio dealer" isn't it your job to enlighten potential buyers as to the products you sell? As someone "promoting radio in general", wouldn't it be incumbent upon you to HELP interested buyers?

You claim to have 100's of satisfied buyers, yet it seems that many of those on eBay have left you negative feedback. This should be a cause for concern with potential buyers. Additionally, it seems like the AOR 8200 MK II auction has been yanked, and the only radio you have a bid on is the R-2.

Now to the nitty gritty of this all.....

If you are in fact operating as a legit radio dealer, then you should be well aware that it is illegal for you to be selling "government spec" radios to the general public. Period. This may explain your unwilligness to dwell on this subject at length publicly.

That aside, there is no one here, or in the hobby that would begrudge any dealer the opportunity to make an honest buck selling radio equipment. However, it is blatantly unfair to all the other legit US dealers for YOU to sell uncut radios to the public when THEY cannot.

So, lets cut through all the "promoting the hobby", "providing a good deal" hyperbole, and try being honest and up front about what you are doing.

You will fare much better, my English friend....

Lensman

While I don't agree with everything Robert has said, the statement above is absolute nonsense. First, it shows a clear lack of understanding when it comes to both european and middle eastern history. Second, it shows a clear lack of understanding about the capability and resources of Saddam's military.

Wow, I really must have misread the Second Amendment. Where did you get all of that from? And how do you explain the fact that almost every major city had paid police officers, and soldiers had been paid as far back as the Revolutionary War, when that Amendment was proposed and ratified?

If you and/or your family were overseas, that could be. But I was
in America. The Iraqis were no threat to me.

We didn't have to do it in the first place. The only reason we'll
have to do it again is to successfully meddle in the affairs of
countries on the other side of the globe. We don't have to do
that. Our government chooses to, but there is no imperative to do
so.

Don't bother Eric, just one of those questions that pop up. Well, 40
year old rg-8 on VHF/uhf is almost as good as new rg-8. :-)

Thanks

Glenn

About all you can do is buy one out of the country and smuggle it in.
Any newer radio is pretty much unmodifiable, as the FCC has cracked
down on the manufacturers to prevent radios being easily modified..

Your inability to understand the above only shows how little knowledge you really have of history from the 1930's & 1940's. Germany (Hitler) was doing the EXACT same thing that Saddam was doing. Hitler had taken over nearly all of Europe by the time we put a stop to him, & 6 years of hell for the survivors & countless many who died.

I'ld like to see you make that statement to a Jewish survivors group.

That doesn't mean he wouldn't have tried, & caused a lot of pain for
his & other people. Remember, Saddam is/was not known for his
common sense or brilliant military thinking.

National Incident Notification Network

Do you listen to police, fire, EMS radios? Do you like to know what is going on before hearing about it on the news?

Well NINN is for you then. NINN is a group of people from around the country that listen to police, fire, EMS and other radio frequencies to bring you the latest, and first hand report of what is going on in your area via Email, or by Alpha Numeric pagers.

Dispatchers and Administrators Needed

Do you want to make a difference in what the "people of your area hear" Are you interested in working with a system, and group of people that want to make a difference?

Our system, and policies help you make that difference, so you can get the real news out there. NINN Doesn't have 1 person making the decisions, it has a board of directors of 5 persons making the decision, and many more on the support side of our program. No more weeks of waiting for an answer from support.
This is a Free Service, All You have to do is log on to http://www.ninn.net enter your email or pager address and start receiving Alerts
Immediately after entering your address , no forms, no approval, You will be Informed of in Progress Incidents as the happen,
NINN is in need of Dispatchers Throughout the United States, at this time all States are in Active Status if You would like to become
A Dispatcher, a short Application form is available here
http://www.ninn.net/dispapp.html as NINN Administrative Support is Incredibly Efficient, within a brief period You will receive Your Dispatch ID # and then you become part of the Action!
Links for NIMM eGroups by Region are enclosed, To find your Region click here http://www.ninn.net/regional/
Thank You for your time,

Saddam didn't have the means. He had no possibility of acquiring
the means. No matter how much he might have wished to take over
the U.S., it wasn't going to happen. Even a cursory look at the
situation would show you that.

As for me being a "Commie," that's just absurd.

What threat? Saddam's fleet of aircraft carriers, nuclear-powered
submarines, landing ships, intercontinental bombers, heavy-lift
air assault aircraft, under-way refueling tankers (both air- and
sea-), all the rest of the forces and equipment required to
successfully attack the U.S.? THAT threat? It didn't exist.

"Common sense" requires the ability to see reality and reach
conclusions based on it. Your belief that Saddam was a threat to
the U.S. is NOT a demonstration of common sense.

Source record: 62895

I live between Fort Worth and Dallas, and my scanner is practically alive with radio traffic -- particularly from DFW International Airport. I think the co-pilot's job is actually to coordinate all those radio frequencies! There must be at least half a dozen to keep track of, depending on where you are.

Six Flags Over Texas's radio frequency can be entertaining. I guess other amusement parks do the same thing. At the top of each hour they tell all their units exactly how many people have come through the gate so far, how many have left, and how many people are in the park at that moment.

Here's a dumb question. Has anybody worked out exactly why the Electronic Communications Privacy Act doesn't prohibit listening to police scanners, business band radios, and the like?

Clearly, scanner usage is permitted in the United States, but the laws seem to say that it's not (e.g., http://www4.law.cornell.edu/uscode/47/605.html). Under the law, are all police communications treated as relating to "ships, aircraft, vehicles, or persons in distress"? Even so, business-band communications would not seem to fall under that particular loophole.

1883. Rooftop antenna mounting

Newsgroup: rec.radio.scanner
Date: 2001-07-15 17:17:19 UTC
From: "Eric F. Richards" <efricha@dimensional.com>
Message-ID: <m8j3lt4oikgt7gdl4cg7nvo1g2mvjk14ef@4ax.com>
Source record: 62799

Greetings, all...

At the risk of being fatally on-topic, I want to ask a question:

I finally own my own home -- my first -- and I wanted to ask
those who already have done this about rooftop antenna mounting.

I want to put a bicone up at the peak of the roof, and I want to
use one of those "tripod" mounts for doing so. The wind loading
of a bicone shouldn't be that different from a large TV antenna,
but I want to know...

o How many people should I have as helpers on this sort of project?

o How much reinforcement from under the roof is needed? I live in
a very high wind area.

o Did you literally go out and "just do it" once you knew that your
drilling area was clear of electrical runs, or did you do a great
deal of measurements before starting? What did you measure?

o How much time did it take?

o Recommended tools?

o Recommended roofing sealant?

o Anything I missed that I must know in the above questions?

Thanks much!

Eric

For the last week or so I've been hearing codes such as "code n" - u - f - etc., given by units in the field when coding a call rather than the usual "code 81" - 92 - 83 - etc.

Assuming they're going to this new reporting system - does anyone have a list of the phonic codes and their meaning?

Please reply here in the group -

Thanks,

PG

Perhaps you should study military history a little. Everyone thought that
after WWI, Germany wouldn't have the means to do anything either. Yet,
by the late 1930's, they are marching thru other countries.

It's usually a mistake to assume that when other people disagree
with you it's a result of their ignorance. I would be very
surprised to learn that you have studied more military history
than I have. Suggesting that Iraq's power to dominate the globe
in the 90's was even remotely like Germany's power in
between-the-wars Europe does not show much of an understanding of
military history.

If you will read the thread, you'll see that I said the Iraqis
were not a threat to the U.S.- not wherever your family was. No
scuds fell on the U.S.

>>Get real.
>
> Yes, Robert, get real. If it could happen to my family that time,
> what makes you think that it couldn't happen to yours next time.

What? The fact that the Iraqis lack the means, just like in '91-
that's what.

> Habibi Saadam is a threat to any peace in the Middle East, and
> therefore the world.

The "world" was not threatened by all the wars in the Middle East
between 1947 and 1991. Countries that made it their business to
intervene in the Middle East might have been threatened, if any of
the countries involved had the means to attack them. But none
did. Some undoubtedly now do have the means to deliver small
nuclear weapons to a few targets in the U.S. via "suitcase" nukes,
that sort of thing. Our continuing policy of intervening in every
corner of the globe insures that we will be the most likely target
of such an attack, as well as bombings of buildings (both in the
U.S. and U.S. embassies abroad) using conventional explosives.
And the kicker is- nothing we can do will prevent such attacks.
Except, of course, giving up on running the world. Maybe we could
announce our resignation from that role via an ad in the Wall
Street Journal.

Have you noticed how seldom the Dutch, Norwegian, or Costa Rican
embassies get bombed? But then, they aren't trying to impose
their wills on the world.

Dear Drink,

Usenet, and I refer to -all- unmoderated newsgroups, are notorious for
material unfit for reading by a younger (juvenile) person. Or a
more sensitive viewer.

If I may make a suggestion:?
Get some kind of filter that allows only you, with a password, to
access certain or all Usenet newsgroups.

Respectfully,

Awe, the poor dears! Us full-time Americans worked for those wages
all the time, and didn't have a cushy civilian career to wail about.
We made our house payments, fed our families, and paid our taxes
all on the "1/2 pay" that the part-time American reservists were wailing
about when their bluff was called and they had to serve their
country for more than a weekend or two-week summer camp.

> > Which we used to call 'part time Americans'. Oh how some of them

One of the MAIN reasons we went over there was to protect the innocent people of Kuwait. Secondary reason was to see for sure Iraq did not have nuclear capabilities, which we failed to do...Do you remember when the Inspectors tried to get into the storage facilities, and earlier we had recorded trucks leaving the facilities HOT HAS HELL!?

THIS is why we needed to be over there....anyone with nukes in that region is a threat not only to the US but the whole bloody world! here is a scenario for ya!

Iraq kept firing on Israel (A known nuke country!) and we were not there to calm the situation. Now Israel launches a few to Iraq to show them who is boss.....ok now we have a nice cloud of radio active waste that is floating toward lets say Russia, their people are getting sick and dying, so now Russia lobs a few at Israel.......CHAIN REACTION!

In my own personal opinion (AND YES I WAS THERE!) We should have finished the job, as HE is still in power, and stocking up again.

In the end, YES we did the right thing by pulling ALL the forces to push the ass back to Iraq. NO we did not meet much resistance, but that was because WE (All the forces involved) fought this fight correctly, and with minimal casualties. Starve their forces, and prevent communication is what won that war, NOT just RESERVES, FULL TIME Military, it was a COMBINED effort! The few who are saying that the Reserves are the backbone of our Military are wrong, as EVERY war fought had BOTH on the front lines. Crap you reservist sound like a damn recruiting poster!

OK, now that I have vented, I do appreciate ALL the Military people who have given their lives for this country, If it were not for them we would not have a country to speak of!!!

> reccommendations would also be appreciated

This is a hard question to answer, since all frequency counters will be different as far as range. You can add a good antenna or amplifier to increase the range of the counter, but the counter will read the strongest signal it hears. So if you want to find the frequency used by a particular antenna, it's best to get as close as you can to it. Otherwise, you may be reading the frequency of a local FM broadcast station.

Scott,

I've had an R2 since June and I like this little radio very much. If
you program it with a PC, it's all the better. You won't miss the keypad,
BTW. However, unlike the Yaesu VR-120, it doesn't have a ferrite AM
antenna built-in, so don't expect to use this as an AM BCB radio. Comparing
it against my Uniden 220xlt, Rat Shack PRO-2042 and Uniden 780xlt - it does
a nice job against these scanners with local (and not-so-local) contacts.
AIr band coverage is fine, but I'd expect this as I'm close to major air
corridors.

All in all, I'm very satisfied. For $150. you can't go wrong.

Paul, KC2FNC
NJ

p.s. My only gripe is that I wish ICOM would put their user manuals online
like Kenwood does. How much $ can they make on reprints anyway? It may
also be an inducement for others to buy ICOM.

The statements you have made make you appear as someone who has
NO previous military experience, but below you make a statement that
would hint that you have been in the military.

What branch or branches of the service were you in?
How long?
Are you still in or what type of dischage did you receive?
What rank were/are you?

BTW - You also appear to be one of those who was always jealous of
reservists.

Remember, it takes more to be a reservist than to be active duty.

Cross-posted to: rec.radio.scanner,rec.radio.scanner

APS105
Bandpass Filter
The APS105 Active Pre Selector is a narrow bandpass filter that is manually, automatically, or remotely tunable from 10MHz-1GHz. The APS105 can be coupled with one of the Optoelectronics Frequency Counters, Frequency Recorders, Nearfield Receivers, or Optocom PC controlled receiver. The results are a dramatic increase in sensitivity (detection or pick-up distance up to ten times greater).

1930. Icom R-10 or Icom PCR-1000 Thoughts?

Hi... I think it would be great to hear local police, fire, cordless phone, etc. in my area. I have read a bit on the web about radio scanners and I talked to someone at radio shack too. It sounds like all the scanners block cordless phone reception. Is this correct? Is it possible to buy an older scanner that does not block the cordless phone reception? Police and fire sound interesting but being able to listen to random conversations would be like the proverbial "fly on the wall". Any info will help.
Thanks - Mark

Check e-bay for older scanners.

Also check your local laws to determine if it's legal to listen to
phone conversations.

*** Usual Disclaimer ***
It is illegal in the US to monitor cordless or cellular telephone
conversations.
*** End Disclaimer ***

Most scanners today have cellular frequencies blocked. Only older
ones that have been modified are capable of picking up cellular
frequencies.

However, most scanners made today can still pick up the 43-47 MHZ and
902-925 MHZ cordless telephone frequencies. No modification to the
scanner is necessary.

>deliver that!

Yes, and the number of states and NGOs that can deliver such
weapons is something to worry about. The more enemies we make,
the higher the chances are that one or more of them will conduct
more terrorist attacks on the U.S. The solution to that is not to
try to maintain control over every 2 bit country and splinter
group on earth. The more we do that, the less secure we become.

But back to the original point- Saddam was not a threat to the
U.S., so the reservists sent to the Gulf were not defending the
U.S. They were enforcing the Pax Americana. You haven't made a
cogent argument countering that yet, unless you count insults.

For scanning, simply get some LMR400 and NType connectors on each ends and an NType Discone like from ICOM.
It's the best you can do without buying an expensive VHF/UHF log periodic, a tower and a rotator motor.

That actually wasn't my question. Looking at the text of the laws, I don't see an exemption that would appear to cover scanning. Yet everyone agrees that scanning is legal. There must be some relevant legal reasoning or precedent that I'm not acquainted with, hence the question.

I agree with your basic point -- the Electronic Communications Privacy Act is an attempt to legislate against the laws of physics. The burden should have been on the cellphones to encrypt their communications. I can see a ban on decryption, but not a ban on reception of signals with a type of modulation that is commonly used for broadcasts and distress calls.

I think you mean "the below" since your quotes are set to appear
below your replies - something that means more work for us (we have to
spend time moving things around to reply).

> Germany (Hitler) was doing the EXACT same thing
> that Saddam was doing. Hitler had taken over
> nearly all of Europe by the time we put a stop
> to him, & 6 years of hell for the survivors &
> countless many who died.

My friend, Saddam didn't have the military power to take over the
Middle East, much less offer any real threat to this country (the only
thing he could possibly threaten was our gas prices - and even that is
questionable). That fact alone brings your entire premise into question.

> I'ld like to see you make that statement to a
> Jewish survivors group.

What the heck does Jewish survivor groups have to do with this? The
discussion was about our military's involvement in the Middle East,
not about Jewish survivors. Second, what statement would you like me
to make to a Jewish survivor group? The statement that you don't
appear to understand European and Middle Eastern history, or the
statement that you don't appear to understand the capability and
resources of Saddam's military? I don't think your apparent lack of
understanding of those issues would be of any interest to a Jewish
survivor group.

Of course it did. The English channel was the primary hurdle that delayed, and eventually prevented, an invasion of England. And there is a lot more water between the US and Iraq than there was between France and England (radically different vessels would be needed).

> & didn't stop Japan from attacking Pearl!
> You seem to forget air planes & boats, they
> can be used to carry war over water.

Japan had the military ships to attack Pearl Harbor. Saddam did not have the naval capability to attack the United States, nor did his country have the transports needed to move personnel in enough numbers to be any real threat to this country. Likewise, Saddam did not have the long range bombers needed to attack the United States, nor did he show any sign of developing that capability.

> In WWII, Germany made large advances into
> Russia. The same could have happened again.

My friend, even without nuclear weapons, Russia's much more modern military would have defeated Saddam's military with the same relative ease that our military did. Add in the nuclear capability of Russia, and that statement is totally absurd.

> That doesn't mean he wouldn't have tried, &
> caused a lot of pain for his & other people.

All we did for the "innocent people of Kuwait" was to replace one dictator with the dictator in power before the Iraqi invasion. Don't hold your breath waiting for "the people" to send a "thank you" note.

> Secondary reason was to see for sure
> Iraq did not have nuclear capabilities,
> which we failed to do... (snip)

We know for a fact that Iraq does not have a nuclear capability, and that they didn't have that capability before the conflict. Some people had suggested they might have been in the early stages of developing that capability, but we had no evidence of that before the conflict (and it has since been ruled out - they cannot be moving nuclear materials around to avoid the inspectors without remote detectors discovering the material).

And I have an equally valid scenario for you; none of that happens.

> In my own personal opinion (AND YES I
> WAS THERE!) We should have finished
> the job, as HE is still in power, and
> stocking up again.

So you believe in killing foreign leaders that you dislike? How does that make you any different than the typical terrorist or assassin, or this country any different than the typical terrorist country? And

what effect would Saddam's death have on the stability of the Middle East? How would our relations with the other Middle Eastern countries go if we started assassinating the leaders of those countries? For that matter, how would relations with any other country go if we started assassinating foreign leaders whenever we felt like it? It's easy to advocate murder when you don't have to be responsible for the wide spread consequences, my friend.

> In the end, YES we did the right thing
> by pulling ALL the forces to push the
> ass back to Iraq.

Yes, I believe we did.

> NO we did not meet much resistance, but
> that was because WE (All the forces involved)
> fought this fight correctly, and with
> minimal casualties. Starve their forces,
> and prevent communication is what won that
> war, (snip)

Lets not pat ourselves on the back too hard. What won that war was the simple fact that we had the more modern military - nothing more, nothing less. The tactics used would not have worked against a more modern adversary. For example, a country with satellite capability would have had a better picture of our troop movements and deployment strategies. Likewise, a country with more modern weapons would have wiped out our troops as they were getting off the ships and planes (if they would have even allowed the ships and planes to get that far).

> the wall". Any info will help.

Actually, most personal telephone conversations are pretty boring. There is
a certain allure to listen to a conversation which a person is not s'posed
to but the conversations themselves -- for the most part -- arent
particularly interesting. Listening to the drive-in window at the local
McDonalds would likely be more interesting.

Police, fire, emergency medical response, security and the like is where the
action is. Its a great hobby and a lot of fun. Welcome aboard!

TV antenna cable (75 ohm) is cheap and should work well.

Hi Mark,
The laws say that it is Illegal to listen to both cellphone and
cordless phones.I am not a lawyer,but you might want to research
your county,state,and US laws. This site just worked for me:
http://www.afn.org/~afn09444/scanlaws/ You might want to start
there, and do a little more reading elsewhere,about the
Electronic Communications Privacy Act .Try this site:
http://www.digitalcentury.com/encyclo/update/ecpa.html

Hey it's your life,you get to decide what risk you want to
take with it.
May you forever be free.

>
> LARRY :-)

Do yourself a favour and get the TenTec RX320 or someting like a used NRD-525 for shortwave-listening instead of the PCR1000.
The PCR100 is comparable with the Sony 2010 (2001D in europe) in performance. So its just a basic shortwave-machine compared with a NRD-525.

For scanning on higher freqs there are lots of much faster machines.

hth,
odo

Most Scanners will work the 47/49 MHz Cordless Phone Range, I know of none that block these Frequencies as they are used by Walkie Talkies and are near some Ham Bands and other Services.

As a note on Cordless Phone Calls; it is illegal in the US to listen to them, and is just as illegal as climbing a Phone Pole and wiring into someone elses Phone Line.

What is blocked on Current Scanners is Cellular Phone Frequencies, which live in the 844-849 MHz Range; this was mandated by US Law a few years back. The Law (ECPA) prohibits the following: Manufacture of Cell Able Scanners, Import and Modification of same.

As a technical note on Cordless Phones both 47/49 and the newer 900 MHz ones, the range of the signal is quite short; about 2 blocks.

I can understand the curious nature of being able to hear peoples calls, but with so much more to hear: Police, Fire, EMS, Feds. NASA, Military and Civilian Air, FRS, HAM, GMRS...
the content of Phone Calls is moot.

See the following Sites for what and how you can tune in to the real fun stuff:

http://www.strongsignals.net
(New to Scanning Info, Reviews, News and more)

http://www.cityfreq.com/
(US City Frequency Lists)

http://www.911scanner.8m.com/
Frequency Lists

http://www.bearcat1.com/free.htm
Police 10-Codes and Frequencies

http://www.trunkscanner.com/
Trunked Radio Information

http://www.indirect.com/www/sxi/shuttle.htm
NASA/Shuttle Frequencies

This is just an intro, there is a whole world of legal to monitor communications on the air.

Also, next trip to Radio Shack, get a copy of Police Call+ which lists frequencies by State and provides background on Scanning.

More so you should look to use guy wires to secure it, depending on how long
the bolts you use on the roof itself may dictate a piece of wood on the inside
to prevent it from moving around and will provide a solid base.

Roof type?

>

The shorter the Coax the better, where your station is in relationto the
Antenna will be the big factor.

Best idea is to establish where the equipment will be and see how you will
route the Coax, and by all means try to avoid things that may cause line noise
(Cable TV Coax, AC Units, Power Wires, Lights)

Plan the project out first.
>

I own one and I had no problems. You cannot do any modifications to it but in my case, since I use it when I am mobile, it does not matter. There are no computer ports for computer aid scanning either. So you will have to manually enter the freq's.

If you want to modify it I would recoomend not to buy. If no mods are required go for it!

Hope this helps!

Provided the Communications are not Encrypted, Scrambled or Coded, Remote TV pickups or Phones then you can monitor; some jurisdictions do regulate beyond this by way of mobile use of Scanners.

The law says that even if you can legally listen it;

Keep what you hear to yourself

Do not use what you hear to break a law

Dont make money with what you hear

In general, if it is not a Phone Call or Encrypted then it is legal.

I am not a Lawyer but I can provide a few Links that may help on this issue:

Depending on the Frequency and Power of the Radio it can be from 6 inches to 2 feet, not much beyond that.

The "problem" with Counters is that the Air is filled with activity that is often stronger than the one you want to catch.

In general, Counters work at very close range and when you know the close proximity of the Frequency to start with.

Depending on what you are attempting to do there may be other routes to finding a specific frequency without a Counter; the FCC has a product ID Number Search which lets you imput the ID # and will give you the actual frequency or range used, the book Police call+ from Radio Shack lists Frequencies by State down to the city and also provides Service Frequencies.

Sometimes you can just ask a Tech. what frequency an item runs on.

Perfect, Polite and a Positively Correct Response to this issue.

I agree with the points you made 100%.

The subtle subterfuge engaged in when marketing these "full coverage" Scanners
by a "Dealer" leaves much to be desired and when done so blatantly can only
lead me to believe that this is a blow to the hobby of Scanning.

Source record: 62787

I have an IC-T81A Quad band(6m-2m-440-1.2ghz)HT that I have
modified to have very wide recieve,not a harware mod but just alot of button
pushes.
I was scanning the 700mhz FM band and it was very active with what
appeared to be cell phone traffic?I also heard what seemed to be police and
some public service-all the signals had what seemed to be a digital
squelch,the majority were full duplex but some were just simplex.
Are these just images from the cell transmitters-handsets or is
700mhz allocated to cellular?I am not familiar with the allocation of
500-600-700mhz bands and the IC-T81A scans these and many more.
Thanks in advance for any information that you can provide.

There's no way to guy a bicone, and there will be no mast to guy. The
tripod will simply have to be strong enough. If you've seen a bicone,
you'll know that the guys would interfere with the lower cone.

Eric, how big, heavy and what's the wind area of this Bicone?

Glen Martin makes some very good roof towers but we might be talking
overkill here. :-)

http://www.glenmartin.com/catalog/page14.html

I have been using the RT-832 for about 8 or 10 years now and am
really pleased with it. The RT-424 with a mast (no guys) would get you
up about 10 feet over the peak.

I mounted the roof tower with lag screws through the roof into a
length of 2 X 8 mounted inside the attic, against the underside of the
roof between the rafters.
IOW I mounted a 2X8 between the rafters and secured into the rafters
for each tripod leg. Fill the pilot holes for the lag screws with
silicone sealer before inserting screw and then I like to seal the
head and washer with a giant glob.

This has held up to a 20-15-10 tri-band beam and a KLM log periodic
beam without guys.

The tower weighed 30 lbs and two of us easily mounted it. Took three
of us to get the antennas up though!

The smaller one might just do the trick for you, it will last forever
unlike the steel bent tube job RS sells.

1976. Re: Best Coax cable for a base Scanner

Newsgroup: rec.radio.scanner
Date: 2001-07-16 20:13:23 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <3B534AE3.35FA5439@dialpoint.net>
Source record: 62796
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Never ask for the best because you will get an answer like use LMR 900
or even bigger .That coax is about 7/8 inch in diameter and is overkill.

The rg-6 is good for the 50 feet you are going and the cost is not too
much. Don't go with the triple and quad shielded stuff unless the price
is right as it will be no beter than the single shielded stuff. It is
70 ohm coax instead of 50 ohm stuff, but that is no problem for
receiving as the scanner will not be 50 ohms over the whole range
anyway.

RG-8 or RG-11 is fine also if you don't mind the 1/2 inch cable at a
higher price.

While you could use the rg-58 or 59 it is about the same price as the
rg-6 and has much more loss.

I don't think it was as much of a problem, as some hyped it up to be. The corruption typically occurred when a programmer-wanabe sent the wrong commands to the EPROM. I guess they had to take it out on somebody.

If you use it as intended, and/or use some of the more established third-party software with it, it's very unlikely you will ever encounter any problems.

I just bought a PRO-2050 trunk scanner and be dammed if I can figure out how to program the trunked system area. I am in Ottawa, Ontario, Canada and I found a site with some local truck frequesncies, which I entered in bank 1 and tried the scan with no results at all.

Can any one help me with some trucked freqs and how to enter them so that I can see if the scanner works and them maybe I will be able to figure out how to enter them int he future.

Also, is it worth keeping the pro-2050 or should I be looking at some other model?

Thanks for any help you can provide.

He's asking about the stubby antennas used when scanning at races.
Mostly 400 MHz band, some 150 MHz, and maybe a couple at 800 MHz.

The stubbies cut down on sensitivity, so as to reduce bleed-over from
one frequency to another. I sprang for one for $12 because the
broadcast feeds at Indianapolis were overwhelming other channels.

I'd love to find out what's inside them, 'cause I'd rather not pay $12
if I ever need another one. But I can't bring myself to cut the
little guy open for a look-see.

Is there any sort of add-on for the PRO-2006 that supports alpha tags (I hope I'm using that correctly--I mean the short description that can be associated with a frequency, such as the 780XLT does)? I'd be willing (happy maybe?) to accept something that required computer control, but a self-contained add-on would be really nice.

Thanks.

I found my old Bearcat scanner at a garage sale for ONE DOLLAR. And it works just great. (I figured for that price, even if it didn't work, I could use it for parts.) I recommend scrounging around in pawn shops, thrift shops, old electronics stores, and of course garage sales.

Drop by your local airport and buy an aviation map for your area. It contains all the frequencies that pilots, airports, control towers, etc., use and are often interesting to listen to. Any scanner can pick these up.

You can also use a scanner to listen to your local ham radio repeaters. These are often good sources of information during severe weather, as many hams are excellent storm spotters and you can track thunderstorms this way. You don't have to be a ham to listen.

I'm fairly new to the hobby and have been enjoying a recently purchased PRO-92 handheld. I've been using the stock rubber duck and would like to start trying some new antennas to see if I can improve reception.

I would like to ask for your recommendations for 3 different handheld antennas:

1) Best antenna for 30-50 range
2) Best antenna for 800 range
3) Best antenna for wide coverage (30-960)

IMPORTANT NOTE: I understand that there are many gurus on here that will tell me to "just build a simple one using..." or something similar. Please understand that for now I prefer to PURCHASE an already made antenna that I can simply screw on to the top of my handheld. I do not want to BUILD anything at this point.

I'm also not looking for an outdoor antenna or mobile antenna. Just something I can simply screw in the top that would help my reception for the above ranges I mentioned. Best case scenario would be for me to be able to walk into a store (Radio Shack, whatever) and ask for part no. whatever based on your wise recommendations.

Thanks for your help,
Jay

Usually a coil of copper wire (perhaps 20 gauge or so) that, if stretched
out, would probably amount to a 1/4 wave antenna.

Or you could be seeing 800MHz-band radios if the antenna is about 3" long...

2010. Telescoping Antennas

Newsgroup: rec.radio.scanner
Date: 2001-07-17 02:39:38 UTC
From: jsaspo@attglobal.net
Message-ID: <420d12ed.0107161839.3ae7c6f6@posting.google.com>
Source record: 62720

Gurus,

With a telescoping antenna do you basically fully extend it when trying to hear the low MHz ranges and then compress it as you move up in MHz?

For example, fully extended for 30-50 and fully compressed for 800-900? Is that the general idea?

Sorry for the dumb question. I'm fairly new to this stuff. I see a lot of "cut it to so-and-so length for best reception in this range". I prefer not to cut anything, so would a telescoping antenna be the best choice for my handheld scanner for wide coverage? Can you recommend one for a PRO-92?

Thanks for your help,
Jay

Then go into yur local Radio Shack store and ask for Cat. No.20-006.

It is a center-loaded telescoping whip antenna. Cost is $9.95
Its a good antenna at a great price.

Youmust mean something like when our new data geek decided to schollus grunts in the "internet".
It was a long long time ago, time flies and all of that.
Something had happened in the White House, so MR DataGeek decided to show us how to keep current on the news.
He typed the url http://whitehouse

Then turned to face us and spent 30 minutes of irreplaceable time boring us with the wondrs of the 'net. Yawn. Most of us had been using the net for a long time.
But the images on the monitor were a sight to behold. Whitehouse.com is(or at that time was) a soft poron site. Lots of "bare naked ladies". It was scream, at least until our boss walked in an wanted to knwo whateh naked ladies where all about. Mr Boss was (likly still is) a rather prim and proper conservative Christian (nut case) and lost his cool over the "blatent pornography". I guess he had never seen a "bare naked lady".
Mr. DataGeek lasted less than a month.
I doubt if "cyber patrol" or any watchdog/nanny program will prevent young delicate eyes from seeing "bare naked ladies", or darn near anything else.
Of course the ads in todays Womens magazines would have caused my mother to blush. Or maybe not.

Well, it stands about 3 1/2 feet tall total and probably doesn't
weigh more than 10 pounds. 16 elements. Here is a picture to
give you an idea of the configuration (this is the one I have):

http://www.radio-ware.com/products/ant426.htm

No info in the package as to weight or wind loading.

> Glen Martin makes some very good roof towers but we might be talking

> http://www.glenmartin.com/catalog/page14.html

Definite overkill. I can sit just up at the peak... even a Rat-Shack
tripod would be okay for me, *if* it can handle the wind load. But
I'm more concerned about the thing tearing loose from the roof.

> I mounted the roof tower with lag screws through the roof into a

Well, I suppose there is something to be said for overkill,
but this is probably best described as the wind load of two
heavy-duty... discones.

Eric

> With a telescoping antenna do you basically fully extend it when
> trying to hear the low MHz ranges and then compress it as you move up
> in MHz?

Yes. Best performance is usually 1/4 or 3/4 of the wavelength, where the wavelength = 300 meters divided by freq. in MHz.

Thus the wavelength of 150 MHz is 2 meters = 79 inches, and 1/4 wavelength = just shy of 20 inches.

This is also 3/4 wavelength at 450 MHz.

Actual results differ just a little because of the effect of inductance and capacitance in the radio front end circuits and metal in the vicinity. But 1/4 or 3/4 wavelength is usually a good starting point.

I find a telescoping antenna very useful. Radio Shack sells one.

Falcon - There are many search engines on the internet. Use one of them and
type in,, well "sunspot" for starters... Also try typing in "Solar Cycle"
and other related headings. You will learn much.....

In basic, the sun has cycles, approx every 11 years, where is seems to have
massive eruptions from deep within. These eruptions always happen but about
every 11 years or so the cycle goes from "very few" to "many" eruptions per
day. The suns surface temperature gets is a little cooler where these
eruptions burst through because believe it or not,, deep under the surface,
its actually a bit cooler than "at" or "near" the surface,, and to those
who watch them, they appear to be like little black dots in the suns
surface because of the temperature difference to the surrounding hot gasses
=> hence the term "Sunspots"...

Each of these eruptions generates a huge amount of its gasses, called solar
flares, which shoot off into space. Some of them can get up to one or two
million miles long and because the sun is like a huge nulcear reactor,
these solar flares carry with them huge amounts of charged particles which
travel outward - probably never stopping until they hit something. IF that
"something" happens to be the Earth's atmosphere, then it too will charge
up, depending on just how big/strong the solar flare was. These "chargings"
can cause radio blackouts in some areas and can enhance radio
communications in others by not allowing certain levels of the atmosphere
to absorb the radio tramsission and actually reflecting it back downward.
If virtually the whole atmosphere becomes charged in this manner,, then
radio signals can bounce around the earth several times over, especially on
HF frequencies. Hams the world over, take advantage of this phenomena.
They also cause multitudes of other problems to electronics and
communications on Earth by overloading circuits etc and virtually X-raying
some circuits to death. They also cause the "Northern Lights" to light up
as these streams of particles bounce off and through the atmosphere,
charging it as it passes through.

This charging phenomena is identical to the plastic comb being rubbed over
a nylon shirt or pullover. It robs electrons from Peter to pay Paul. Only

Peter wants them back and becomes charged up and goes looking for them. When you wave the comb over your hair and your hair stands up, it's because Peter is trying to pull the back the lost electrons, only with Solar Flares, this happens on a gigantic scale and we (all human life) are on one of those electrons, in the grand scheme of things.

I am sure you will find much, much more than I can even begin to explain in a few sentences. Some people write many books to try to explain this event in great detail.
In my opinion, this whole thing on Solar Flares and the suns huge amount of power and energy, makes me feel like a very small and insignificant part of the universe. A single huge eruption in the sun could actually wipe out all life on this planet in a few heated seconds, if not from the actual heat, then from massive doses of X-rays, Gamma rays and the like... if mother nature decided to get cruel to us.

Go forth and investigate, Falcon. This is a fascinating subject.

Then mount it similar to the way I describe below if that makes sense.
It was the way Martin suggested for their roof towers.

If you aren't concerned about height, I imagine the RS tripod would work with the above mounting technique. I always try and get my scanner antennas as high as possible. It all depends on you location and what you are trying to hear.

I never said I didn't know who they are!! I assume with the names you
have thrown around that you are referring to "Carl Von" Clauswitz, the
Napoleonic soldier; "General" Von Stuben of the Prussian military; and
Sun Tzu "The Art of War"??

BTW - that saying is alligator mouth and "CANARY BIRD" ass.

You would do well to follow your own advice. If you want to play
in this sand box you're gonna need a much bigger shovel! Remember,
a lot of us have studied these issues & sacrificed to maintain the
liberty of our country.

I made one to do the same thing. I took a BNC connector and attached a one-inch piece of wire to the center connector. I put the little insulator cover on the bare wire to potect it. I used it last week at Lowe's in Charlotte, NC and it worked great with my Pro-91. I had tried a normal 150 antenna and a short stubby 2-meter antenna with no luck. I was getting excessive bleeding of freqs. I had seen the short stubbys you can buy for $12.95 and thought I try making a one inch job myself. Works great. I had also tried no antenna but that was not receiving well enough.

I don't think Saddam has the capability to develop biological
weapons that would work well - that would not threaten his own
military, and himself, as much as his enemy. And, no, I would not want
him to use them. However, I seen no evidence that he would (even he is
smarter than that).

I have always considered the standard "duckies" that came
with my hand held Uniden scanners (BC200XLT and BC2500XLT)
to be "sub-par".

What is the best after-market antenna that will boost reception
over all bands on hand helds, especially 800 MHz plus? (And who
sells it?)

Thanks

I heard on chester Counties VHF dispatch freq. (160.185), certain companies are starting to use their 800 system on July 17, 2001. Is their 800 voice or digital?

If anyone knows how the county is sectioned on the frequency usage, it would be appreciated.

I'm primarily interested in Southern Chester County, fire & police.

Thanks in advance

I find that using the Radio Shack center-loaded telescoping whip ($9.95) works great on my scanners anywhere from shortwave to UHF without adjusting the length. While this is less than ideal, the performance is far better than the stock antenna on the handhelds.

Well, since I have an unobstructed view of the Continental Divide, I
think the height issue is already addressed by default. I just want
it clear of the house and ground level obstructions.

Thanks for the info!

Eric

You are asking a lot... To get the best reception for 30-50 miles,
you should put up an outdoor antenna. Plus for wide coverage from
30-960 MHZ, you need a discone which is too big to mount on top of
your handheld.

That said, I think the best thing you could use would be a telescoping
whip antenna. Just collapse it for 800 mHz, and you can extend it for
whatever band you want to monitor. But as for receiving range, height
is what you need. So unless you live on the top floor of an apartment
building, I'd put up an external antenna. It's a must.

Tom

Well after being a HAM for 12 years now, I come to the conclusion, with plenty of experience and experimenting, that the only way to boost the reception on a handheld on ALL BANDS is to have a separate antenna for each band, a triplexer, and high grade coax. Too much hassle, you say? Yes it is. BUT! I also have found that ELEVATION plays a BIG PART too! I use a 30 channel Bearcat scanner with STOCK ANTENNA. I live on a hill in NORTH PROVIDENCE, RI and my reception from up there, which is about maybe 200' above sea level, is phenomenal. You will never find the perfect antenna. NO antenna is going to perform well on ALL BANDS! An antenna has to be designed/cut to the proper frequency range to perform well in that range. ALL_BAND antennas are a compromise. You want good UHF reception? You can get a commercial UHF vertical and it will perform great, on UHF!!!! It will give lousey performance in the VHF range! With handhelds you are at a disadvantage, cause you HAVE to use a rubber duck if you want portability. Some handhelds overload VERY SEVERLY when connected to outside antenna. There doesnt exist a "BEST" antenna for a handheld. You could get a collapsible 1/4 wave whip, and adjust its length according to the band you want to hear. It will work great on vhf when fully extended. but not too well on the higher bands [uhf] . And to make things worse, most scanners sold to general public, [consumer grade] are poorly designed with lame front ends. I put my bearcat scanner on a distant, weak weather freq. and next to it my ham radio handheld, tuned to the same freq. The ham radio handheld OUTHEARED the scanner hands down! The weather channel on the scanner was full of static and noise, where on the ham radio, the station came in with a good, much less noisy signal. Ham radio and commercial gear are built much better and have much better selectivity and sensitivity. As a matter of fact, one of my friends will only use commercial gear to monitor. He wasnt satisfied with the weak audio, and lame reception quality of a scanner. Well i have rambled on long enuff. If you could have every handheld antenna ever made and compared them all SIDE BY SIDE, you would'nt be able to tell much of a difference. Hand held rubber ducks are ot the proper length for the frequencies they are supposed to recieve. And you cant expect a duck, 6" long to adequatly recieve frequencies from 30mhz all the way up to 800mhz. It just isnt going to happen. Those ducks are optimized for vhf. and work ok for a little way on either side of that band. I think it is kind of stupid for manufacturers to include 800 mhz on a scanner cause you really need a HIGH GAIN antenna for that band. the wimpy antenna that comes with the scanner is just no good for such a high frequency! It will perform well if you live in the city, or not far from an 800 mhz cell tower. but dont expect to hear the local police 2 towns over with a perfect signal. You could mount a cell phone antenna on the metal case top of a scanner and connect a short length of coax to the existing antenna terminals. I did that with my bearcat 895 using a loaded high gain ham radio antenna. It out performs any indoor antenna or duck, or whip i ever used. It does look funny, but it

kicks butt! UHF and 800 mhz requires a very small ground plane to work, so the top of a bearcat 895xlt case is great! if i want to use the high gain antenna for some other thing, i simply unscrew it and pop the little whip back in the back of set! Both antennas are terminated to the same connector. whew ok i am tired! bob

Source record: 62654

Frequency counters are near field receivers. They will simply display the strongest signal in your local vicinity.

Actually, my radio shack counter (designed by GRE) works better than any other counter I've tried, including opto and startec counters, except for the opto explorer. I've done side by side tests. The other counters lost the signal at 10-30 feet, the radio shack counter worked out to about 200 yards, with a 5 watt UHF handheld. (urban environment w/other nearby transmitters). It has no features, other than a great display and backlight and it runs on AA's, but it terms of performance, it's the best.

The reason there's so much dispute about counters is that using them is something of an art. A few hints:

1. Catch your target in a low noise environment. Indoors works better outdoors. Underground (parking garages!) works better than indoors. Rural works better than urban. Having high power transmitters operating nearby makes counter work almost impossible.

2. Beware of dual frequency systems like repeaters. Having two transmitters going at similar distances/powers on two different frequencies will only confuse the counter. This is why most counters don't work on cordless phones... when you try to use them you are getting both the base freq and the handset freq at the same time.

3. Low power transmitters like cordless phones are very difficult to read at all. Usually takes about at least 100 milliwatts to tripp off most counters. My counters wont read my garage remote or car remote at all.

4. Most counters will only detect FM signals. Notable exception is the Opto Explorer which works very well on AM signals. Opto used to make an AM-only counter, wish they still did. My R/S counter has read planes at Ohare, but I was standing at the gate about 20 feet from the aircraft at the time. Even then, it's touchy.

5. Use a good antenna. I'd suggest a telescoping whip or gain duck. Better yet, use a gain antenna for the paricular band of interest, when you can take a guess at what general range your target is in. Dont hook it up to a big outside antenna and expect to read every signal for miles. In most environments the counter will become hopelessly confused by the dozens/hundreds/thousands of different active frequencies.

6. Consider an FM broadcast station blocking filter (FM Trap) in line with the antenna. FM broadcast stations are almost everywhere. They create a high background noise level for the counter to work against.

7. Dont put a counter right up next to a high power transmitter, you may damage it.

Some distances:

-Travelling down a rural highway with an opto scout (no filter) on a mag mount antenna (19 inches) on the roof of the van:
FM Broadcast Station in next town: 2 to 12 miles, depending on station
Public Safety Base Tower Transmitter VHF: 2 Miles
100 watt VHF Fire Mobile: 1.25 miles
5 watt uhf portable: about 200 yards
800 Mhz cell phone mobile: about 100 feet
1/2 watt mobile extender, VHF: about 75 feet
In some small towns the local FM broadcast station was so strong we couldn't read a thing.

-R/S counter w/whip antenna, handheld in urban location:
UHF 20 watt repeater station at 300 feet: 1/3 mile, in view of site
UHF 2 watt handheld: about 40 yards outdoors
VHF 110 watt fire mobile: about 200 yards, about 10 yards right through a brick wall.

-R/S counter w/gain rubber duck, open field in rural forest:
250 milliwatt UHF ham ht: 200 yards and still reading, got tired of walking
150 milliwatt FRS radio: about 20 feet

-Sitting in parked van, downtown urban riverfront outdoor parking lot, target is cell phone user (handheld - 800 Mhz) sitting in adjacent car. Both counters sitting in my lap with gain rubber ducks:
Opto scout: no read
R/S counter: read

-Opto explorer, Chicago downtown lakefront, 3/4 mile from several hundred highpower transmitters, including high definition TV sites, telecoping whip closed to about 9 inches:
FRS radios (250 milliwatts) : 3 feet
VHF 5 Watt Handhelds: 10-15 feet
UHF 5 Watt Handhelds: 5-10 Feet
800 Mhz trunked handhelds (Styx Moto's): 30 feet
AH-64 Apache Helicopters UHF AM: 200 yards
VHF Aero (AM) Temporary Base Station: 20 feet
Note: reading anything was very difficult using any of the counters we had due to incredibly high background noise level. Usually took several attempts. Reading tons of "trash" in lower 1/4 of 900 Mhz band and elsewhere.

-R/S counter indoor suburban shopping mall, gain duck:
2 watt uhf handheld: about 25 feet, counter getting confused by co-located UHF interstitial site transmitter for same operation. 462.1125 / 467.1125. Took several tries. In a downtown indoor mall w/similar operation couldnt read a thing.

-Opto pager style counter w/small whip antenna, on street in downtown chicago:

UHF portables: 2-4 feet
Indoor heavy buildings - UHF Portables: 10-15 feet

-R/S counter w/19 inch mag mount whip on roof of car driving around lots and drives at OHare Airport (very high background noise level):
UHF and 800 Mhz portables and mobiles: 10-20 feet
VHF 110 watt fire mobiles: about 75 yards
Unable to read much else, including a number of small base stations and fixed control stations due to noise level. Walking through terminals indoors w/same counter and gain duck reading is still difficult, getting UHF and 800 Mhz portables from 20-100 feet.

-Counter built into new Alinco high-end scanner, inside suburban restaurant hall: getting reliable reads on 2 watt uhf portables from across the room out to about 100 feet or more. Read 50 milliwatt vhf wireless mike at about 2 or 3 feet.

So you see, it's not so much the counter as how you use them. Takes some knowledge and a lot of practice to put them to good use. The main reason I prefer the R/S counter is that it works better for me in high background noise level environments and seems to be bothered less by FM broadcast stations. I now own a scout and I love it. Works good for general freq hunting and special events. Great set of features. But when it's a critical, specific target I'm after I bring the R/S counter. I was very impressed with the opto explorer I got to use, but it's very expensive and fairly complex, once it's set up the way you want it, it works great.

To have fun with a counter, you have to take it out in the field and go hunt your target down. Can't do it sitting at home unless your neighbor's house is on fire!

2039. FA:Uniden BC895XLT TrunkTracker Base/Mobile Scanner

Newsgroup: rec.radio.scanner
Date: 2001-07-17 14:14:39 UTC
From: kf5oj@bellsouth.net
Message-ID: <3b54482f.2718703@news1.lig.bellsouth.net>
Source record: 62656

FA:Uniden BC895XLT TrunkTracker Base/Mobile Scanner
Trunktracks Motorola type I, II and IIi systems.
300 Channels, 12 BAND COVERAGE that includes 800 MHZ & AIRCRAFT.
ONE TOUCH WEATHER, TRIPLE CONVERSION, AUXILIARY TAPE OUTPUTS
TRUNK SCAN AND SEARCH, TURBO SCAN, PROGRAMMABLE SEARCH
TRUNK DELAY, TRUNK LOCKOUT and VFO CONTROL KNOB
Includes Serial cable adapter, Box, Manual and all accessories. In
extremly good condition. Buyer pays actual shipping costs. Payment via
Paypal, Cashiers check or Money order.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1256311619

Thanks

2040. Re: What's The Best After Market Antenna For Hand Held Scanners?

I use a AOR 8000 with a telescopic whip. I receive the police on 800MHZ 3
and even 4 towns away (40 miles) like they're sitting next to me.
I agree, of course with your comments regarding antennae but am sure glad
that AOR didn't think it stupid to make my scanner 33KHZ-1.9GHZ continuous
(UK version - non-blocked).

We know that there is no such thing as the "perfect" antenna for all bands.
I think what the original post was asking was your opinion on the best
compromise.
I too would like your opinion on this. Also, for really asking the
impossible, what about a decent indoor antenna?

Thanks,
Alan.

Thanks Bill.

I use TalkPCR with my PCR100 and noticed it has an eeprom backup feature for use with the PCR1000.

No intention on hacking the PCR1000, it has what I need out of the box, especially if I use TalkPCR with it.

Dave,

Can you provide some more info regarding this? Does that mean in the 92 I
can't group all the fire freqs in one bank, police in another? etc??? I
really like the idea of alpha tags, but organization is even more important
to me.

Thanks, Pizza Man

The Pro-2050 will only work Motorola Systems, it can switch between types; one is preset by default but this can be changed.

Follow the Link:
http://support.tandy.com/support_electronics/44544.htm

to the Online Pro-2050 Manual, click Trunking which should explain it further.

With the lack of ability to track other Systems, the Pro-2050 does have shortfalls, but if you only Scan Motorola Types then it is a good unit.

Most likely images, as the 700 MHz Range is for UHF TV:

500.000 is UHF Ch. 19

602.000 to 608.000 is UHF Ch. 36

698.000-704.000 is UHF Ch. 52

794.000-800.000 is UHF Ch. 68

Though I heard this will change in time with new assignments by the FCC.

See the following Link for the US Bandplan:
http://www.cc.columbia.edu/~fuat/cuarc/fcc-bandplan.html

Hope this helps,

Indeed, as with the new Pager Incident Services and such, I just think it is bad practice to run on about this and that which you heard on the Air; people outside the Hobby, some Cops and others have little or no idea of what you are permited to Scan, therefore I tend to stick to the "Keep it to yourself" rule.

You can organize the Conventional (non-trunked) Frequencies in
whatever manner works for you. All FD in one bank, all PD in another,
all EMT in a third, if that is what you desire.

For trunked systems, each SYSTEM must be in one bank. You cannot mix
different systems in the same bank. This applies to any trunktracking
scanner.

2049. Gounding of Outdoor Scanner Antenna

Newsgroup: rec.radio.scanner
Date: 2001-07-17 17:47:11 UTC
From: av8tor@licensed4fun.com
Message-ID: <zS_47.263$_Y2.46813218@newssvr17.news.prodigy.com>
Source record: 62666

I'm just about to put up a 30' antenna mast and was wondering about grounding.
The only ground rods I've been able to find at the local stores are 5' long.
I was wondering if 5' is long enough. Also, would it help if I put in 2 or
three 5' rods around the mast, would this improve lighting protection?

The reason I'm worried is that I'm sure this antenna will be hit by lighting as
it will be the heights object in the area and we live in Florida, the lighting
capital of the world!

Thanks,
George

Florida terrain is mostly FLAT and you probably won't notice any difference in mounting your antenna LOWER than 30'. As for grounding, you really don't need any more than 1 grounding rod. The soil in florida i would guess is mostly sand so a chemical ground would be in order. Just dig a hole for your mast and get some rock salt and dump a bag of it in the hole and flood with water every now and then. That will make earth more conductive. Of course fill hole back in with sand! I lived in an area in Rhode Island, a sub-development and it was a sandy area. I used an 8' grounding rod and made a pit where rod stuck out of ground. I filled the pit with dirt and rock salt and watered it every few days, keeping ground moist. It does help with getting a good RF ground for the radios. My equipment was grounded using 1" copper braid. Just pray in addition, for the lightning protection! bob

Hi Alan, Something that comes into play with radio signals is the conductivity of the ground. The northeast USA has rocky soil and not a good conductor. So we have lame 800mhz reception, but not many agencies are on that band here, except for the state highway and state prison and various companies here in rhode island. The midwest has nice, moist fertile soil, so radio signals follow a ground path much better. The best path is salt water. Thats why boats can hear other boats from extremely long distances. Salt water is 6000 times more conductive than fresh water!!! Its true!
Well a decent indoor antenna could be a J-pole made from flat TV wire. You could make 2, one cut for uhf and the other for vhf and connect the coax to small jumpers from the antennas feedpoints. I use a permanent mount dual band ant [ham] with GAIN that is mounted to the top of my bearcat 895. It works very well. It is funny looking, with the loading coil but it is small, about 2 1/2' long and pulls in the stations. bob

2053. New Scanner - Hookup Question

Hello,
I just purchased a Uniden BC780XLT. Is there a problem with hooking up the speaker output to a mono to stereo adapter and then connect to right and left line in's on my stereo amplifier? I know that usually it is wrong to connect speaker out levels to line in levels, but would it actually cause any problems?

I can't use the Tape Out connector because the 780 has to be designated for each channel to output to that Tape Out connection. Alot more work to mark each channel as "Line" for outputting to the Tape out connector.

Any comments?

Thanks,
a2stepper38@hotmail.com

Depends on what you have now. those dinky scanner antennas are dinky for a reason. Smaller element lengths for shorter
wavelenths which police, fire and companies use.
For shortwave I think a CB antenna would be pretty good but not VHF/UHF.

Do you have a local home depot or Leows hardware store?
They sell 8' groundrods.
Also, some payless cashways sell 10' by 1" groundrods though I think
all Payless Cashways are gone out of business now.
If you have a local GrayBar electronics (grey or gray?) then they have monster
groundrods up to 12' I think.

It would work for low band 30-50, but not so good for anything higher.

I would recommend the Austin Condor rubber duckie. It's a solid all around antenna, and is excellent with 800 MHz. It's a bit large and a tad expensive ($30). As far as value is concerned, the Radio Shack 20-006 telescoping whip has performed fairly well for me. It's only $10.

I have the 780xlt as well, but the stuff you're listening to is not sent as stereo but, to answer your question - no, it will not be a problem. My suggestion is to get a decent computer control program for the 780. I like TrunkTracker780 www.scanstar.com for details on this.

Hi Bob,
thanks for the info. I shall try that. You obviously know what you
are doing where antennae are concerned.
Funny enough, I did know about the salt water/fresh water conductivity. It
is one of the things I remember from my college days (HNC in electronics).
PURE water is actually an INSULATOR! It is only the impurities in water that
make it conduct so well.

Thanks again for the info.

Alan.

I'm sorry Tom. I wasn't clear. I meant the 30-50 MHz range
(VHF-lo?), not 30-50 miles.

Anyway, the telescoping whip is exactly what I intend to try.

Thanks,
Jay

As one person made the comment to use rock salt. NOT a good
move. Salt contaminates the water source of people with wells.
The salt will also eat the ground rod up over time. The more
salt and moisture, the less time it will take.

A better chemical to use is the chemical treatment compound that
several companies sell for grounding improvement. It is
environmentally friendly. It actually gets better over time.
Think one type is called Bentonite.

Next comment is about multiple grounding rods. That all depends
on the ground resistance. In sandy soil, you may have to go
deeper than the normal 8 or 10 foot ground rod. They make the
kind that has screw sections with a coupler. Just put two or
more together and keep driving. You just need a tall ladder to
ge able to get to the top of the next added section.

One point to remember is that there is a cone of influence around
the ground rod. It is equal to the length. If you place the
ground rods closer than their length, you are within that cone.
You will not get the maximum use out of the soil resistance if
they are placed closer. The cones will overlap and you will
loose that soil resistance within the cone. Also if you take a
lightning hit, the high current needs that large soil area to
dissipate the charge.

It is best to "Cad Weld" (TM of Harger), exothermic welding, to
make the connections. This way you have the lowest resistance in
the connection. It won't change over time or with vibration.

I kind of got long winded, but it may help you understand
grounding a little better.

You might want to back up the EPROM "just in case".
A friend's PCR1000 dumped its RPOM while using Icoms's sorry software.
He had a quick dip in the AC and after the power went up and down several
times, his '1000 was "ill" on reboot.
He had the data backuped up, so no big deal.

2076. Scanner help for a Ham ??

Newsgroup: rec.radio.scanner
Date: 2001-07-18 00:56:10 UTC
From: cathexis@erols.com
Message-ID: <3b54d68d.1040085512@news.erols.com>
Source record: 62691

Greetings,

I used that subject title 'cause I know so many Hams think they're superior to Scanner-buffs. I am a Gen. class ham (about 1 year) but I still respect scanning and as all my airtime is in the HF I'd like to ask the ng a scanner question. I don't want to get flamed, but I'll just give what I'd *like* to do and maybe you could tell me if it's possible and with what rigs, etc. If it's not possible tell me how close I can get. I know very little about scanning.

What I'd like is a hand-held scanner that I can use to do everything ! Well, actually what I'd like to do is sit out on my porch and listen to talk radio on summer nites while keeping a scanner open for any targets of opportunity that travel past. I especially would like to monitor military fly-overs. I know there is some traffic on HF, but I'm maybe talking more VHF/UHF. At the same time I'd like a gen'l coverage scanner (hand-held) that I could program to local Police Fire, Rescue, etc. Unblocked would be nice. (Hopefully all in the same unit.) Computer interfacing is not needed. What I'd really like to grab are those VHF/UHF milcomms as they fly over (I live near Andrew's and others).

Currently, I've got a Yaesu FT-980 and a nice little RS DX-392. The Yaesu was modified by original owner and will tune down to 0 Hz.. Yep, I can put it down on 60Hz. and listen to the power-line hum. Very freaky to hear; You start thinking, "All that's going through me?" Sounds like the Mother-ship landing. The DX-392 IMHO is the best 100.00 portable out there. They are both great for what they do, but I think a scanner would make a nice compliment. Imagine sitting out on the porch at nite with a few cold, frosty ones while the FT-980's on 40M, the DX-392's on Art Bell, and the scanner grabbing F-16's or Herc. transports as they fly over. Sounds like a great way to spend a summer/fall nite to me ! Is it possible ? Which rigs ? Costs? Web- sites for more info/specs. ?

Alot to ask. Please accept my thanks in advance for any help you can offer. My respect and good wishes to you all.

73,

Andrew/ KG4JBM

Source record: 62693

I have a bearcat 200xlt that is dead and can be used for parts.
Comes with ac adapter and battery pack that reads 7.1 volts.

I also have an older Bearcat 200 desktop unit that works but has
white noise coming out of the speaker even after operating the squelch.
This units is operational but the noise should not be there.

Neither scanner has an antenna.

First offer over $40 gets both and I pay UPS ground to your door.

Please be advised that both units are being sold for parts though.

Thanks,

Jodia

Oh, you should have seen the field kitchens the French were running about twenty years ago (I don't know if they still do it). During a field exercise in Germany, we were eating rations, while they had fresh baked bread, cheese, wine, some kind of submarine-like sandwich with ham, tossed salad, and some kind of meaty vegetable soup. Darn, I was hungry after watching them eat. Luckily, I guess they felt sorry for us since they let us have some also (though the Lt. didn't let us have any wine).

They did the same thing to a couple of my relatives - called them back to active duty after serving during WWII (my father was already on active duty - he was too young for the "big one").

Go down at least 8' into the earth. Anything less than this does not offer
adequate protection.

A CB antenna is a poor choice for a scanner antenna. Will work well on VHF-Lo
(30-50Mhz), but lousy on all other bands.

My friend, I can certainly comprehend what I've written. I just don't comprehend your claim that what I've written would be of interest to a Jewish survivors group. Since you flatly refuse to explain your claim, I'm left with the assumption that you just used that statement to try to twist what I've written into something that exists solely in your own mind.

Dave,

Great and informative answer. I have an original Uniden Trunk tracker. I like being able to setup TG banks within the frequency bank , as you described. It is a great little radio. Fairly easy to use, but I'd sure like alpha tags and AA batteries, instead of the nicad-pack.

Thanks, Pizza Man

Hi guys-
I'm in southwest MO, and for the last hour (since 10:50pm CDT, and now it's a little past midnight) I've been hearing some really neat low-band police, fire and other emergency comm's. I've not experienced this before so I'm a little hyped about it!
It started with some unid. Spanish comm's on and around 31 to 33 MHz, then just above 33 (from .200 to nearly 34.000) I started hearing a lot of NE departments, like Danbury and Newhaven CT., Georgetown police and ambulance, Foxborough MA comm's, and a lot of other unid's ... I've since almost nailed the earlier Spanish comm's, as likely DX from Mexico, and one possibly Argentina (31.24)... anyone else out there in a nearby region hearing these same conditions?
Linus

Yeah, the skip conditions are pretty good right now. One of my ham radio friends at work here in Texas told me yesterday that he talked with a guy in South Carolina on 10 meters (which isn't far from the frequencies you mentioned).

Some years ago I was listening to a Fort Worth 2-meter repeater and some new guy with a 5 callsign checked in. He said he was driving to work but we didn't recognize the highway number he was on. Turned out his signal was skipping in from Vicksburg, Mississippi!

You might have some fun doing TV DX'ing, too. Put up a beam antenna and start clicking onto blank channels.

I don't know if any one particular scanner can do everything... I've got a dual-band Standard VHF/UHF (2-m, 440-MHz) handheld ham rig that can also receive a great many other frequencies. But it can't tune in on low stuff that my Bearcat scanner can hear, such as aviation traffic around 120 MHz and cordless phones near 47/49 MHz.

They pack so many features into the newest receivers these days that I must keep the manual handy so I can remember how to program particular functions -- such as "scan everything between these two frequencies" and "lock out these particular f's".

During the day I've been hearing a lot of "skip" on low-V. On 33.900
a few days ago, I was listening to fire dispatch for Hamilton County,
OH (Cincinnati). They dispatched units to an address where a teenage
boy had pierced his own toungue & then started feeling weak. Just the
thought of piercing my own tounge makes me feel weak.

Hi Jim....a very good observation using rock salt. I did read up on chemical grounds a few years back and at the time, in my haste for the perfect RF ground, i may have mis read something there. Some kind of safe salt compound was used in the information i got. I guess it was blind faith cause you really can't tell if you have a real effective RF ground. I assumed if the area around ground rod was wet and coupled with a conductive material, it would be better than no ground. But there is no way you can see it. And polluting wells is no good. The place i lived had no wells and town water/sewer. Ground was very sandy for about a few feet, then rocky. the new house had 2 ground rods for elec. system. I asked electric compaqny why and they said because of the poor soil quality. i gues in the extreme, you could lay out a network grid of cris crossing wires all over the property then cover with soil and connect your ground to this! I read in ham radio mag about a guy who actually did this at a new construction. he laid out a grid covering the wh\ole yard and then had topsoil and turf put on. bob

> Just the
>thought of piercing my own tounge makes me feel weak.

Hehehe... you have to love some of the calls you hear. One of the Newhaven CT comm's I heard last night cracked me up, the woman dispatcher was reporting a 'floating telephone pole' on Beauregard Court... apparently they had some flooding from some heavy rain last night, but she was still laughing her butt off at the same time. Pretty odd sometimes!
Linus

2110. WOW! Now this is pretty cool... I'm hearing Chicago

Newsgroup: rec.radio.scanner

Now this is pretty nifty. Last week before I left home to drive into Chicago, I programmed in the Chicago PD's citywide and zones 1-16 frequencies.

Well what do ya know today I'm foolin around with the scanner and turned on that bank, and I'm hearing them all the way up here in Rockford. Just using my 780xlt with the standard antenna, while in my car.

(I know, I'm too easily impressed, but I thought it was cool)

Hello!,

I have a R.S. PRO-51 Scanner, How long do I leave the batteries in?.

There is no indication light to show if they're charged or not.

And do I have to use a special charger or can I use the power jack to charge the batteries?

Anyway if anyone can help thank-you

P.S. First time I used the charger mode on this scanner, I don't want to blow it up..

No, there is not such a thing yet.

Uniden is working on one and should be available by the end of the year if there are no delays.

Hope this helps,

Ed

No, ASTRO Systems are in the Digital Mode; at present there is no Hobby Scanner Equipment available to monitor Digital.

See the following Link:
http://www.trunkedradio.net/trunked/apco25.htm

Further information on ASTRO Digital Systems can be read up on there.

I own one and cannot complain. It works great for base if you do not need a
trunk tracker.
To complement I own too a Pro-94 portable which I use when I am on the road.
My Pro-2045
is used at home.

You can check the user's manual out of Radio Shack page at:

http://support.tandy.com/support_electronics/33680.htm

for the Specs, another review, and to see how to do the Discriminator tap
modification on this unit goto:

http://www.strongsignals.net/htm/pro-2045.htm

I am pretty satisfied with it and cant complain. You can probably get one
cheap at Ebay.

Hope this helps!

Okay, okay, enough of the flame for a moment...

I know this is OT, but I ask out of practical curiosity... what are
the constraints? Is a .44 Magnum allowed? What about a .45?
What about a shotgun with slugs? I'm seriously thinking of doing
a camping trip way up north in bear country, and the idea of just
being bear bait gives me the willies. It'd be my luck to wander
between a mother and cub inadvertently...

Also on that note, what about a foreigner with a firearm? What
restrictions on Yanks exist (assume no convictions, etc, etc)...

Howdy,

Okay, so now I'm beginning to get it a little better thanx to you
guys and Strongsignals.net. Three more questions if you don't mind.

1. Mil aircraft is approx. 226-406 or thereabouts??

2. How much of that is trunked?
(I'm sure some stuff is digital/encrypted,etc. In general, what to expect?)

3. Will a trunked scanner also scan non-trunked just as well ?
(Couldn't find this on strongsignals.net :-( )

If most milcomms of aircraft are NOT trunked this would make a huge difference
in what to buy. Examples would be Airshows and occasional fly-overs. Any
comments on this?

Thanx,

Andrew

Could be. What you were probably hearing was tropospheric ducting.
When there's a temperature inversion, a layer of cold air is trapped
between two layers of warm air. This creates a "duct" that radio
signals travel through for long distances and be picked up far outside
their normal range. Normally occurs with VHF, but I think I've heard
of it happening with UHF signals too. At work we've been having a bad
time with it, since we've been picking up other agencies on our
frequencies. Even with PL tones on the repeater, they still interfere
when our units are on their handhelds.

>
> 1. Mil aircraft is approx. 226-406 or thereabouts??

Yes. The milair band is 225-406 MHZ, channel spacing is .1 MHZ, AM
mode.

> 2. How much of that is trunked?
> (I'm sure some stuff is digital/encrypted,etc. In general, what
to expect?)

None of it is trunked. It is all simplex, no repeaters. I've never
heard any digital or encrypted comms in the milair band, though. I
suspect the important comms are sent via encrypted FLTSATCOM links.
But there is lots of stuff in the clear to hear.

> 3. Will a trunked scanner also scan non-trunked just as well ?
> (Couldn't find this on strongsignals.net :-( )

Yes. I think most trunking scanners you either switch from scan mode
to trunking mode.

> If most milcomms of aircraft are NOT trunked this would make a huge
difference
> in what to buy. Examples would be Airshows and occasional fly-overs.
Any
> comments on this?

You don't need a trunking scanner to listen soley to the milair band.
I'd only buy a trunking scanner if the local PD has a trunked system.

Ah... squids were simply bus drivers to me...with the exception of the
hard core dudes doing riverine duty. Last time I called a bus driver
Mister, was out of manners, not respect....and so far..with the
exception of doing your duty to your country... you have deserved
neither from me.

And.. as your mos involved commo, given your "love me" newspaper notice
you were depending on to get you some slack... I have even less need to
feel respect for you.

Unless you were a antenna jocky..your duty station probably consisted
of a nice warm comm shack wayback in the guts of some floating bomb
magnet, where the chances of you picking up a wire splinter or a paper
cut, or carpel tunnel syndrome..were magnatudes higher than the likely
hood of stepping on a MA, or having Little Brown Brother try to put you
on the KIA list. I have known a few Navy commo guys, in years gone by,
who had shore duty doing repeater setups, etc etc..who got into the shit
on a regular basis..and I have oodles of respect for them for the most
part...but you? Based on your posts... I figure you may wind up at DeVry
sooner or later in the Slow group.

Does anyone know of a good web site that explains in detail (preferably with pics) of how to make the connections of the N type plug to RG-213 cable?

Thanks

Paul Ponting
Technicial Specialist - (Novell) CNE

The ARRL Handbook and the ARRL Antenna Book both have some
instructions for attaching Typw N connectors.

It is kind of cool when that happens. Actually, when ducting occurs, the effect can become more pronounced as you go higher in frequency. I was listening the other day to a couple of the 460MHz Chicago PD channels, and I was hearing Milwaukee PD coming in pretty strong, with a only a whip antenna attached to the back of the scanner.

a good way to roughly calculate how long charging will take, find out how much current is put into the battery in miliamps. then take the capacity of your battery (in mah), then devide it by the charging current. that number you get will be how many hours it will take.

If you are trying to find it on Radio Shack's online site, forget it.
That's what I tried at first but couldn't find it.

I just walked into a Shack and there were plenty on the rack (marked
20-006A, $9.95)

You will need to account for charger inefficencies.

Simply divide the capacity of the battery by the charge rate of the charger, then increase the amount of time by about 20% to allow for a certain amount of inefficiency. As an example, a battery with a capacity of 1200 mAh will require about 6 hours to be fully charged by a charger with a charge rate of 250 mA. (1200 mAh/250 mA x120%). Keep in mind that a battery that is only partially discharged will be recharged in less time.

I set up communication systems. But your knowledge of navy comms is
severly
dated. Repeaters are not used any more, since the modern days of
satelites. BTW - If I were at DeVry, it would be as a Professor or
Instructor,
certainly not a student. So you'll have to find a different friend to keep
you
company a the DeVry "slow group".

I don't think the picture, or article, implies anything like that, Joe. The article seems to be asking about what technology will be used after radio has reached the upper limits of the usable frequencies. Therefore, the picture is showing the progression of radio up the frequencies from HF, through VHF/UHF, and on into the unknown beyond. The article then points out that, at some point, further movement up the frequencies has to be ruled out (because of safety considerations, etc). The article then offers rather shallow comments about possible technologies that might be used at that point. I saw nothing in the article about unused frequencies, or about users of any radio band.

That's what I thought when I first saw it too! Also, that was why when I noticed that they had Ham frequencies on the cover, that the article was going to refer to Amateur Radio in a positive way. Instead it seems that they went out of their way NOT to mention Hams in an article that should scream out for noting Amateur accomplishments in the area of pioneering new ways to communicate! You have to read between the lines on this, if you look closely at the frequency ranges in the cover photo they are what is known as "guard bands" or basically un-used spectrum. There's no reason why Amateur Bands should be included in this in any way and for any reason, especially on the cover of a "trade" publication like MRT which serves the interests of commercial radio and NOT or ever could be for the interests of Amateur radio.

> Therefore, the picture is showing the progression of radio up the

<<<That's exactly what I'm saying Dwight. The cover doesn't go along with what the article is supposedly about.

Tell me why they should they list ANY of these frequency ranges on the cover since NONE of them have anything to do with the subject matter of the article itself! They are talking about the "theoretical" and the cover refers to what we already know about and use every day. I'm sorry Dwight but I look at this as an opportunity by a commercial radio publication to get Amateur frequencies on the cover of its' magazine. Perhaps in an effort to stir some interest in their readers to start asking about "Hey, what's on these frequencies?" and possibly begin yet another effort to relieve the Amateur Service of some more of its' precious spectrum. If they wanted to show the "progression" of the RF spectrum then they should have placed a spectrum chart on the cover. Instead they went out of their way to list specific frequency ranges and not just a broad representation of the RF spectrum. Believe me it was NO MISTAKE that they listed 144-148Mhz in the largest and boldest type and at the front of the list followed by 222-225Mhz and then 420-450Mhz that was without a doubt very intentional and any Ham operator should be outraged that they would have our bands on the cover of their magazine for any reason. Remember they are not in business to help

Amateur Radio they're in business to make money and RF spectrum is BIG money!

Please take another look when you get a chance:

I have a BC780. I'm looking for the treasure coast area. St. lucie,
Martin, Indian River, and I believe West Palm Beach. When I listened
to them on 451, the main dispatch seemed to come out of West Palm.
When the power goes out, I like to hear what's going on about fixing
it. Thanks alot for the help. I'm not familiar with the EDACS. St.
Lucie county just went Motorola type II 800. I'm having a hell of a
time getting talkgroup id's from the county. They use our money to buy
the system and then try to keep us from listening. Is there a certain
order when programing the EDACS? Do I need to put all the freq. in a
bank and lock out the areas I'm not interested in? Thanks again.

I saw no such indication. Did it occur to you that the amateur
frequencies in the artwork might have happened because many MRT
readers and authors are already hams?

This was an article about what comes after radio. Where do we grow
to? I thought the ideas there were pretty exotic and unlikely. The
idea of using everything up through Infra-Red electromagnetic waves
wasn't too outrageous, but using UV, X-Rays, and Gamma-Rays was pretty
weird, not to mention communications by particle accelerator...

A more likely scenario is that modulation technologies will meet the
21st Century and that we'll make far more efficient use of the
spectrum we have today. Spread Spectrum, data compression, combined
with well designed power control schemes, error correction protocols,
and adaptive antenna arrays will be able to carry us well in to the
middle of this century at least. Embedded computer technology will
make it happen.

The real issue to be resolved is political: How do we make the
transition from narrow-band communications to wide-band
communications? We can't just turn off all the narrow-band radios and
switch over to new ones without a great deal of political upheaval.

MRT did it's readers a dis-service in my opinion, by not addressing
these technologies and the politics embedded in it. Instead they
offer all sorts of gee whiz BS about using sub-atomic particles to
communicate. --And they thought electromagnetic radiation was hard to
sell!

No, it didn't occur to me at all and I seriously doubt that's the reason for
the cover artwork unless you know something about it that we don't?

You made a lot of good points Jake and I agree with most all of it. But for what ever reason Amateur frequencies ended up on the cover of their magazine I really don't think that they belong there. This is not the kind of publication that would be "looking out" for the interests of Amateur Radio since it does conflict somewhat with their own. It also seems to me that as you began to read the article that you also became annoyed as I did at the "stuff" it was saying. That's the very reason why I included it rather than just putting a picture of the cover up there because I wanted people to see that this was in no way related to Amateur Radio and so that everyone would have the opportunity to form their own opinion about it as you did. Thanks for replying and checking out the site.

I would have to admit that I must agree with you at some level on this point. Since cell phone usage and other wireless messaging devices and services have become cheaper and more accessible by everyone we have all noticed a decrease in activity. That is of course another issue and one that needs to be addressed by the Amateur community and I suppose the ARRL. However, that still doesn't make it alright for them (MRT) to take a shot at the hobby like they did.

I can just as easily point out that traditional commercial two-way radio services and their customers are in decline as well. MRT mainly serves the interests of conventional and trunking type radio system operators and end users. Companies like Nextel (which if you read MRT seems like they don't like much either since they like to refer to them as that "Next" company) in a disparaging way is responsible for taking A LOT of business away from conventional and trunking systems operators by the truckload! As well as them taking a big hit from other cellular and wireless messaging companies doing the same thing! This I would imagine would have a direct affect on their (MRT's) subscribers which will probably decline as well as a result. And I don't see them going out their way to call any attention to that fact!

Here is the article that came out about 1 or 2 months back. I do not know
if the links is still good.

Project 25 scanner expected in 'about a year'
Says Don Bishop, Editorial Director of
Mobile Radio Technology Magazine, June 1, 2001

Uniden America, Fort Worth, TX, expects to manufacture a scanner capable of
receiving trunked
Project 25 communications within a year or a little longer.

"It's something we have been working on," said Jim Cassidy, the company's
product planning
manager in charge of scanners and other products.

Cassidy said that listening to communications carried by a public safety
trunked radio system doesn't violate
restrictions imposed by federal law, which includes exceptions for public
safety communications and for broadcasts
intended for public reception.

2158. RE: Interesting low band skip tonight (last night)

Newsgroup: rec.radio.scanner
Date: 2001-07-19 16:35:43 UTC
From: alaininvc@netscape.net
Message-ID: <9j728v$gb9$1@news.netmar.com>
Source record: 62624

Hey Guys,

As someone who is new to "skip" reception, I was wondering how do you conclude

that these transmissions are coming from where you say they do? I'm not doubting
your word, mind you; I receive a lot of DX here on Palomar Mountain, in Northern
San Diego County (Calif.) on the low-band frequencies, but I have no way of
checking or verifying what it is I'm listening to; I do know that they are not

from the So. Cal. area. I don't know where they originate and seldom hear a
station I.D.

So my question to you all is: how do you discover the origin of the transmission,
confirm the destination and area of your DX reception?

Thanks for taking a moment to respond!

Alain

From: Sean <sa1@ukonline.co.uk>
Message-ID: <9j78jg$p7q$1@neptunium.btinternet.com>
Source record: 62626

Hello fellow radio enthusiasts
I am looking for a decent ALL-MODE handheld scanner along the lines of a
VR500 Alinco DJX-10 Yupi 7100/9000 AOR8000/8000MKII or similar.
I have in way of a trade,
1 Pro 2006 unblocked with 5/12.5/30/50 step size.with manual
2 Pro 2042 unblocked with 5/12.5/50 step size with manual
3 AOR AR-2800 unblocked AM/FM/USB/LSB/CW
covers from 500kHz-600MHz, 800MHz-1300MHz 1000 channels
this is getting on a bit but it is in excellent unmarked condition and works
perfectly. also has manual
4-Uniden BC-890XLT covers 29-54MHz 108-512MHz 806-1300MHz.
AM/FM 200 channels. steps= 5kHz, 12.5kHz, 25kHz. with manual
I will do the AOR for a straight swap on one of the handhelds mentioned
above
Or any two (2) of the others for a top end handheld
please e-mail
thanks
Sean

GSBARC ARRL VE sessions are normally scheduled every forth Sunday
of the month, 12:00 NOON.

No pre-registration required. No walk-ins after 1:00 PM.
Exams are given for 5 WPM CW, Technician, General and Extra class.
All exams are ARRL/VEC. New CW exam format effective July 1, 2001.

Location: Babylon Town Hall
Emergency Operations Center
200 E. Sunrise Hwy.
North Lindenhurst, NY

Talk in : W2GSB repeater 146.685 -600 118.8 PL

All VE sessions are located at Babylon Town Hall, (between Rt. 109 and
Wellwood Ave.) in the Emergency Operations Center. (unless noted in the
VE schedule). People coming from the west need to make the left onto
N. Indiana Ave to enter the Town Hall parking lot. People coming from the
east use the main entrance. Drive around to the back of the building between
the wings. Look for the sign over the door pointing to the Emergency
Operations Center (it's a small white sign with red letters). Go to the
bottom of the stairs and push the top button. When you get inside the
building go left down the hall. The Emergency Operations Center is on
the right side of the hall.

Please bring the following:
- Photocopy and original of current Amateur Radio License if licensed.
- Photocopy and original of CSCE(s) that are current.
- two forms of ID, at least one photo ID.
- pens or pencils.
- Calculator for math problems on exams, no pocket computers are allowed.

- 2001 Exam fee is $10.00, please bring exact change.

2001 GSBARC VE schedule.

July 22
August 26
September 23
*October 28 - Hamfest
November 25
*December: * NO scheduled VE in DECEMBER 2001 - Season's Greetings

If you have any questions about GSBARC exam sessions you can contact the
GSBARC VE contact Tom Carrubba KA2D at (631) 422-9594 or email GSBARC
at info@gsbarc.org.

Information on other exam sessions can be obtained from the ARRL-VEC, and
other VECs around the country.

Information is also available during the GSBARC 2 meter info net every
Monday evening at 7:00 pm on the W2GSB repeater,
146.685 -600 118.8 PL
required. You may also write to:

Great South Bay ARC

I waited until I heard the repeater ID in CW, then looked up the
callsign on the FCC's website. I was also hearing several other
stations on freq that I didn't ID.

OK. I followed your link, and the only mention of amateur frequencies I noted was in the picture which constituted their cover (and repeated on the first page of their "cover story" column). There was no mention of our frequencies or that in terms of being assigned to any other service within the article itself.

You might have gone too far with this - or perhaps not. Had the article itself mentioned something else about them, then OK. Otherwise, you're merely assuming a position (without supporting facts) which may be speculation.

Have any of their other published works in any way refered to the amateur radio allocations?

2164. Upset with Daytona Beach Police....Very UnProfessional

Newsgroup: rec.radio.scanner

Message-ID: <9j7dfg$468k$1@newssvr06-en0.news.prodigy.com>
Source record: 62630

I would like to hear some options to this. The Daytona Police are (almost daily) running "undercover Prostitute" stings. While they are doing this, many more important calls go unanswered due to "no available units".

About 3 weeks ago there was a call of a possible teenager had given birth in a motel room as the manager found blood inside a vacant room and a Pragant teenager was seen around the motel a day earlier. The manager thought he had seen the teanager come and go from a wooded area near the motel. The manager called Daytona Beach Dispatch around 1PM. It wasn't until 9PM that a Daytona Beach police officer was assigned to the call! The reason given by the dispatcher was that during the afternoon shift all the officers were busy on "the detail".

Next, during these "details" the unmarked undercover cops NEVER use their turnsignals. For the short time (2 months) I've lived in Daytona Beach I have seen VERY FEW marked Police cars use their turnsignals as well.

With their lack of obeying the same traffic laws they are to inforce and some of the very UNPROFESSIONAL radio communictions during thier "undercover stings" I am having less and less respect for the people who are hired to "Serve and Protect" the citizens of Daytona Beach. Regarding the "unprofessional" radio communictions, one cope refered to a prostitute as "there is the big blue pragent whale". I don't car who a police officer is refering to, you don't use that kind of talk when you are a professional!!!

Today during their "undercover sting" I was able to get a few photos of their unmarked cars being used. I'm thinking of posting these on my RadiosOnLine website under a new section called "UnderCover Cops Busted!". What do you think?

From: John Schneider <theoldcop@hotmail.com>
Message-ID: <9j7j6icl1@bob.news.rcn.net>
Source record: 62633

On July 16th of this year I posted a "For Auction" notice on this newsgroup, apparently in violation of eBay policy. I have since received a notice from eBay advising me of this indiscretion and, if I have insulted, violated or otherwise upset other rec.radio.scan members, I apologize.

To the gutless wonder that reported me and was too afraid to personally confront me...maybe someday our paths will meet and we will be able to discuss what it truly means to "be a man and stand-by the power of your convictions"

I remain,
John Schneider

I see your point but I don't agree with you about this being speculation at
all. If we get right down to the heart of the matter then all you have to do
is ask yourself is one thing... what are they doing putting amateur radio
frequencies on the cover of their magazine? They have nothing to do with the
cover story "Beyond RF", our bands along with the others that they have
listed on there are most definitely and without a doubt RF frequency bands.
The article talks about Particle Beams, Baryon's, Fermion's and even Quarks!
But never does it mention why or give any clue as to why or what amateur
radio frequencies have to do with all of this "Star Wars" stuff that they
have in the article!

Furthermore the article fails to cite amateur radio in any way, it doesn't even pay any kind of tribute to any hams past or present that have made some contribution to the world of radio communications. So just what are we to assume, that they just ended up on there, right in front, in the largest type, completely un-obscured (unlike some of the other frequency ranges they have on there) just by accident?

If they wanted to graphically represent us moving beyond RF communications as we know it then why be so specific about the ranges of frequencies they put on the cover? Take 220Mhz for example, back in 1991 the FCC re-allocated the bottom 2 megahertz of this band to commercial service in the US. The amateur portion then became 222-225Mhz instead of 220-225Mhz as it originally was. Don't you find it a little strange that the publishers of MRT decided to include this frequency band on their cover but made sure only to list 222-225Mhz which happens to be JUST the amateur portion!! I mean what the heck! They already scammed us out of the bottom 2Mhz of it, why would they want to bring any attention to the 220-222Mhz range that they already stole from us!

To me this seems like a very obvious attempt to draw attention to our amateur frequencies in a way that would suggest that these frequencies are the some of the ones that they would like to "explore". Well I say thank you very much but we ham operators already have that taken care of and don't need commercial radio involved in the matter.

And just one last thing I'd like to mention, I also found it intriguing that they decided to start at 144-148Mhz as the first frequency range on their list. Why not start somewhere below 30Mhz or even at 30Mhz and go up from there? Or for that matter why not include bands that are allocated to government, commercial and public safety agencies?For one thing there isn't much commercial interest in frequencies below 144Mhz! At least not for the type of people who read MRT who are mainly involved in relatively short range, point to point communications. And the other reason is that they wouldn't want to piss off the people who are operating in these bands like they did to us! That would be "biting the hand that feeds" since after all they make up all of MRT's subscriber base. I guess that makes us Hams fair game since who cares if they insult and piss us off. After all we don't have the kind of money or lobbying power that they do...right?

Here in South Florida I catch skip and ducting from time to time, mostly Lowband Fire Communications though I have nailed some activity higher up around 154 MHz (ish)

For ID of radio; I try to listen to locations and use a map.. sometimes they will give information that helps: Mut-Aid to XYZ County and so on...

TV Signals come in from Tampa some nights when I am in the Shack, I ID them by the Station ID or commercials.

It is fun when you can catch it, sometimes its neat to hear out of towners talking

To the RRS and ARS newsgroups:

Simple. I just turned somebody's lights out
for an indeterminant, but probably long
period of time.

I've done it before and it kills his soul'
eats him up; activates his ulcers and piles.

He responds with a blitzkrieg of forgeries,
e-mail bombs, and posts from a dozen of his
aka's. I am usually not the only one on
his target list. He singles out others for
these attacks, too.

So be forewarned and forearmed. It is EASY to
tell forgeries. When I post to the newsgroup,
the PATH line of MY posts will always end with

!newshub.cts.com!relief.cts.com!not-for-mail

If it ends with anything else, it ain't me.
Furthermore, legitimate headers from MY posts
will also contain the following entries:

NNTP-Posting-Host: wagasa.cts.com
Mime-Version: 1.0
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

Content-Type: text

If an e-mail header ain't pretty much exactly like the
above, it ain't from ME, boys..... If ever there is a
question, send me a civil e-mail to: bcheek@san.rr.com
and then check out the header of my reply.

The person whose lights I just turned out is given
to sending large e-mail bombs to people IN MY NAME.
Beware, if you get an unsolicited e-mail "from me"
that has a large file attachment. Just delete it
before you download it. I will not send anyone
unsolicited files, so there's a clue right there.

In a word, the person whose lights I just turned
out WILL go on a rampage and while I will be a
prime target, so will some of you....just so he can
say it wasn't HIM. But it is.....

Protect yourselves. And if and when anything does
happen, I urge you to publicly discuss it and cite
as many of the details as you can. There are people
on this newsgroup who are skilled at ferreting out
the sources and causes of these kinds of issues.

Now....shall WE get back to scanners and scanning?

THAT's my choice anyway, for as long as it doesn't
prove futile. It will take a lot of other choices
to dispel that futility. And each choice is an

individual one. Despite that this is a "newsgroup",
WE are not a "group". WE are only a mass of individuals.

I don't think it gets any better than that. Every
choice remains an individual one; and the solutions
to ALL problems, perceived and real, lay in control
of your own computers and control of your own software.
Once you are in control of your hardware and software,
then it is possible for us to act and function as a
group. But again, this is a matter of a LOT of choices.

Enough to constitute a quorum anyway.....

Scanners and scanning coming up at 11.

You'll get more action by airing your complaints in Daytona Beach rather than here. If you can confirm these claims, the local newspaper might be interested.

It seems you're not the first to be reported for listing items for sale or for auction here. Apparently someone has a hair up their rectum. As far as I know, there's no rule that says you can't list items for sale or auction here, as I don't think there are any policies for this newsgroup.

As far as I'm concerned, people can list items for sale or auction as long as they put "FS" or "FA" in the header. Even if they don't do that there's no reason to get bent out of shape about it.

Tom

I go to scanshack.com and get redirected to scannerdweeb.com. I'm specifically looking for the article that shows how to convert a Uniden 3000xlt battery pack to use AA's, but I can't find and of the tech links anymore.

I even found an archived google (deja) article that had the url, but it still redirected me to scannerdweeb.com.

Help?

Hmm, I didn't know eBay had such a policy. Most newsgroups permit brief "for sale" announcements of items highly relevant to the newsgroup. It's not entirely clear whether this one does, but posting one here does not seem to be a heinous offense. Now if you were selling laser toner cartridges and cross-posting to 50 newsgroups, *then* we'd be upset! :)

2183. Re: Ham Radio Attacked by MRT Magazine

Newsgroup: rec.radio.scanner
Date: 2001-07-20 03:04:00 UTC
From: "Michael A. Covington" <see.www.covingtoninnovations.com.for.address@x>

I think it may be a case of the cover design artist simply being klutzy or uninformed. He/she wanted a list of frequencies, found this list somewhere, and made artwork out of it -- perhaps not realizing it was a list of ham bands.

It is quite common for some of the staff of a technical magazine to be untrained in the technology the magazine covers.

I don't see where they've insulted ham radio. At most one might send them a polite letter such as, "Your readers may not have realized that the numbers in your cover art for *date* are actually the frequencies of Amateur Radio VHF bands. The 140-MHz and 440-MHz bands are very active in most areas, with the 220-MHz band lagging somewhat behind... ...etc. ..."

I don't think they've done anything except fumble.

> positive way.

And why would you think that? What frequencies would you prefer they use? If you're going to make a picture with frequencies, those are as good of frequencies to use as any others. And I don't see the connection to ham radio at all. Many of the frequencies listed in the picture have nothing at all to do with ham radio (they're cellular phone frequencies and beyond).

> Instead it seems that they went out of
> their way NOT to mention Hams in an
> article that should scream out for noting
> Amateur accomplishments in the area of
> pioneering new ways to communicate!

Again, why? The article had absolutely nothing whatsoever to do with ham radio. I think you're getting a little carried away with this. Do you always get this excited when someone mentions a ham radio frequency but does not include an explanation about ham radio's accomplishments?

> You have to read between the lines on
> this, (snip)

I guess I just don't have to ability to read what clearly doesn't exist.

> Tell me why they should they list ANY
> of these frequency ranges on the cover
> since NONE of them have anything to do
> with the subject matter of the article
> itself! (snip)

If you're writing an article about the progression of radio up the frequencies, and then asking what lies beyond that, then the picture used does convey that concept. And, like I said before, if you're going to use frequencies in the picture, those were as good of frequencies to use as any others.

> (snip) I'm sorry Dwight but I look at this
> as an opportunity by a commercial radio

> publication to get Amateur frequencies on
> the cover of its' magazine. Perhaps in an
> effort to stir some interest in their
> readers to start asking about "Hey, what's
> on these frequencies?" and possibly begin
> yet another effort to relieve the Amateur
> Service of some more of its' precious
> spectrum. (snip)

And I think you're getting paranoid. There probably isn't a single commercial radio frequency user in the country that doesn't know what frequencies are allocated to what radio service. Its not like frequency allocation charts are hard to find in this country.

> If they wanted to show the "progression" of
> the RF spectrum then they should have placed
> a spectrum chart on the cover. Instead they
> went out of their way to list specific
> frequency ranges and not just a broad
> representation of the RF spectrum. Believe me

> in the largest and boldest type and at the
> front of the list followed by 222-225Mhz
> and then 420-450Mhz that was without a doubt
> very intentional and any Ham operator should
> be outraged that they would have our bands on
> the cover of their magazine for any reason.
> Remember they are not in business to help
> Amateur Radio they're in business to make money
> and RF spectrum is BIG money!

And many of the frequencies they listed have absolutely nothing to do with ham radio. In addition to the frequencies you listed above, they also used 824-849Mhz, 932-935Mhz, 1850-1990Mhz, 2450Mhz-2690Mhz, 30.55-32GHz, and others. In addition, the article's title ("Beyond HF - What's out there besides radio?") makes it very clear what the article is about - its clearly not about ham radio.

> Please take another look when you get a
> chance:

No thanks. I've already spent way too much time on this. Like I said, I don't think the picture, or article, implies anything at all like what you say it does. And I think you're reading things into the article, and picture, that simply does not exist. Having said that, I'll end my involvement in this discussion at this point.

I would NOT say that the 220MHz band is "lagging somewhat behind."

Here in Southern California, the band is FULL. Most repeater pairs have at
least 3 machines on them (in different but overlapping coverage areas). In
fact, it was only 1999 when the last repeater that had been bumped from the 1991
alignment (loss) of the band found a new home frequency.

Just because in your area there may be available pairs doesn't mean that you
should say that the band is less than fully utilized.

When the sun spot cycles are good you never know. On the 10 meter
band (28Mhz) out of my car here in California I talked to a guy in the
mountains of Mongolia, USSR. I'd have to look into the cycles to see
when we peak again. Once we do, you're going to be in for a treat.
I'd even do a band scan around 29Mhz for the 10meter FM repeaters.

Bottom line: The fact that somebody complains about it doesn't mean it's wrong. You should reply by asking your ISP (or eBay, or whoever) whether the complainant actually showed them that there is such a policy, or merely made one up out of thin air.

During the 5 years that I handled computer security incidents for The University of Georgia, as many as a third of the complaints that we got were in bad faith. That is, the complainant was trying to harass someone by accusing them of trivial or even nonexistent wrongs, as a cover for his/her own worse behavior. We learned very quickly to take a close look at complainants, and to make our own assessment of the facts. Unfortunately, some ISPs don't seem to have realized this yet.

Trunking is a Radio System that is run via computer, which assigns Talkgroups, Priority Status and routes traffic to the right place..
sort of like a Telephone Exchange.

Further on Trunking is available from:
http://www.strongsignals.net/
Go to the FAQ, and New to Scanning

There is also a section there that does reviews and provides background on Trunking Scanners

>
> its a bit dated

"a bit dated" ??? They're about to rip out that Astro system in that press release and replace it with EDACS garbage. There were a lot of questionable moves on the part of Florida to conduct meetings behind closed doors (in violation of sunshine laws) - with only one vendor present (Ericsson), and the public excluded.

Motorola is still litigating this IIRC. The decision to go EDACS means all the communities which bought Astro equipment to be able to communicate with FHP, and other FL agencies are now SOL...they will have to now purchase Ericsson equipment, and get rid of their Astro equipment (has Astro & EDACS - are not compatible), much less Ericssons implementation of CAI-25 - Motorola & Ericsson radios will not work with one another.

Motorola built the system to Florida specifications ahead of schedule, and on budget. Florida awarded the contract to Ericsson, even though they have NO experience in building out a huge project such has this, and in fact some rules were changed (or completely ignored) by Florida to accomodate Ericsson.

Totally fucked up move worthy of some serious investigation. The taxpayers of Florida should be up in arms over this...

Joe,

I use one HF comm receiver (Drake R8B) and a bunch of scanners. I
didn't want the VHF/UHF board for the drake, as antenna switching would make
things messy, so I handle the situation by throwing hardware at it. I use
the Drake for all HF, a RS Pro-2042 for my local PD, Fire, EMS and airband.
Got a Uniden 780xlt for the trunking side and an Icom R2 for walking
around - this is a nice little radio! My Icom T81A HT four-bander is great
for travel and is a decent scanner in a limited sense.

yeah good scanner,but there is a problem for sensibility.
very sophiscated high end reciever and there is
a software for AR8200mk2 called arexsystem
this is excellent software.if you get 8200mk2
you have to get this.if you don't use with PC,
I recommend yupi MVT9000mk2 has more good sensibility.

>I would like to hear some options to this. The Daytona Police are (almost
>daily) running "undercover Prostitute" stings. While they are doing this,
>many more important calls go unanswered due to "no available units".
Er CHILL OUT DUDE!
Cops are not like you and I.
They seldom are called on to obey the laws they "enforce".
While your plan looks like fun, you will only bring unwanted(I am assuming
that you really are in no rush to die, right!?> upon you and your family.
The LAW does not like to be caught with their pants down,a nd will rememeber
you for a long, long time. Get real and just enjoy the foolishness.
Remember the POLICE have no duty to you or any other "individual".(except in
rare case so bizre as to never occur). The SCSC has ruled many times, in cases
that whould shock you, that individuals enjoy no prtection. Get used to it,
COPS are NOT your friends. They are NOT there to "serve and protect". And,
that most of the time, they will do dman well just what they want to do. And
you are a powerless serf.
You can fight. You can expuse them. But, after the cameras go away it will be
the same old same old. Rampart LA is rare in that they got caught. the Black
guy in NYC that got a wooden handle shoved up his anus was lucky to survive,a
nd, very lucky to not only survive but to win a judgment. Remember the poor
guy who got shot 41 times. The list of police crimes is long and growing.
Speak out against them at your own risk.

He recevie a not to friendly letter from the all and mighty "Radio Hack" (the
"youve got questions and we have not got a clue" people) shutting him down.
I don't know where his articles went, but all that is left is his scannerdweeb
series. Good luck.

2220. My message to eBay

Newsgroup: rec.radio.scanner
Date: 2001-07-21 01:14:15 UTC
From: John Schneider <thecop@optonline.net>
Message-ID: <HH467.76789$qs5.14631423@news02.optonline.net>
Source record: 62538

To ALL of you who took the time to email me with your words of support I offer the following:

----- Original Message -----
From: John Schneider
To: safeharbor@ebay.com
Sent: Friday, July 20, 2001 9:11 PM
Subject: Policy violation

Cassendra,

I recently received an email from your organization "reminding me" of your policy regarding spam and USENET posts. In the body of your message you state that you can neither judge nor evaluate my post, and then comes your "reminder", followed by your advising me that further violation may result in action taken against me via my eBay account.

WHAT HAVE I VIOLATED IF YOU CAN NEITHER JUDGE NOR EVALUATE MY POST ???!!!

This message is to advise you that I take very serious exception to your unsolicited, (SPAM?????) message to me based on an uninvestigated claim of abuse.

Although you saw fit to send me your warning, you have not indicated to me who the sender was, and why, for the love of GOD, would you not fully investigate the complaint.

I am a police officer and if I ever took action based on some uncorroborated complaint, I would be in quite serious trouble.

I am respectfully, although with a certain deal of anger, requesting the e-mail address or the name of the person responsible for reporting an ALLEGED abuse of your policy.

After all, if you accepted his word as prima facie evidence, then, at the very least, I have the right to confront my accuser.

I remain,
John Schneider

I was looking for something else on the RS website, and there was the
20-006A, right with all the other scanning stuff.

Please be aware that auction:

1257041831 - Radio Shack PRO-2004 Receiver/Scanner Radio

in which you were a bidding participant, has been ended early
by eBay for violating one or more of our listing guidelines.

Tom ki0pa

E-BAY took the pro-2004 off.

Perhaps a class action law suit would get Ebay's attention.
My ISP sent me a similar warning.

If you are not already part of it, join the Scan-DC list at
http://www.qth.net

It has heavy coverage of DC and Baltimore. Search the archives.
There is one guy on there (I think his name is Ron) who is always
posting excellent info on Aircraft and frequencies for the Baltimore
area.

I'm not sure I agree. I think it will happen. I think another set of
powerful lobbyists (the media) who want to monitor for reporting
"newsworthy" events will push for digital access to non-encrypted
radio traffic.

Very good John. And we all know that Ebay will have no legal retort. Once you sign on with them "they" believe "they" control your life, and that BS. When communicating with Ebay be sure you wear your kevlar, they tend to stab in the back without warning.

The ONLY color here is "BLUE" also.

How interesting that the person you refer to (who wrote the e-mail pointing
the finger
at other's for e-mail bombs & forgery) was kicked off of his ISP & two
different e-mail
lists for similar type of inappropriate actions, then later he was charged
in federal
courts for illegal actions.

>DeWayne

Class Action Law-Suits work rather well. I've posted to Usenet with "For Auction" information before. If it's "on topic", specific to the needs or interests of the group, then it should be allowed. I never got a warning from it. I've done this twice, including to this group. <shakes head>... some people have nothing better to do than whine and cry.

Once, I posted this "Beavis and Butthead" binary to the B&B Newsgroup. One guy wrote my ISP complaining that I posted a binary into a non-binary group, which forced him to download it, at something like a dollar an hour or so. He then wrote me, and chewed me out. What did my ISP do? Forward me the letter, and said "What's wrong with this guy?" LOL

E-Bay needs to chill... and others need to just relax, and use Filters... which do the job of eliminating what they don't want to see. But then again, it takes brains to do a filter, something the complainer lacks I take.

Cheers

I agree that the use of 100% Encryption will never be used. Our Sheriff Department uses VHF radios still, and not trunked. They do have encryption mode on only a couple of radios, which isn't used except in the rarest of cases. For the small towns and counties, the equipment is too expensive. "Monitoring Times" makes mention of the Project 25 scanning radio currently in the works, so this big digital push is about to be defeated. Which goes to reinstate something I always say: No matter how much technology improves to prevent us from doing something (ie listening in, copying dvds, ect), there will always be something else that comes along to defeat it.

I am looking for a BC780XLT to put in my truck.
If someone has one they wish to sell, let me know the price and condition.
I do not need it to be perfect, as long as it works like it should. I am planning to remote the front from the main part, so as long as the front is in good shape, the rest can be less than perfect, since it will go under the seat!

Contact me at:
dat2comm@juno.com with what you have.

There is a guy who frequents these newsgroups who lives in Lubbock Texas and visits the UK often.
He makes a killing by going to the UK, buying unblocked scanners and then bringing them back to the USA
and selling them brand new, unopened to the USA public.
He frequents Ebay but can also be found in these newsgroups.
Maybe he will come out and say "hi" for a little bit. I saw him in here a couple of weeks ago talking about
something (forgot what the subject was).
Do you need a handheld unblocked?
The last great receiver to be unblockable is the AOR5000+3.
It is easily unblocked through a few commands sent to it over the serial port.
On the other hand, the FCC told AOR to either fix this issue or to stop selling them so the newer
AOR's I think, simply have the password changed to something else to get into region change mode or a
hardware/firmware solution was implemented that is not so easy to crack.

2248. AR8600 vs. VR5000 vs. MVT9000 mkII ????

Newsgroup: rec.radio.scanner
Date: 2001-07-21 15:52:27 UTC
From: Don Parker <tazman@cox-internet.com>
Message-ID: <tlj98pthq8rcfc@corp.supernews.com>
Source record: 62465

I'm looking for the BEST ears possible in the lower 900's (902-928 to be exact ;->)..... PC control would be great, but not if it means passing up the best performance. I have a Yupi MVT-7100 now, that does a great job pulling in the signal, but has an annoying habit of clipping/distorting some signals due to bandpass limitations (too bad there wasn't some set ch freqs/steps/etc., in this band, but....) on the upper bands. Sometimes, step permitting, wfm mode solves the problem. If the MVT9000 had PC control, it'd be no contest, since it does have speech inverter as standard issue, too. I've heard some grumbling about the AR8600 performance NOT being as advertised, especially HF - and the VR5000 apparently has decent performance, a super band scope, but mediocre scanner capabilities (plus absolute minimal PC control), and both are double the price of the Yupi. Comments please?????

2249. Re: AR8600 vs. VR5000 vs. MVT9000 mkII ????

For an added note: I just returned my second BC780XLT for a refund. I thought the first one was just defective in the 8-900 range, after all it is a Trunk Tracker with prime listening ~860, right? - but as it turns out they're a barn burner 460 and down (with the squelch cracked I was hearing a 460 repeater 80 miles away!), but at 800 and up they not a Bear or a Cat, which must make it a DOG! My Yupi 7100 would have half the bar graph S meter lite up, with great quieting, and the Dog didn't even know something was there (both hooked to a roof discone through a multi coupler - in fact I could even go direct to the BC, bypassing the 3db loss of the muticoupler [actually I think it's even more at these freqs] and it still didn't hear them!)... After about 3/4 the Yupi scale was on, the BC would finally show the first signs of life... Did love the PC control part though!!

Reminds me of when I was setting up my first "household" back in the '60's and had just got a new TV antenna mail ordered from Lafayette (remember them?) that was supposed to be revolutionary! It had elements that stuck out in all directions in sort of a quad arrangement. I mounted it on the chimney, ran the ungodly 6 or 8 conductor cable down to the switch box that changed element arrays to be a "motorless rotor", and sat back that evening to see what I could see. And what I saw was jaw dropping! I had pictures on ALL 12 channels, instead of the usual 2 (this was in Grand Island NE in the 60's remember), and as the night went on and stations went off, another would take it's place! I was in AWE! This had to be the Holy Grail of antennas!! Of course, by the next evening everything was back normal, and I never saw this phenomenom again.............

Not that this answers your question, but I thought it was an amusing tale..(:->))

The media doesn't care. They get, under assorted 'First Amendment' rules,
access to the real PD radios, expensive, but then, media outlets are
generally well off enough to afford them. They get real Astro radios, with
only the 'secret' groups like IA, Narcotics, etc, not programmed in.

2259. Narrowing the field (Long)

Newsgroup: rec.radio.scanner
Date: 2001-07-21 21:47:26 UTC
From: cathexis@erols.com
Message-ID: <3b59f025.1374367053@news.erols.com>
Source record: 62476

Greetings,

Some of you have already read (and helped) with my prior posts. Now I'm asking for a little more help. As a brief recap; I'm Andrew/KG4JBM Gen. class ham, but totally new to scanning. My chief interest is in wide-freq. coverage in general and milcomms (especially milair) in particular. I already own a Yaesu FT-980, modified that'll cover 30mHz literally down to 0.00Hz. So I'm aiming more for VHF/UHF coverage. To the best of my knowledge, existing VHF/UHF "wide-range" Ham tx. will not serve as they lack the scanning-style functions needed for moving targets, etc. I originally assumed that trunking was a must; This has now been corrected by this ng. The scanner I want must be handheld and will most often be used at night, out on the porch relaxing and doing other radio "stuff" like Ham ragchewing, DXing, or just BCB listening. I live in No. VA. about midway between Dulles and Andrew's. Comm'l jets fly over all the time. Mil. flights are more on the QT but at nite I often see them coming and going. I've noticed changes in their activity perhaps in response to world events and I'd like to catch them as they're flying over. (Long paragraph but that's where I'm coming from).

Now to the point (finally !). I'd like your thoughts on the models that seem best to me as well as any comments on blk'd. vs. unblk'd. The models that seem best fitted (and affordable) are as follows:
1. AR8200MKIIB
2. DJ-X10
3. IC-R10
4. VR-500

True minatures are not desirable as they might be clumsier to handle at night. The Yupis seem too pricey though I might include the MVT-7100 but unsure how that rates compared to MVT-7200 and 7300. Another (minor) feature about the AOR model I like a lot is backlighting for nites. I think the Alinco has this also. True? Are there others with this feature that might fit the bill? Right now I lean towards the AOR but it is at the extreme limits of cost for me. The Alinco is better priced but I wonder if it has the "cheap" reputation? Strongsignals.net seems to like the Yaesu and Icom models but rank them a little lower.

Two final comments/questions: Ego says I must have unblocked or else someone I show it to is sure to say, " Oh,...it's -- blocked. " Like you've got the clap. And it would be nice to get the whole spectrum. But how reliable is ordering overseas? Rip-offs? Confiscations? Has it happened to you? Two companies that seem to pop up are Radioworld and Javitation with Javitation maybe a little more attractive. Comments?

I realize this has been a huge post and I'm asking a lot. Still, I think it's all on-topic and I welcome any and all responses to the points I've raised

above. Please accept my thanks in advance.

73,
Andrew

>radio traffic.

This was tried recently in Alachua County, Florida. Public safety in that jurisdiction recently went to a digital system.

When confronted with the possibility of negative coverage by local media, the local agencies will then allow "official news media outlets" to purchase radios which have been programmed for the "approved" talkgroups on their system, and which have had their transmitting ability disabled. This shuts up the media, since they can now once again listen to routine public safety transmissions. But the individual citizen is still screwed, since they still cannot receive the transmissions.

Do not believe the news media's cry of "this information should be available to the public." What they really mean is that this information should be available to THOSE OF US IN THE MEDIA. Once that demand has been satisfied, they quickly drop their campaign for "public access."

A lot of times I will listen for certain accents, to help give me a better idea of what I am hearing. Also listen for counties, roads, interstates, etc... I also use PL tones to help identify who I am hearing, CHP for example has certain PL tones for different sectors of the state.

I think skip is pretty cool indeed. I was on vacation and when driving through west Texas, and eastern New Mexico, I was listening to the California Highway Patrol (39.600 El Cajon/39.400 San Diego) and lots up in the 42 MHz range. Being from San Diego myself, it was really cool to be able to listen to the CHP while in east New Mexico. Missouri State Police was also coming in really good on 42.580, 42.120, and 42.060 (?). I also heard some comms on 39.990 talking about a severe thunderstorm warning had been issued for XYZ county (forgot which county they said). Wish I was able to log all of these, but I didn't have paper handy :(

You may want to check out the eGroup which is devoted to VHF-Skip. here is their website address.

http://groups.yahoo.com/group/vhfskip

Good luck,
Brandon

Because this is a free country where we can have ideas and opinions separate from that which is considered normal.
Anyhow, Halturner simply says what the majority of American Citizens think anyhow.
Its just a thought crime right now to be anti black. It's ok to hate arabs, or pakistanis or whatever
else you want but oh my goodness, hate a black person and it's lights out, everyone goes apeshit on you.
In reality, I don't have problems with arabs, or pakistanis or whatever, I have problems with niggers and that
just the way it is.
You need to understand the severe problem we have here in the USA with blacks, and live in it, then you will
understand why we have such strong feelings against them. They are not only against our dreams and ideals of
how life should be, the are against reality, society, everyone including their own in general.
Indeed the typical american black is a savage beast.

Yeah, you have ideas and opinions, but you don't think. Who do you
think has the most to gain by spamming the "don't listen to the Hal
Turner show" all over usenet? If you don't conclude it's Hal Turner
himself, you're an idiot.

As a former Commanding Officer of a midwestern Naval Reserve Center, I can attest to the attitude some reservists had about joining the reserve program ("weekend social club" or "part-time job with education benefits"). However, as the Chief Engineer onboard a minesweep, I was sent to replace the incumbent engineer on a ship in the Persian Gulf. As a TAR (Training and Administration of the Reserves) officer, I was quite impressed to see that I could not distinguish regular sailor from reserve sailor. If anything, I found the reservists brought with them their civilian experience and skills.

That carried on to my final tour of duty as the Training Officer at the NMCRRC Pittsburgh. While there were some who were hurt financially because of Desert Storm, there were a lot more who contributed greatly to the US Navy.

I would hope that people take a different perspective before they berate the reserve programs and our citizen soldiers/sailors/airmen.

I went from the 7100 to a 9000M3.5 from Bandercom

The 9000 is all as good as the 7100.

7100 may be better below 50 megs.

But the bandscope, 10 pri channels, Alpha tagging and 3 light options
and better speech, make the 9000 a winner.

> My ISP sent me a similar warning.

I'm not so certain that this is a case suitable for treatment as a class action lawsuit; but a simple letter form an attorney admonishing them that they are liable for 'tortious interference with contractual relations" (your contract for services with your ISP), and requesting that they have their corporate or retained counsel contact your attorney direct to discuss suitable compensation ought to get their attention. Just a couple hours of retained counsel's time would be expensive enough to convince The E-Bay Powers That Be that such knee jerk and baseless accusations communicated to a user's ISP is not a good idea. It goes without saying that the name of the party making the original complaint to E-Bay would be immediately discoverable in any lawsuit that might actually be filed. Once revealed, that individual would be obliged to answer for his actions ... in whatever manner or "forum" the aggrieved party felt was suitable or convenient.

You should whore your bum hole on the street during the days "detail".
Then when you get busted you can complain directly to the cop about
him not using his turn signal then place him under citizen arrest.

Hell, you may even make a few bucks if you can turn a few tricks before
you get busted.

You make it sound like the media are going to somehow make use of access
to the radio system without sharing what they learn with anybody else.
It's not as if reporters sit around the newsroom listening to their
scanners for kicks: They want to know what's going on so they can tell
you about it.

This doesn't mean that I don't think every resident should have the
right to hear what the police are up to, I'm just questioning your
suggestion that somehow the media's interest is 100% self-serving. You
and I benefit each and every time a court rules that information should
not be kept hidden from the media.

I don't recall the Navy doing much at all save around the coastal areas.
Mostly they were REMF's and except for an occasional arty support, didn't
provide me with anything. (SEALS excluded)
Aside from the bars and liberty I never saw a Navy person in my AO....but
swabbies didn't get out into the boonies much. They didn't want to get
dirty.

Well said, Lou. Hundreds of reserve and national guard personnel
were also called to participate in Kosovo, as well as many civilian
employees of the DoD. I would like to say they did an outstanding job,
but they didn't. It was impossible to tell them from the regular
soldier or sailor - they all performed equally well.

Airborne!
Had lots of good times at Ft. Campbell. Some on the Kentucky side, others on the Tennesse side since the state line ran down the middle of our barracks. We could get 3.2 beer at the PX for twenty cents a can...never got drunk, but we sure pissed a lot!
Stateside REMF's would not understand...
And then there was Advanced Infantry Training (AIT) at Ft. Benning...and on to Fort Sill for OCS. Life got better while living in the BOQ, but not by much. Damn Arty guys made it impossible to have a quiet evening what with pounding away with the 105's and 155's all night. There was also a darn radar school near the BOQ...two or three hundred yards away...and they loved to train the radar units on the BOQ to watch the overhead flourescent fixtures flicker on and off.
Now days that cannot be done for fear of too much RF exposure...
And who cannot forget going into Lawton, Oklahoma to visit the "clubs"? Old two and three story buildings with a bar on each floor and toothless old women trying to look like vamps?
Life was simple back then. We jumped out of airplanes and wore silver wings on our chests. We were warriors...the best of the best.
Now we are getting old, we have scars, and some of us did not come home, but our wings are still polished and we will always be AIRBORNE!

I agree somewhat, but that wasn't really my point.

When trunked systems came out, public safety agencies thought they would enjoy more privacy. And they did, for a time. Once trunked scanners became available to the hobbyist their next step was to start moving to digital systems to try to gain some of that privacy back. And some have.

The next step in this progression is that once digital scanners become available, an attempt will be made to encrypt radio traffic for that next level of privacy. THIS is when I believe a powerful media presence will step in. NOT on our behalf mind you, but we will benefit from it.

Someone earlier said that they thought digital scanners becoming available to us would be tied up in courts. That is what I was responding to.

Either way, there is still plenty to monitor out there regardless of the digital debate.

Jay

You don't need to sue anyone! <G>

Some newsgroups actually forbid selling, others don't. Many also make a distinction between private, one-off sales, and dealers. All you need to do is bookmark the charter, and point eBay, your ISP, or any other interested party to the agreed upon rules for the group.

Threatening legal action simply gets you off off on the wrong foot.

The best thing to do is to IGNORE his show.
If nobody is listening, then the show will dry up
on the vine and blow away. I would however contact
the radio station by mail (paper letter) and express you
concerns. If you really want to get management's
attention, tell them you will ++boycott++ all advertisers on
the station until the program is pulled. Follow this up with an
e-mail to all the advertisers telling them the station and why
you are boycotting them. Trust me, this plan works 111%
every time.

When checking the site suggested, also note the Boston Center
frequencies - NYC is actually within the boundaries of that
center.

AND you'll hear other aircraft that are at high altitude from other
centers - I live 40 miles north of NYC and I get aircraft working
DC Center on 133.125 and Cleveland Center on 120.625 with
a roof antenna.

Sorry but you are completely wrong redrum/murder.
I've been to South Africa. Whites are raped by blacks daily.
Every morning you wake up and read the newspaper you have
stories about 18 niggers raping little 4 year old white girls and then tearing
her to shreads and all kinds of crazy shit.
Niggers do indeed rape, on a much, much, MUCH higher basis than whites
in both Africa and the USA.

>bought and asked for help, but there is a gutless wonder amongst this
>site and he is just making it bad for everyone else.Thanks

I have no dog in this fight.
I have never bought, or sold anything over the net.
In my mind way too many things to go wrong.
I have never visited Ebay (or any of the similar sites).
FS and FA posts to not bother me, becaue I hae them killfiled and never see
them.
IF they are proceeded wth the FS or FA.
But, I have friends who have bithced about the growing number of FS/FA on this
and mnay other NGs. They feel that this is not a swap shop or flea market.
And, that if they wanted to see a lot of FA/FS they would visit Ebey etal.
Perhaps the grwoong numbe of FS/FA have, in a large part, brought these
complaints by thier own actions. A lot of sellers do not adhere to the FA/FS
protocal, and even those that preceed with FS mean FA.
And face it, we live in a society where people voice thier unhappyness.
And the only effective way to stop people from offereing FA at ebay is to
"turn them in".
Isn't there already a NG for rec.radio swpas and sales?
And if there isn't one that covers FS/FA why not form one.
That way, people who want to buy can see your posts and those who are sick and
tired of FS/FA posts won't be bothered.
Again, before freaking out pull down the last 1000 post and look at how many
are FS/FA and what percentage of FS is really FA. It might offer you a clue
why some people have had enough. And while an ISP might ignore, Ebey can not.
And they make it easy to complain.
This is not a personal attack on you or any other seller.
Just an observation.
In sad truth, given all the other OT crap, a few FS/FA relly don't effect the
overall SN ratio that I can see.
Now if we could just get ISPs to take notice about flagrent OT political
crpa, things might really chage for the better.
And of course there is the never ending war between Pro/Anti-cheeks, although
the man has been dead and burried for a year now.

It is all so sad that there are way too little "scanning" posts in this NG anyway.

Hello fellow radio enthusiasts
I am looking for a decent ALL-MODE handheld scanner along the lines of a
VR500 Alinco DJX-10 Yupi 7100/9000 AOR8000/8000MKII or similar.
I have in way of a trade,
1 Pro 2006 unblocked with 5/12.5/30/50 step size.with manual
2 Pro 2042 unblocked with 5/12.5/50 step size with manual
3 AOR AR-2800 unblocked AM/FM/USB/LSB/CW
covers from 500kHz-600MHz, 800MHz-1300MHz 1000 channels
this is getting on a bit but it is in excellent unmarked condition and works
perfectly. also has manual
4-Uniden BC-890XLT covers 29-54MHz 108-512MHz 806-1300MHz.
AM/FM 200 channels. steps= 5kHz, 12.5kHz, 25kHz. with manual
I will do the AOR for a straight swap on one of the handhelds mentioned
above
Or any two (2) of the others for a top end handheld
please e-mail
thanks
Sean

Just because the man is an idiot, doesn't mean his show should be shut down. The Bill Of Rights guarantees freedom of speech to everyone, even those you don't agree with. If you don't like his message, or are offended by it, DON'T LISTEN TO IT! If you complain and whine you'll probably just encourage him, and then you would be the idiot. Use your brain and ignore people like him. Freedom comes at a price. The only way to ensure our freedom is to give it everyone else, including those who will abuse it with offensive material like this.

Depends on the batteries. I believe the PRO-51 manual recommends 14
to 16 hours for 600 mah NiCd batteries. If you are using high capacity
batteries they will take proportionately longer to charge.

If you use a special charger you can recharge the batteries much
faster than charging them in the radio. Rapid chargers can recharge
your batteries in 1 to 2 hrs.

Depends a lot on the CB antenna. I have used one of the cheap center loaded magnet mount CB antennas with good results on VHF and UHF. A base loaded Radio Shack CB antenna didn't work at all. Some of the newer CB antennas are designed to work at VHF to accomodate the CB radios that receive the weather channels. So try it, all you'll be out is the cost of the adapter to connect the antenna to your scanner.

Whether a radio show lives or dies is based on ratings, nothing else.

>I would however contact
> the radio station by mail (paper letter) and express you
> concerns. If you really want to get management's
> attention, tell them you will ++boycott++ all advertisers on

Fat chance, if the shows' numbers are up there... Look at Howard Stern, he has had more complaints and protests against him than any other jock, all it did was increase his audience and his ratings. Even the FCC couldn't get him off the air...

>Follow this up with an
> e-mail to all the advertisers telling them the station and why
> you are boycotting them. Trust me, this plan works 111%
> every time.
>

Advertisers spend millions in market research to determine who their target audience is. If they are advertising on a particular radio station, it's because that station has the rating numbers and target listener demographics they desire. As long as their advertising is reaching their target audience they could care less about your protests.

Anyone have the active frequencies for Phoenix (city) police? Is it true
they've gone completley digital and can't be monitored?

When the Ca. State Fair starts, would like to listen in to all the activities "behind the scenes" as well as enjoy the fair. Also, there is a hypnotist that appears there every year, can't remember his name, and he uses a wireless handheld. Any ideas on his frequency. Guess city freqs would be useful too. Thanks in Advance for any info. Eric

Though I have some exper. as a Ham, I'm a newbie at this ng and
a newbie to scanning. I'm still shopping around. Upon arrival here it was
made clear to me that a good place to start was:

www.strongsignals.net

That was good advice that put me on the right path to asking myself more
focused questions about what I really wanted. For me, that means a hand-
held. Since the top-of-the-line handhelds (blocked) top out at around 600.00
USA that means I can get those if I pinch a few pennies. True, I'm probably
too novice to use their full potential but I can grow into it and also the more
pricey ones offers lots of after-market add-ons that experienced users seem
to come to rely on.

Frankly, so far I see even the pricey scanners as pretty good deals
compared with Ham transceivers. With the tx.'s you might pay almost as much
and get some Dual-bander with 5W/.5W out and simple scan features even
if wide-range. Myself, I don't even own one. For me, Ham is HF in the classic
sense. But the truth is most, most Hams are into pocket-sized FM tx.'s and
maybe their size is limiting factor on rx. functions. Perhaps this is also a
maipulation of the companies as I don't see much reason why say ICOM or
Yaesu couldn't drop dual-band function into a RC-10 or VR-500. It would be
an incredible package but then maybe no one would be walking around with
a travel case full of "handi-scratchies" that they shelled big bucks out for.

Anyway, enough of my soap-box. This newbie's advice would be to get
the best scanner you can afford since the best ones aren't much more than a
good color TV. Think about it: it doesn't just have to be for listening to the
Blue Angels. It'll get plain old AM/FM and SW Broadcast band as well. You could
practically throw your other receivers away! I hope the web-site and this little
diatribe have helped.

73,

Andrew/KG4JBM

Here is a link with the correct freq's:

http://www.azradiowaves.com/scanner/police.htm

Phoenix have not gone digital yet. All the freq's in that link work with
the exception of the Maricopa County Sheriff's Office which went digital at
the begining of the year.

Hope this helps!

Greetings again,

Is is true that technically it is *not* illeagal to import an unblocked scanner as long as it is for personal use (and of course u won't use the cell. freqs.) ? That it is only illeagal if you intend to resell it? Otherwise no problem. That is, the law applies to *usage intent*. not to mere possession or import.

TIA,

KG4JBM

Under Federal Law; it is illegal to:
import, make or modify a Scanner that will tune Cellular Service Frequencies.

The law does not exempt anyone save for Law Enforcement and Cellular Service
Co's.

Cops can only tune Cellular with a Warrant.

Intent matters not, if you modify, make or import a Cellular Able Scanner the
law is broken.

I would suggest scanning the FCC-designated itinerant frequencies:

http://www.aosc.org/dots.html

http://www.crosswinds.net/~scannernet/dot.html

http://www.fordyce.org/scanning/scanning_info/lp_freq.html

http://www.bright.net/~wbowery/itin.htm

Also, check the local law enforcement frequencies, because you might hear them patrolling on the fairgrounds.

Good web-site! Thx. to you and PB Scanner for responding.
The reason for the question was a Google Search on this ng that
gave the above info from '97 or thereabouts. Either hogwash or the
law has since changed. Thanks.

Andrew

Scott, silicon the heck out of all your connections. It is cheap and easy
get the type you use with a caulk gun put it right over the connectors,
bolts etc, don't be afraid to put it on thick and mold it around your work.
After it has been used and you need to get the connector, etc off, it will
peel right off and provide a sure fire weather proof connection that is
cheap, easy, and will last for years.

You can get what is called Coax Seal. It is sort of a thick rubber like tape that will mold itself to the connector. It can be removed without much difficulty if you have to years later. If you have an electrical supplier near you ask for some Stuff made by 3M They make some Scotch 130C that is about the same size as electrical tape. It is just somewhat thicker. Also is some Scotchfil that will do the same job but it is about 1/8 inch thick. YOu wind either around theconnectors just as you would tape, the put a good grade of Scotch tape over that.

I forgot the number of the Krylon spray paint but they make a clear coat that you can spray over the connectors and joints that hold up for a while. Don't use just the regular paint where the coax or traps connect unless you are sure that is an area where painting does not mater if is it conductive.

I would be very careful before using silicone on coax. SOme brands
have a chemical that leaches into the braid and will ruin it. The
silicone that you smell an ammonia like odor is the culprit.

I have switched to coax seal for water proofing and find it works
great and isn't messy like sealants. Stuff comes on a roll like thick
tape. You wrap the connector and then hand form the stuff to seal it
up good. Easy to remove.

Glenn

I made my own. Connect a one inch piece of wire to the center connector of a BNC. Wrap with tape to protect it and that is it. It works great. I've used it each week for the past two months at Charlotte, NC at the Loew's Motor Speedway. There is now zero intermod and bleedover and full reception on the primary channels.

Source record: 62374

This is a 50 channel programmable handheld scanner which covers VHF low, VHF hi, UHF & T band. The PRO-70 comes with original box and owner's manual and a Radio Shack telescoping whip antenna. Cosmetically, the scanner is an 8.5 on a 10 scale. It has had very little use over the past year because my state has moved to an 800 MHz trunked system. $45.00 plus shipping from zip 84404, and payment must be received within 10 days. SERIOUS INQUIRIES ONLY, please. If you don't intend to follow through and purchase the scanner, please don't waste my time and yours. Thanks and 73, David. R8500@aol.com

Not on the existing 2006 display. However, you can add an interface board such as the Optoelectronics model and connect it to your computer. There are several software packages that will allow tagging channels and so on that way, through software on the PC.

Hi,

I have the NJSP Troops B and C systems programmed on a PRO-92.

You set Block 0 to S13, which also fills up blocks 1, 2, and 3 as
S13. Then you set Block 4 to S13, which also fills up block 5, 6, and
7 as S13. There is no block specifically set for S0. The type II
transmissions all come in as talk groups 000-13 or 400-12, and are not
tracked with their Type II talkgroup IDs.

To track the Type II talkgroups, in the PRO-92 you have to program
another bank as a Type II bank. And then input the Type II talkgroup
IDs you want to track.

Email me if you have further questions.

Walt

Hello, im currently selling the following scanners, all are in MINT MINT condition inside/out, I do not have any pics, (my p.c. cant do it) the 1st is a Regency MX7000 20 channels, 25MHz-1,300MHz coverage + CELLS, the 2nd is a Realistic Pro-2004 400 channels 25MHz-1,300MHz CELLS, (the mods were done by commtronics) AKA bill Cheek. and the 3rd is a Radio Shack Pro-2042 1,000 channel, CELL IMAGES (on the 1,100-1,200MHz) range.....as I stated earlier, all scanners are Like New, MINT condition, inside/out they come with manuals, and the MX7000 also has its box still. price for the MX7000 is $100.00 you pay ship, the 2004 price is $210.00 I'll pick up ship, and the 2042 is $199.00, and I guess I'll do the same for it as well (ship). Hope you all have a good day, and please send all offers/questions/comments, directly to my e-mail address ONLY, I cant scroll trhough all the things im listing daily (I hope you understand) Thanks, Regards, Frank.

Hello Group,
I am installing a new quality 25-1300 Mhz Discone antenna on a 15 foot mast on my rooftop, and already have RG6 cable from a previous DSS installation. Is it worth the extra cost to replace the RG6 with RG 8/U for my lead-in from the antenna? I will most likely have 80 ft between the antenna and the opposite end of the antenna lead-in cable. It sounds to me as if I will have to install PL-259 Male connectors on each end of the antenna lead-in cable if I use RG 8/U. From the opposite end of the antenna lead-in, I am thinking of connecting the PL-259 Male to an SO-239 to "F" adapter to connect to a distribution switch. From this distribution switch, I will go out to three other RG 6/U cable spans (under 50 feet each) to connect three rooms to this distribution switch and antenna. This distribution switch, I feel, will be better than a splitter, because I can connect each room individually to the rooftop antenna at will by selecting the specific room on the switch, and hopefully avoid the db losses that occur with splitter connections. I'm thinking that with this setup I can move my Uniden BC780XLT to a room and select that room on the switch to connect to the antenna. As I mentioned before, I will most likely use RG 6/U to connect from the distribution switch to each room. Does this sound like a good plan?
You can reply here or at a2stepper38@hotmail.com

In theory it should be just fine considering the distribution block is rated up to 1GHz. Keep in mind that every connector will have some loss so buy quality and keep them to a minimum.

Some people will argue that you should not use 75 ohm coax on a scanner but it work just fine.
Read my "Coaxial cable guide" to compare loss.
http://www.webdeals.net/coax.htm
RG-6 is better that RG8U coax in terms of loss on the higher frequencies. If you decide to upgrade to a 50 ohm coax, I highly recommend 9913F for all scanner and radio applications. It cost from 60 to 80 cents a foot and well worth it. The loss is very low at 1GHz (4.5db @ 100 feet). Since you already have the RG6, I would use it since it's rated (6.1db loss @ 100 feet on 1GHz)

I just raised my Discone from about 20 feet to 35 feet. It's on my tower now with my other scanner antenna.
Here is a picture of it: http://www.webdeals.net/newantenna.jpg
I have noticed a big improvement on far off signal now. I am using 1/2 inch hard-line on the discone antenna while the Channel master has RG6 rated at 1GHz on it. The Channel master is much better on low band while the discone is better on 144 and 800 MHz frequencies. I keep the Channel master on the Icom PCR-1000 and the Discone on my Radio Shack Pro-2021 most of the time.

Dan, you ought to do yourself and those you make recommendations to a
favor and try out some LMR-400. It has better loss figures
(http://www.timesmicrowave.com/cgi-
bin/byteserver/products/commercial/selectguide/LMRGuide.pdf)

(just barely) than the 9913, is easier to work with and cheaper. I
have no connection with these folks, I just have been using it for
some time and the stuff is great.

Give it a shot sometime and you will see what I mean.

> I just raised my Discone from about 20 feet to 35 feet. It's on my tower now

FOR IMMEDIATE RELEASE:

CONTACT:
either
Scully: Scully@cipherwar.com
or
Michael Teetering: Teetering@cipherwar.com

Global Monitoring System, ECHELON, has its day. Jam Echelon Day October 21st

THE INTERNET - July 25, 2001 - A large group of individuals in the Global Internet Community have set out to bring attention to the communications monitoring system known as ECHELON.

Two years ago, when this idea was launched, the existence of ECHELON was denied by all of the participating agencies. Now with the recent issuing of the report by the "Temporary Committee on the ECHELON Interception System" its existence and invasive practices are no longer in doubt.

We are urging all persons who utilize any form of global communication to inform their circle of friends regarding ECHELON and its monitoring of all email, telephone and fax communications in Europe. Along with this we are urging the inclusion of as many 'trigger words' within those communications as possible.

To this end, we have established a primary web site at: http://cipherwar.com/echelon and numerous mirror sites around the world to help educate people about ECHELON and what it really means to the Global community at large. (Partial list of site locations below.)

October 21st has been designated "JAM ECHELON DAY" and on that day we are encouraging email messages to be sent out in great numbers, containing as many 'trigger words' as possible. (There is a list of 1700 on the web site.) While the goal of "jamming up" ECHELON is a lofty and likely unattainable one, is it not better to signal displeasure at being monitored than passively allow it to happen? We think so.

Now is a chance for anyone, regardless of computer expertise, to become an instant hacktivist - and all you need is your regular email program and the desire to stand up and count.

After October 21st, we ask global netizens to merely stop censoring themselves for fear of scrutiny. If the bulk of monitored hits becomes too great, the effectiveness will drop to the insignificant. A proverb from Madagascar states; "Cross the river in a crowd and the crocodile won't eat you." Although that may not be completely true, we invite you to join us.

The Jam Echelon site may be found at the following URL's
cipherwar.com/echelon, echelon.oregonwebdesign.com,

2398. 780xlt problem (sort of) can I fix this myself?

Newsgroup: rec.radio.scanner
Date: 2001-07-26 04:50:44 UTC
From: Greg <king.frost@home.com>
Message-ID: <a78vlt84rjvg61ilu4k1ckcifuk2mcvg1f@4ax.com>
Source record: 62315

I have got a little appearance problem with my 2 month old BC780xlt... It appears as though between the plastic faceplate and the lcd screen behind that, there is some sort of foam rubber padding. Some of this stuff is starting to slip down in front of my display. So car it's still above any of the information displayed, but I'd like to fix it before it falls down any further and covers something. (Not to mention it doesn't look "perfect" now and it bugs me :)

Has anyone taken their 780 apart yet? Think this is something I can handle fixing? Or do I need to send it in to Uniden, or can I take it somewhere for fixin?

Division radio refers to the division the precinct is in. Staten Island is in the 35th Radio Division. You have division radio which is the local precincts and citywide radio which are radio frequencies that cover the whole city for such units as Emergency Service, Highway, Bomb Squad, Hostage Negotiaters and High Ranking Supervisors

OK, where in California are you? Most areas use a 42 or 39 MHz
channel. It all depends upon which division you're in.

If you're using a handheld with a rubber duck antenna, you have your
answer. Those antennas do not work well at all on low-band. Get a
telescoping antenna at Radio Shack for 10 bucks.

Divisions have been renamed zones but by habit many will still use the phase divisions. Today NYPD has 35 dispatch zones using 37 frqs. Each zone has 2-3 pcts on it.(76 Patrol Pcts in NYC) Manhattan has 9 Zones, Bronx 6, Brooklyn 11, Queens 8, and SI 1.
In additiona you have 4 Citywide frs, SOD, Traffic, etc. NYPD uses at least 55 uhf frqs.

The CSP is currently using a full-digital trunked system. Some areas
were simulcasting on the well-published 42 MHz freqs, but most have now
stopped.

Barry

: every major city had paid police officers, and soldiers had been paid
: as far back as the Revolutionary War, when that Amendment was proposed
: and ratified?

Simple, the 2nd amendment was about every male, if
fit, serving. What we have today is a mercenary force.
Especially in the minds of the liberals and the yuppies.
Their basic argument is that those who serve chose
to do so therefore they can die to protect the more
valuable members of society (liberals and yuppies).

The left has pushed the idea that paying taxes is caring.
Like Scrooge, they feel that it is government's job to
care, not theirs.

: N9N has a hard-on for the draft. EVERYTHING ends up being a
: reason for the draft.

I believe that best way to fight the gun paranoia in America
is to put a gun in the hands of as many males as possible.
Mandatory service will do that.

It will end the willingness of the left to send the military overseas
if their sons have to serve (most children of the leftists do not
serve and have not since 1975). Likewise the yuppies like the
idea that someone else is suppose to die for their worthless asses.

It seems unfair that a handful serve. It is like the rich, educated
leftists are not paying their fair share. Then the very people who
serve are told by the leftists that they are not as worthy as the
elite graduate school leftists.

With respect to how the educated left and the yuppies treat
the military, they are assumed to be mercenaries. The educated
elite in America expect the cops and the military to die for them.
As if those who serve are somehow inferior.
```

The Founding Fathers via their readily available letters and
speeches.

> : And how do you explain the fact that almost
> : every major city had paid police officers, and soldiers had been paid
> : as far back as the Revolutionary War, when that Amendment was proposed
> : and ratified?

First off, there were *no* paid police officers in the USA when
the Constitution was ratified and the constitution specifically
forbid funding any army for more than two years. Read it. You'll
be astounded at how much of what the government currently does
is actually illegal. Licenses? They were referred to as "titles
of nobility" and are unconstitutional.

It depends!

My local PD shares a frequency with a PD about 20 miles away.
Marginal, noisy, and annoying reception from that other PD. By making
use of the PL (read CTCSS) feature, I can eliminate that annoying PD's
transmissions. So in this case, yes, it is worthwhile. I have also
activated the PL feature on other channels, but its utility is
marginal.

So, as I said, it depends upon your situation.

Walt

There is no rational basis for your belief. There have been
plenty of countries that have had both conscription AND extreme
gun control. If your theory held water, this wouldn't be true.

>It will end the willingness of the left to send the military overseas

>elite graduate school leftists.

If the U.S. wasn't trying to maintain a global police and
meals-on-wheels presence, it could do just fine with a small cadre
of regulars backed up by state militias- all volunteers, just like
it did prior to WWI. It is this American global presence that you
should be trying to end, instead of spending your usenet electrons
pushing your Spartan-state conscription idea. Make membership in

state militias once again a prestigious position, like membership in the typical small town volunteer fire department is, and you'll accomplish a lot more in the fight against gun control than you ever will pushing your conscript-manned global power system.

As I've already explained, "police officer" was perhaps not the correct phrase to use, but there ware paid law enforcement personnel, using various titles (sheriffs, constables, and so forth), in every major city, and in many small towns, throughout the United States when the 2nd amendment was proposed and ratified.

Second, the constitution does not forbid funding of any army for more than two years - it forbids an appropriation of money for that use for longer then two years (article one, section eight). In other words, it sets a time limit on any single appropriations of money, not a time limit on an army. Once that time limit is up, additional money can be appropriated for that army.

> Read it. You'll be astounded at how much

Go back and read your history books again. Licenses of merit (e.g. those earned through work or skill) were not considered "titles of nobility." Only those licenses granted without merit (e.g. those gained through reward or privilege) were referred to as "titles of nobility." A ham license is not a "title of nobility," so a ham license is not unconstitutional.

>-BHall

I have monitored police setting up personal drug buys on their departmentmental trunked radios. I hope that more people set up scanner/I-net sites. That ought to liven up the world.

: >: >get all of that from? And how do you explain the fact that almost
: >: >every major city had paid police officers, and soldiers had been paid
: >: >as far back as the Revolutionary War, when that Amendment was proposed
: >: >and ratified?
: >:
: >: N9N has a hard-on for the draft. EVERYTHING ends up being a
: >: reason for the draft.
: >
: >I believe that best way to fight the gun paranoia in America
: >is to put a gun in the hands of as many males as possible.
: >Mandatory service will do that.
:
: There is no rational basis for your belief. There have been
: plenty of countries that have had both conscription AND extreme
: gun control. If your theory held water, this wouldn't be true.

Outside of Holland, which has some other weird practices like
legal pot smoking, killing old folks and an union for the military,
most of Europe that has the draft also has very pro gun laws. This
especially true for the German speaking countries that are very pro
gun. The Germans, the Austrians and the Swiss have as much
gun ownership as we do. However, they make everything hard
to (fishing licenses and drivers licenses are expensive and hard
to earn).

: >It will end the willingness of the left to send the military overseas
: >if their sons have to serve (most children of the leftists do not
: >serve and have not since 1975). Likewise the yuppies like the
: >idea that someone else is suppose to die for their worthless asses.
:
: Now THERE you might have something.

That is the real point to my arguement, they are not
paying their fair share.

: >It seems unfair that a handful serve. It is like the rich, educated
: >leftists are not paying their fair share. Then the very people who
: >serve are told by the leftists that they are not as worthy as the
: >elite graduate school leftists.
:
: If the U.S. wasn't trying to maintain a global police and
: meals-on-wheels presence, it could do just fine with a small cadre
: of regulars backed up by state militias- all volunteers, just like
: it did prior to WWI. It is this American global presence that you
: should be trying to end, instead of spending your usenet electrons
: pushing your Spartan-state conscription idea. Make membership in
: state militias once again a prestigious position, like membership
: in the typical small town volunteer fire department is, and you'll
: accomplish a lot more in the fight against gun control than you
: ever will pushing your conscript-manned global power system.

Agreed. There is little pride in serving in the military. For one thing, it is too easy to get in. Needs to be more elite. The elite in society are not willing to do anything that the common man can do. That is the biggest reason behind gun control, that they want to make gun ownership something that only the well educated can do. Voting is down as well, now that the franchise has been opened to the masses.

The thing to remember is that very few now live in the rural portions of America. Most of the folks live either in the cities or in the suburbs. These folks have no one to train them about guns, like their grandfathers had. Much of the life skills that the farm boys had are now mostly forgotten.

I see military service as providing the training that our grandfathers received from their dads. It is really too bad that society has gotten this bad.

: The Founding Fathers via their readily available letters and
: speeches.

Many are part of the Federalist Papers. I do not
understand why the Federalist Papers are not studied
in school, especially at the university level.

: > : And how do you explain the fact that almost
: > : every major city had paid police officers, and soldiers had been paid
: > : as far back as the Revolutionary War, when that Amendment was proposed
: > : and ratified?
:
: First off, there were *no* paid police officers in the USA when
: the Constitution was ratified and the constitution specifically
: forbid funding any army for more than two years. Read it. You'll
: be astounded at how much of what the government currently does
: is actually illegal. Licenses? They were referred to as "titles
: of nobility" and are unconstitutional.

On both accounts, true. The militia was the posse, the fire brigade
and the military. And licenses are much like the grants of land and
power given to the nobles.

2434. Re: ECHELON

Newsgroup: rec.radio.scanner

Source record: 62198

Hhmmm,.....

You know there's room for comment here regarding ECHELON.
Right off the bat I could ask how the NSA's "listening-in" on everybody
is all that different from what we do as a hobby -- that is, listening in on
everybody in the clear betw'n 530kHz. and 2.0+ gHz. The NSA is bad?
Why? Because e-mails are somehow more sacred than cell-phones??
Seems rather hypocritical.

I do agree that private comms. are, or should be considered, more
inviolate than the activities of "public servants", but it is kinda hard for me
to think of a way to protect *all* the citizens and catch *all* the bad guys.
The real issue with NSA is not it's technical abilities, but rather with the
political oversight of NSA. Questions that should or could be rightfully asked
of NSA could include:

1. Have they used these abilities on private citizens without real probable
cause? (Violates I and IV amendments)

2. Have they used their abilities for personal or political gain of those in
power? (Corruption)

3. Have they used these abilities to grant unfair advantage to favored
contractors at the expense of other legitimate businessman?
(Corruption and denial of Free Trade, Fair Business, etc.)

These are all legitimate questions that could be asked of any Intel. agency.
But what is to be gained by flooding their software filters with an overload
of "trigger words" ? Assuming such filters exist on the level needed to make
such a protest effective.

How really different is what ECHELON is said to be capable of from
what scannists do every day? Just because it's "e-mail" over a cable hookup
instead of "radio" over the airwaves doesn't give it any sacred status. I will
admit there are strong arguments on both sides- yes. But consider this;
When Police and Fire got tired of being monitored they didn't ask the FCC to
make scanning itself illegal, they just went to digital and made the issue moot.
Flooding these (supposed) filters with "naughty words" seems unproductive
and adolescent. If you really want to ratttle the NSA you ought to instead get
millions and millions of people to start sending all their e-mails in PGP
instead. Now that would make them *really* nervous.

Greetings,

I was at the movies today ("Jurassic Park 3") and I
noticed everybody working there carried two-ways. I intend
to buy a wide- range but not a trunked scanner as soon as
friday maybe. Can you tell me if these radios are trunked or
not?

Description:
Motorola Model: HTx50 (not sure what x was - a number)
A "channel switch" on top that had settings for 1 and 2.

Can U ID it?? Tips on the freq.?

TIA,

Andrew

2436. Registration Name and Password Needed for Pscan MR8100 Scanner Software

Send an enormous swarm of emails to an agency you are paranoid is monitoring all communications? Great idea...better yet why not just send a stamped self addressed envelope, with an accompanying letter, asking to be added to the register of suspected subversives. Whatever happened to being the grey man? Far more effective. Always assuming you give a toss that someone is monitoring you.

I just got a Drake SW8 in excellent cond. with very nice case, latest version, $535 + shipping. Will consider trade for MINT Drake R8, R8A, R8B, or ??? Also have to trade Sony 7600GR like new and Bearcat UBC 3000XLT unblocked handheld scanner also like new. The SW8 has awsome audio, but I want finer tuning for SSB.

CTCSS is also good for folks in high RF environments. If you live in a major city, it might come in handy blocking out those pesky paging tone bleedovers.

ID Tracker V1.1.0 is now available.

New:

* Enable/Disable New ID Alerts
* Set a minimum active time for ID logging.
* Updated web page documentation.
* Fixed a problem that may have prevented the Alert.wav
file from been played for new IDs.
* Fixed a few minor problems with logging which may not
have been apparent in the previous version.
* Minor changes on the main screen.

I am getting a Uniden BC780xlt scanner and am wondering what would be the best software for it. I know this question is subjective but I am interested in the pro's and con's for the different softare and also the web addresses for for the manufacturers.

Thanks for any assistance you can provide.

How would a base unit, roof-mounted antenna work with a Radio Shack PRO-92? If it will allow me to pick up more frequencies then i will purchase one. thanks.
PS: any recommandations on a base antenna??

Jay

2459. Need info: Uniden Beartracker BCT-10

Newsgroup: rec.radio.scanner
Date: 2001-07-28 05:16:13 UTC
From: Gary B <gbreuner@hotmail.com>
Message-ID: <P_q87.2295$jy5.25963641@news.sisna.com>
Source record: 62226

Hi,

I was wondering if there was a web site that anyone might know of that has more detailed information on the Beartracker BCT-10? I picked up one used (no manual of course) and was just wondering about some of the more basic features. Anybody really familiar with the model that can answer some questions...?

1. Is there a way to "reset" the scanner to factory original condition?
2. What do the different LED's on the scanner specify (SR/HP/LR/LP)?
3. What is the "XX" state designator stand for? (scan all freqs?)
4. What is the primary function of the "Alarm" button?

Any help would be appreciated. Uniden wants $7.50 + $2.50 for shipping for the manual for this thing, and having seen a few of their manuals over the years, I think that's just a tad steep...

Thanks in advance,

Gary B

Of course it would help. I use my base antenna with all of my scanners, handheld or base.
The ideal antenna for you depends on what you'd like to listen to. Also don't skimp when it comes to low-loss coax, especially for 800MHz+ listening.

So it's only two months old; I would send it to Uniden under warranty
service. I know the problem seems simple, but if something breaks if
you try to fix it, and then you really need warranty service for some
other problem, your in deep do do. :-)

Hello, Folks. I have posted here a few times concerning some Long Island frequency questions as well as some scanner tech questions. I have found the information that I received to be of much help. As such, when my next question arose, I knew just where to come. To you folks. My questions is this: I have found several sites on the internet listing frequencies for cordless phones, baby monitors, radio stations, etc, however, often times when i try to enter the frequency into my PRO-92, it will say "invalid frequency". Now I know my scanner has several "srttings" if you will. MO,ED,AM,FM,PL,DL,LT. All I am knowledgeable about asfar as these go is the MO which stands for MOTOROLA. If I wanted to enter in somecordless phone frequencies, or say Plum Island security which is listed as 36.43, which one of these codes would I enter it under? Thanks for all your help!

I am thinking the same thing. I wonder how long it'll take to fix.
Maybe I'll send it off to them before I go on vacation - and hopefully
it'll be back around the time I come home :)

2486. How to hear 900Mhz cordless on Icom R-10 ?

I live where listening to cordless is still legal.
Can the R-10 hear them, do you set it for SSB?
Are they intelligible, if not can connecting an outboard voice
inverter make them intelligible?
Who makes such an inverter, will the one from Ramsey electronics do?
Any others?

You can't get it shipped to you for anywhere near $150.00 that's assuming it gets through customs.

Or do you have a receipt from the one you bought?

The Plantronics and V-Tech both use standard NFM.
No digital,(except to establish link and for dialing) and no inversion.

2491. Help with GE 7-2975A scanner

Hi all. I picked up a GE "Searcher 2 plus 2" scanner today.

It's a relatively large AM/FM portable radio, with a 6 channel VHF/UHF scanner built in.
No crystals, no synthesizer, but each channel is tuneable.

It's pretty neat, but is only scanning channels 3-4. The rest act like they're turned off.

Anyone have a schematic for this beast? It would be fun to get it working again.

Thanks.

John KB5AG

Hi Jay,

For the most part, all information you receive over your scanner is in FM mode. Some exceptions to this rule are the airport and aircraft range of 118-136 and the military range of 225-400 (or so) MHz - both of which use AM.

I would advise you to read through at least the basic usage section of your scanner's manual, check out the Strong Signals website, and possibly subscribe to a radio related periodical or two such as Monitoring Times or Popular Communications. Another good source for basic scanning info is the first section of Gene Hughes' (sp?) Police Call frequency directory, available at your local Radio Shack or online from various resellers such as Grove (www.grove-ent.com).

Toscano wrote in message <9ju94u$j3i$1@slb6.atl.mindspring.net>...
>Of course it would help. I use my base antenna with all of my scanners,
>handheld or base.
>The ideal antenna for you depends on what you'd like to listen to. Also
>don't skimp when it comes to low-loss coax, especially for 800MHz+
>listening.

Excellent answer, seconded by me. Cost-effective wise, the best
things you can do to improve your 'shack' is work on your antennas - check
the connectors, upgrade your co-ax, get 'em as high as possible.
As to a specific antenna, I like my Radio Shack Discone. It's a good
general-purpose scanning antenna, it'll function with an appropriate
transciever for transmitting, and it's cool-looking. ;)
BUT, as Toscano says, it depends on what you like to listen to, too.
If you spend a lot of time on one band, you might be better off to invest in
a quality roof-top antenna for that, and a cheaper, general purpose antenna
for other use. Don't overlook making your own antenna, especially for a
specific frequency range. If you're handy at all (handy enough to put an
antenna on the roof, I'd say) you can cobble together something that'll work
as good, if not better, than a store-bought.

So what? you'd rather the IRS just keep it? I can do more for me
AND the economy by freeing up that money now. Unfortunately for the
economy I decided to send it to England instead. <grin> Besides, even
if all it is a one-year no interest loan it's still a world more than that
stiff-necked Boob, Gore would've given us.

I gotta say that right now I don't see a whole lot of any freedom in
the traditional sense in the places gov't seems headed. With Gore you'd
be choked with so many regs. that going on-air would need an Impact
Statement first. With Bush, we're liable to see freq. spectrum auctioned
off from UHF Ham Bands unless we get a "Goldwater" in office who'll
use influence to protect us. Don't see such a creature right now.

>Thanks again to our esteemed legislators for NOTHING ! (The same

ECHELON is actually a great deal more than an e-mail sniffer. It's a multi-national wide area network linking the NSA computers with those in Australia, the UK, Canada and many other nations. Suggested reading:

"Body of Secrets" by James Bamford, the sequel to "The Puzzle Palace"

Great reading at 30 bucks a pop in hardcover. Many cool intercept cases. Scanner buffs will love it, though it's a little political at times and rips Israel big time - the Liberty incident.

Happy Scanning! - Ted Moran

I'm considering installing a good quality (Antenna Specialists APA 874.3M) On Glass cellular antenna on my vehicle to use only for monitoring my local 800 Trunking systems. I would simply connect the antenna to my mobile Trunk Tracker scanner.

Anyone have much experience using On Glass antennas for monitoring ?

Thanks,

Geo

2504. SAR Specific Absorption Rate RF Microwave Radiation

Newsgroup: rec.radio.scanner
Date: 2001-07-29 08:23:36 UTC
From: rfsafe@intnet.net
Message-ID: <70247cdc.0107290023.65f53011@posting.google.com>
Source record: 62270

SAR (Specific Absorption Rate)
The thermal/non-thermal dividing line currently used as the basis for safety standards of radio frequency radiation exposures (SAR) is no more than a "red herring," a distraction from our understanding of the actual health effects of microwave radio frequency radiation and therefore our ability to protect the public.. It increasingly appears invalid to distinguish ionizing from non-ionizing radiation with respect to their health effects. Please Get Involved, Do your Research & PROTECT YOURSELF NOW!

SAR tests are theoretically acceptable human body radiation absorption simulations that measures temperature (thermal) increases, rather than a cell phone's actual microwave radiation emissions in decibels (dB). RF Safe - SafeCellularPhones.com does ALL its safety product tests, measuring actual cell phone radiation. Simply put, If you are not exposed to rf radiation you are in NO danger from RF Radiation!

To date, the effects of cell phone radiation upon cells and biological mechanisms in the body are being debated worldwide, as are the SAR standards themselves. More and More Proof is piling up proving cell phone radiation very dangerous far below levels of heating that are measured in SAR testing! Many Organization Now Insist SAR is Inadequate for imposing Safety Guidelines!.

DO NOT Assume Any Level SAR To Be Safe!

Accepted FCC SAR standards were set by engineers, not by Doctors or Scientist familiar with the human body!

SAR tests only measure heat or thermal increases in temperature, while many studies have proven microwave exposure to be very dangerous to biological systems far below levels of measurable heating with current SAR testing procedures!

Bottom line is a new method of testing must be used to simulate human microwave exposure as current SAR measurements have proven very inadequate for setting guidelines for safe levels of Microwave RF Exposure!

Read what RF Safe has to say about Cell Phone SAR and safe levels of RF exposure! At www.rfsafe.com/list.htm also all the SAR levels fro cell phones are listed

>these buttons do I would appreciate it.
>The buttons are: Auto and SND???????
>Thanx a bunch
>

I still have a BC2500XLTthat I use in a few applications. Let me
first mention that I think this scanner was Uniden's first attempt at
a feature-laiden hand held scanner, but the radio suffers from a
number of problems including a considerable amount of birdies, images,
and intermod distortion.

I only mention this because some of these problems will most likely
give you less then satisfactory performance when using the Auto Store
function because many of the channels stored in the bank(s) you
select may be filled with bogus junk.

Well, that said here we go:

1. The AUTO key activates the Auto Store function. You can select
a bank or banks and during the search function, automatically fill
them with the "active" channels found. You put the scanner in manual
mode, then set your upper and lower search limits. You then press the
AUTO key and all the bank numbers will flash. You then select the
bank or banks to be auto stored. (If a bank is full then "FULL" will
appear in the display.) Now you press the SRC key and the bank(s)
will fill as frequencies are found. The "FULL" message will then
appear when a bank has been filled.

2. The SND key is basically used to send a frequency that you found
using the VFO (Rotary tuner knob) or search function to a specified
channel number. You press SND twice, and the channel number
blinks then you enter the desired channel number. You should then
press the HLD key to insure the channel you want is empty. Now you
press E(nter) to send the frequency to that channel.

(The manual may still be available from Uniden.)

Hope that helps.

Not having either I can not say for sure.
But if the keys are anything like a lot of radios, you can fix it.

It takes opening them up and disassembling them to the point of the keyboard.

I used a silver content pen used for repairing circuit boards. After cleaning the key surfaces (most are rubber pads that use the resistive coating to make connections across circuit boards traces) with alcohol or similar non aggressive degreaser. After the key pads dry, I coated the pads with the silver . After 24 hours drying I reassembled the radio. The keys now work.

Just Be careful disassembling as this may require unsoldering wires that Must be resoldered back where they came from.

Just my 2 cents.

Global Monitoring System, ECHELON, has its day. Jam Echelon Day October 21st

THE INTERNET - July 25, 2001 - A large group of individuals in the Global Internet Community have set out to bring attention to the communications monitoring system known as ECHELON.

Two years ago, when this idea was launched, the existence of ECHELON was denied by all of the participating agencies. Now with the recent issuing of the report by the "Temporary Committee on the ECHELON Interception System" its existence and invasive practices are no longer in doubt.

We are urging all persons who utilize any form of global communication to inform their circle of friends regarding ECHELON and its monitoring of all email, telephone and fax communications in Europe. Along with this we are urging the inclusion of as many 'trigger words' within those communications as possible.

To this end, we have established a primary web site at: http://cipherwar.com/echelon and numerous mirror sites around the world to help educate people about ECHELON and what it really means to the Global community at large. (Partial list of site locations below.)

October 21st has been designated "JAM ECHELON DAY" and on that day we are encouraging email messages to be sent out in great numbers, containing as many 'trigger words' as possible. (There is a list of 1700 on the web site.) While the goal of "jamming up" ECHELON is a lofty and likely unattainable one, is it not better to signal displeasure at being monitored than passively allow it to happen? We think so.

Now is a chance for anyone, regardless of computer expertise, to become an instant hacktivist - and all you need is your regular email program and the desire to stand up and count.

After October 21st, we ask global netizens to merely stop censoring themselves for fear of scrutiny. If the bulk of monitored hits becomes too great, the effectiveness will drop to the insignificant. A proverb from Madagascar states; "Cross the river in a crowd and the crocodile won't eat you." Although that may not be completely true, we invite you to join us.

The Jam Echelon site may be found at the following URL's
cipherwar.com/echelon, echelon.oregonwebdesign.com,

>Any others?

If it's on 900mhz and is not coded or scrambled or anything like that,, the
R-10 will pick it up. Try FM-N.

Generally a good radio. I prefer it to the R2 for ease of use.
It's been on all my vacations to monitor local freqs.
HF filters are too wide for SWL. Battery life is OK with
alkalines, but crummy with Nicads. Also look at the Yaesu VR500,
which is a newer design and smaller.

2513. Scanning 867MHz with IC-R7100

Newsgroup: rec.radio.scanner
Date: 2001-07-29 11:14:31 UTC
From: RadioFan <rf@go.com>
Message-ID: <9k0uam$b6b$1@bob.news.rcn.net>
Source record: 62280
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi,

I am trying to scan my local trunked police service on 867MHz, and my IC-R7100 doesn't stop on freqs when there is a signal. I can hear that there is audio for that 1/10 of a second (or however long) when the scan is on a freq with a signal, and the BUSY indication flashes at that same time, but the scan does not stop to allow me to listen.

Anyone have any ideas?

(It performs fine on the aero band and lower police bands.)

Thanks!

To put it simply *brilliant*
Best handheld receiver around (its not a scanner, its a communications receiver), Certainly kicks the butt of any of the AOR's or Yupi's, not very fast at scanning I grant you, but it is one hell of a radio. Loads of features and works exceptionally well even on the stock antenna, but stick a discone or scanstick on it and it is SUPERB. I wouldn't part with mine at any price, (OK maybe for an Icom 9000 I may be tempted)
regards

I had the "buttons stopped working" problem on my AOR 1000XLT. I talked to
the address below and they sent me a new key pad for $5.00 plus shipping.
You do have to take the radio all the way apart to replace it, but I was
real carefull, did it myself, and now it works great. I did this in Jan 1997
and it is still going strong.
This is where I ordered from:

Hi
Why are you getting rid of Winscan???? has it anything to do with this
message on yahoo groups uniden bc780xlt.?????????

Snip
>>
I called and they told me to go to their website and look under downloads,
then download the Patch for this program and run it. Follow the directions
then you can run the disk. I am getting rid of WINSCAM and getting Trunkstar
this week. Some of the functions dont work and the directions are weak. The
directions tell you to just press the update button, but it doesnt always
work. I found about 10 serious flaws inthe program.

I haven't had a problem with the 'update' buttons. My biggest
problem, thus far, is recording to the pc. I have noted changes in key press
'beep' that I never intended.

Thanks for the replies, folks.

The problem isn't one of "no buttons", more of "nothing happening".
The RX & audio stages work ie there is the typical FM noise with the
squelch backed off all the way, but there is no control, no display,
even the backlight didn't work (does now but stays on).
The noise produced by the CPU can also be heard.
I need a schematic to perform more detailed tests on the circuitry.
Readings are useless unless you know what they should be!
Maybe I should have explained the symptoms more fully. Maybe these ARE
the symptoms of a duff keypad. I just don't know. My AR3000 works just
fine!
A friend asked me to take a look at it for him. I don't want to let
him down if I can help it.

Thanks again for taking the time to reply.

Zarpy.

After being twice removed by ebay and then having been suspended for
it,I bring you for sale.....
Realistic Pro 2022 200 channel communications receiver with cell
mod.....
Beautiful physical condition,tight knobs,clean buttons,straight antenna
and nice aqua backit display!!! Nice features such as dual speed,
priority channel and memory!!
Radio does work and as with all my auctions
is sold "AS IS",however I will e-mail my ebay feedback if interested
with a rating of over 50,all positive!! I will accept paypal or money
order
and free shipping will be USPS priority in US only,lower 48,or you pick
up difference!!
Last time ebay removed this radio was 2 days before auction ended and it
was over $111.00
without free shipping!! If you dont like it for any reason,pop it on
ebay,quietly,and make a nice profit!! No owners manual,only instructions
from a similar working model included!!
Any questions:scarebear69@webtv.net
I have no camera,dont bother requesting pics!!

It's almost certainly an activated E.L.T. (emergency locator transmitter)
from a boat or an aircraft. I would expect some kind of tone or coded
signal, however

Like new in orig. box with manual and rubber duck antenna.
200 channel, has service search feature
$85. incl. shipping in US and tracking via USPS.
Thanks, Dave J.

Is there a way (short of removing the internal battery) to clear all banks, programmed frequencies, searches, etc. so I can start over in a new geographical location with a clean slate?

I know it can be done on my Pro-2006, but haven't found a way on this one yet.

Thanks

Sandlapper

You should report this to the authorities as it may be a real distress
signal. Any transmission on the frequency should be taken very seriously.

If it'll tune 902-928MHz NFM you'll hear them. The manufacturers apparently have no set channel, modulation, steps, etc., criteria to follow (at least in the US) so sometimes the base unit (which is what you want to hear) is in the lower band 902-904, or the upper band 926-928. If you hear a one sided conversation in one band, do a search in the other band at the same time for the base. Don't depend on any set step, so I always do it @ 5KHz to cover all bases. It's not unusual for the handset to be stronger than the base, because people stick the base where ever it will fit, and may not even extend or put up the antenna, if it works ok for their situation. If the signal is strong, but being chopped up, it's probably exceeding the bandpass of the scanner, and sometimes I've went to wfm mode to clear it up; however, the default step of the scanner may shift you too far from center freq, or the variation may not be enough to allow any benefit from wfm. If the signal sounds like some odd SSB signal, it's probably inverted, and I've had good luck clearing that up to where it's intelligible on LSB (I also run it through a audio filter that can notch out the hetrodyne tones that result). I've just gotten a Yupi 9000 with built in speech inverter, but haven't had the chance to try it yet on that, but my Yupi 7100 has been doing a great job on LSB!!
At 900MHz the antenna is as important as anything, and I've found the average "hear anything" stick on antenna worthless. If it will collapse to 3", do it. If you have an outdoor antenna, designed for upper UHF, use it. I have a discone mounted on the roof, which on the average does a fair dinkum job, but on occassion I have better results (from signals within ~50m) from a home built 900MHz ground plane with 3" elements, that's mounted on a 3' mast sitting on a book shelf, with a 6' coax connection to the scanner, or even a ~3" stub attached to the handheld.
At these frequencies, the best thing to do is experiment, experiment, experiment. (:->))

Source record: 62161

Be wary of that VR500 recommendation, the review at 'strong signals' web site sez it's got lousy 800mhz 'filtering', too much interference at that range, otherwise the review was generally favorable. I'd go with the 'established' R-10 anyway.

2545. Is software for PRO-2067 downloadable on line?

I want to order the ICOM R-10 and am searching for the best price.
Grove Ent. has it for $290, is anyone selling for any cheaper?
Any information appreciated.

2547. Space Frequencies

Newsgroup: rec.radio.scanner
Date: 2001-07-30 10:54:04 UTC
From: Scott Daniells <cabal@cncworld.org.uk>
Message-ID: <tmaf8o3h3t8sad@xo.supernews.co.uk>
Source record: 62164
Cross-posted to: rec.radio.scanner,aus.radio.scanner

I recently read a message in one of the newsgroups about a new (UHF???) antenna being installed on the International Space Station. So, I decided to search the internet for current and old Space - Earth frequencies that could be in use. I have listed all that I can find below. Any updates will be appreciated - please e-mail them to me and I will repost the list.

I have added all of the possible ones into my scanner and will be scanning most of them when the Space Shuttle and Space Station are overhead. Hopefully we can find some new frequencies for the ISS / Shuttle (if there are any), and confirm the ones that are listed as ISS frequencies that nobody has heard.

The most interesting thing I found was a couple of new frequencies that are apparently in use by the Space Shuttle
410.2 - NFM - New UHF Space Shuttle EVA Channel
414.2 - NFM - New UHF Space-Space Communication Channel
They could be useful in your scanner during the next Space Shuttle Mission

I also heard what sounded like Data transfer and Encrypted voice on the old NASA Frq (30.01). I don't know what this is - any ideas?. I also heard a phone call on the old Soviet Channel (39.98) here in the UK. Can anybody tell me if this has been reassigned, since it is in the middle of a Military band?

==========
The frequencies I have found are listed below.

(Frequencies I have heard are marked with a *. If people e-mail me with details of anything else they hear on these or other frequencies I will mark them with a *)

HF FREQUENCIES (All Voice is in AM Mode - Other = Unknown mode)
8.364 - Morse Code heard during recovery of Russian Space Vehicles
9.019 - AM - Used for Vostok 1
10.003 - Common Recovery Beacon frequency
15.008 - AM - Early Salyut / Soyuz
15.016 - AM - Mercury 7 Frequency
15.763 - AM - Used for Vostok 2
17.365 - AM - Used for the Voskhod missions
18.035 - AM - Used for Voskhod / early Soyuz missions
18.060 - AM - Old Soyuz frequency / Used During recovery of Russian Space Vehicles
19.944 - AM - Salyut 3
19.974 - Vostok Telemetry
19.993 - Luna Telemetry

19.995 - Vostok 3 / 4 Beacon & Telemetry
20.006 - AM - Vostok 1 - 6
20.008 - AM - Old Soyuz frequency / Salyut
22.205 - AM - Old Soyuz frequency
30.008 - Used during various Soviet manned missions

It is unlikely that there will be much communication on HF frequencies. It is possible, however, that 8.364 and 18.06 will be used during the recovery of Russian Space Vehicles.

VHF / UHF FREQUENCIES (Mode mentioned if known - UPDATES PLEASE)
* 30.01 - NFM - Old Nasa Space-Earth Frequency
39.98 - Soviet Manned Mission Frequency
40.002 - Sputnik 1 / 2
40.010 - Sputnik 3
60.015 - Explorer 7
66.0 - Sputnik 67
66.2 - Sputnik 7
71.2 - Luna 1
83.0 - Old Soviet Space - Earth TV Downlink Frequency
89.1 - Soviet Manned Mission Frequency
90.023 - Soviet Manned Mission Frequency
90.158 - Soviet Manned Mission Frequency
90.225 - Soviet Manned Mission Frequency
90.378 - Soviet Manned Mission Frequency
121.625 - NFM - Old Soyuz Backup Frequency
121.7 - NFM - Soviet Manned Mission Frequency
* 121.75 - NFM - Soyuz Primary Downlink
126.3 - AM - Listed as the Shuttle on 1 list (unlikely)
126.65 - AM - Listed as the Shuttle prior to launch
* 130.165 - NFM - International Space Station VHF 2 (Also MIR)
130.625 - NFM - Was used on MIR
132.425 - NFM - Was used for various NASA satellites
139.208 - NFM - Old Shuttle/Mir Air/Air frequency used during docking
139.3 - NFM - Old Shuttle - Mir Frequency
141.3 - NFM - Tone Generator on MIR
142.175 - NFM - Soviet Manned Mission Frequency
142.4 - NFM - Mir / Soyuz Backup Frequency
142.417 - NFM - Mir / Soyuz Backup Frequency / ASTP
142.6 - NFM - Was used on MIR
143.144 - NFM - Soviet Manned Mission Frequency
143.6 - NFM - Old Shuttle - Mir Frequency
143.618 - NFM - Soviet Manned Mission Frequency / MIR Spacewalks
* 143.625 - NFM - International Space Station VHF 1 (Also MIR)
143.825 - NFM - Soviet Manned Mission Frequency / Was used on MIR
145.55 - NFM - Amateur Downlink from Mir / Space Shuttle SAREX
* 145.8 - NFM - Amateur / Packet Downlink from International Space Station (also MIR)
145.812 - Sputnik 41
145.84 - NFM - Amateur Downlink from Space Shuttle
145.985 - NFM - Was used as a MIR Amateur Downlink for a short period of

time
149.91 - NFM - Old Soviet Navigation Satellites
149.97 - NFM - Polar Bear Satellites
* 149.98 - NFM - Cosmos Series Satellites
* 150.0 - NFM - Old Soviet Satellite Navigation Satellte frq - STILL
IN USE
* 150.3 - Cosmos 2349
151.4 - FM - MIR Beacon
165.0 - AM - Soyuz / Progress Telemetry
* 166.0 - AM - Soyuz / Progress Telemetry
166.14 - NFM - MIR Robot / Beacon
183.5 - NFM - Old Soviet Frequency (was also used for the "Luna"
missions)
183.512 - Luna 6
183.538 - NFM - Soviet Manned Mission Frequency
183.54 - NFM - Old Soviet Frequency (was also used for the "Luna"
missions)
183.6 - Luna / Mars / Venus Probes
192.0 - Old Soyuz Telemetry Channel
227.5 - AM - Apollo 6
230.4 - Skylab Primary
230.9 - AM - Apollo 5
231.0 - Reported as the International Space Station Spacewalk Channel
(Split Frequency??)
237.0 - Skylab Secondary
237.8 - AM - Apollo 5 / 6
240.0 - SRB Recovery Beacon
241.5 - AM - Apollo 5
242.0 - SRB Recovery Beacon
243.0 - AM - Military Distress Frequency (the Space shuttle has the
capability to talk here)
247.0 - Reported as another International Space Station Spacewalk Channel
(Split Frequency??)
247.3 - AM - Apollo 5
249.1 - AM/FM - USAF Communication channel
257.3 - AM - Apollo 5
* 259.7 - AM - Space Shuttle Primary / Apollo 7 - 12
260.6 - Has been a downlink frequency for various satellites
260.75 - NFM - Satcom
260.775 - NFM - Satcom
261.625 - NFM - Satcom
261.75 - NFM - Launch Support Satellite Net
261.8 - NFM - Launch Support Satellite Net
261.95 - NFM - Launch Support Satellite Net
263.625 - NFM - Launch Support Satellite Net
264.8 - AM - Space Shuttle Range Support
270.0 - AM - Space Shuttle Backup (not listed on a lot of online lists,
but I found it in a lot of books)
279.0 - AM - Space Shuttle Backup
284.1 - AM - Space Shuttle Range Support

291.8 - AM - Space Shuttle Range Support
294.6 - AM - Space Shuttle Range Support
* 296.8 - AM - Space Shuttle Backup / Apollo 7 - 12
366.415 - FM - Unidentified user
366.4415 - USB - USAF
380.963 - Viking 1 / 2
399.76 - Cosmos Series
399.945 - AM - Primary USN Communication Channel
400.1 - Orbcom Beacon
401.5 - Earlybird Satellite
406.8 - Cosmos 2349
408.15 - NFM - Emergency Landing Site Net
408.8 - NFM - Emergency Landing Site Net
410.2 - NFM - New UHF Space Shuttle EVA Channel
414.2 - NFM - New UHF Space-Space Communication Channel
416.5 - Space Shuttle (Telemetry????)
420.0 - TV Uplink Frequency / Also listed as an ISS Onboard frequency
433.75 - MIR Amateur Uplink
437.1 - Mars Global Surveyor
437.925 - MIR
437.95 - MIR Amateur Downlink
437.975 - MIR
463.0 - Soyuz TV Downlink / Also listed as an ISS Onboard frequency
500.0 - AM - NATO Distress Frequency (unknown if space vehicles can talk on this frq)
628.0 - AM - ISS Zvezda Module Telemetry
630.0 - AM - ISS Zvezda Module Telemetry
632.0 - AM - ISS Zarya Module Telemetry
634.0 - AM - ISS Zarya Module Telemetry
768.96 - Russian Command Uplink
919.76 - Soyuz (Unknown use) / ASTP
922.0 - Progress Telemetry
922.1 - Soyuz Telemetry
922.75 - Soyuz Telemetry / Old TV Downlink frequency
922.754 - Soyuz / Salyut / Progress Telemetry
922.76 - Venera / Mars / Zond / Luna Probe Telemetry
922.763 - Soyuz / Progress Telemetry (Also VERY uncommon voice backup channel)
925.24 - Soyuz (Unknown use)
925.3 - Salyut (Unknown use)
926.05 - Soyuz (Unknown use)
926.06 - Soyuz / Mir / Salyut (Telemetry / Command / Uncommon voice)
926.09 - Progress Telemetry
926.1 - Soyuz Telemetry
928.4 - Was used for the Venera missions and other Soviet Deep Space Probes
928.429 - Venera 7 Telemetry
959.52 - Ranger 6 - 9
960.05 - Ranger / Pioneer / Mariner
960.1 - Ranger 1 - 4

960.58 - Ranger 6 - 9 TV Downlink
972.0 - Explorer 29 - 36
1250.0 - STS 59 Radar
1381.1 - Galileo Probe
1667.0 - Vega 1 / 2
1831.787 - US Dept of Defense Uplink to Space Shuttle
2085.6875 - S Band Uplink to Space Shuttle
2106.4 - Command Uplink
2119.8 - Space Shuttle - Paylord Link Frequency
2217.5 - TDRS Satellite link
2250.0 - WFM - Analog Data and Telemetry during Space Shuttle Launch
2265.0 - S Band Downlink
2287.5 - ISS Zarya Module / Space Shuttle
2298.8 - Payload - Space Shuttle Link Frequency

==========

* = Frequencies that I have heard, or have been heard recently by people I have talked to. On 296.8 I heard an open Channel during one of the ISS missions (but no voice)

BANDS:
The 136-138 band has a lot of Non Geostationary frequencies.

The 149-151 Band has a lot of old Russian Navigation Satellited in (10KHz Spacing). I have heard a few and they are beeps / Data transfer.

The 922-928 band is mainly used for Telemetry / Command by the International Space station and Russian Space Vehicles, although the onboard systems have the capability of transmitting voice on this channel. Voice transmissions, however, are rarely heard.

The 1535 - 1545 Band (NFM) is used by Inmarsat. This is the satellite used by NASA to communicate with the Trans-Atlantic Landing (TAL) Sites in Europe and Africa in the days before the Space Shuttle Launch. I have never heard them, but the schedule should be meetings everyday at 13.00GMT in the last 3 days before the launch, and then the 45 minutes before launch. I am not sure if a normal scanner can receive it since the signal is possibly very weak.

I didn't list much above 1GHz because there wasn't much there that could be received with a normal scanner (many of the things above 1GHz from space are digital anyway).

==========

If you hear anything on the frequencies listed please e-mail me with details, such as frequency, time, location, language, what was said etc. Also, if you have any updates for the list, including modes or frequencies, please e-mail them to me as well and I will add them to the list.

Happy Scanning

Hi Scott

Have you seen

http://www.grove-ent.com/nasa.html

It is the best list that I seen.
However note the copyright warning

That's an emergency locator beacon. They occasionally go off accidentally on aircraft, I've heard them at airports. Another poster mentioned that it should be reported, and I'll second that. The beacon could have been set off by an actual accident, and your hearing it may help locate the beacon. AFAIK, these units are not routinely tested on the air.

Barry

Yep - I found a few of the frequencies on there, such as the *NEW* Shuttle frequencies. Most of the frequencies can be found on other lists.

-Scott

The same toilets that you have to flush 2x anyways after taking a good post-holiday (or other large meal) shit. Kinda defeats the purpose eh??? :)

Ryan

From: Rick Prelinger <footage@panix.com>
Message-ID: <9k3p6nsnl1@news.panix.com>
Source record: 62169

Would anyone who has an R7000 service manual be kind enough to let me know the wideband FM discriminator tap point? I have documentation on the narrow FM point, but would like the wideband one.

With many thanks,
Rick Prelinger
footage@panix.com

2554. Antenna Question

Newsgroup: rec.radio.scanner
Date: 2001-07-30 15:41:11 UTC
From: Paul Blevins <paul.blevins@networktelephone.net>
Message-ID: <tmb00p25iemj27@corp.supernews.com>
Source record: 62171

I have a discone atenna mounted on a 10 foot mast. Right now the mast is leaning against the house. How much difference will I hear if I put the mast and antenna on the eve of my house? It would be about 30 or 40 feet in the air then. Just wondering if it is worth the trouble.

Thanks,

PB

Hi!,

What's the re-sale vaule of R.S. Realistic PRO-51 Scanner?.

As this scanner has aircraft band, marine band, and weather band.

My friend offered me $150.00 for the one I have, Should
I go for this offer?. Or should I sell it for less?.

If anyone has a suggestion for me please let me know.

Thank-You

The difference should be HUGE. Depending on how hard it is for you to put
it up there, I'd say it's definitely worth it.

2567. Antenna Question

Newsgroup: rec.radio.scanner
Date: 2001-07-30 19:27:47 UTC
From: Paul Blevins <paul.blevins@networktelephone.net>
Message-ID: <tmbd9diks1ai97@corp.supernews.com>
Source record: 62184
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have a discone atenna mounted on a 10 foot mast. Right now the mast is leaning against the house. How much difference will I hear if I put the mast and antenna on the eve of my house? It would be about 30 or 40 feet in the air then. Just wondering if it is worth the trouble.

Thanks,

PB

Well, if it's leaning, that tells me that it may "go", and you never know where. Forty feet would make a HUGE difference - just use good, low-loss coax and weatherproof the connection atop.

Good luck!

I would recommend the VR500 if you want something small. I have been happy
with mine and haven't had 800mhz problems.
The VR500 is better at HF than most of the others I've had. The R2 has
better audio.
The VR500's stock antenna is deaf. A telescopic antenna works wonders.

>

Depends on where you live and what you want to hear. Usually higher is
better because these signals depend on the line of sight to travel. If
you are hearing all you want to hear now, why bother? If there are
stations that you hear that are marginal in reception, go for it, most
likely it will help. 30 feet WILL make a difference, the amount
depends on you surroundings.

Make sure you are using GOOD quality coax. RG-6 is good and my
favorite is LMR-400. Don't use rg-59 or 58 or even rg-8, all big time
losers at UHF/VHF.

Glenn

Hello,

I monitor trunked systems in Salt Lake and Utah Counties. I often hear the police dispatcher reporting "Negative N.C.I.C." when giving information on an individual (probably results of a drivers' license search). I just heard the dispatcher say, "The N.C.I.C. is down, I'll have to get back to you..."

What is NCIC? I'm guessing it is some type of database access that allows for easy search of vehicle registration, drivers license data, and/or suspect or arrest warrant status.

I also welcome any other scanner enthusiasts from these counties to share information/freqs.

Later...

-BHall

Police Officer's typically "run" subjects NCIC. This is a national database of wanted subjects. Example, if you murder someone in CA and are stopped in FL, the officer will be advised by the dispatcher that their is an active warrant out for you.

This is only for serious crimes because police department or state Attorney Generals don't normally extradite for minor crimes (disorderly conduct, etc..). Thgese types of crimes are put into a state warrant file. Dispatcher's run subjects both NCIC and "local" (in-state).

Living in a little dream world . NSA isnt just monitoring the same stuff we
do . they are monitoring your phone calls , your e-mail , your internet
activiteies , and many more things that it is supposed to be illegal for you
and me to do !

> Why? Because e-mails are somehow more sacred than cell-phones??
> Seems rather hypocritical.
>
> I do agree that private comms. are, or should be considered, more
> inviolate than the activities of "public servants", but it is kinda hard
for me
> to think of a way to protect *all* the citizens and catch *all* the bad
guys.

Well, private comms AREN`T inviolate, since NSA monitors them regularly. NSA
monitors cell phones extensively, and it is not confined to a single
country, either.

> The real issue with NSA is not it's technical abilities, but rather with
the
> political oversight of NSA. Questions that should or could be rightfully
asked
> of NSA could include:

The REAL issue with the NSA is their ability to break the same laws that
keep you and i from monitoring cell phones , cordless phones, etc, while
they break that law with complete impugnity, while they tell you not to turn
your piddling little scanner on and monitor a 20-mile circle, they monitor
most of the world....

>
> 1. Have they used these abilities on private citizens without real
probable
> cause? (Violates I and IV amendments)

They already do this on a daily basis, and make no denials of it whatsoever.
>
> 2. Have they used their abilities for personal or political gain of those
in
> power? (Corruption)

do you know of a government intelligence agency that HASNT been used and
abused for this purpose ?

>
> 3. Have they used these abilities to grant unfair advantage to favored
> contractors at the expense of other legitimate businessman?
> (Corruption and denial of Free Trade, Fair Business, etc.)

How about using them for industrial espionage, and to make certain members
aware of changes in the economic structure of companies, so that they can
then use that info to make billions in the stock market ? This is but one of
50 abuses i can think of.... How about blackmail of certain political
figures in order to ensure the continued funding of their little "spy on
everyone and everthing" operation (which aint so little, fella).
>
> These are all legitimate questions that could be asked of any Intel.
agency.
> But what is to be gained by flooding their software filters with an
overload
> of "trigger words" ? Assuming such filters exist on the level needed to
make
> such a protest effective.

It wont be effective, and it is useless. Any smart programmer at the NSA can
take care fo this kind of simple-minded "flooding" type of activity, in less
than an afternoon. I t will be even more ineffective, since they have seen
fit to announce the day they are going to do it on. Remember, these are the
same people that built their own mainframe computer ! I dont think they will
be at all affected by this stupidity.

>
> How really different is what ECHELON is said to be capable of from
> what scannists do every day?

It is different because they are monitoring most of the world with this. Can
YOU monitor the entire world , and process and scan thousands upon thousands
of emails , cell calls, and internet activity for keywords ? with your
little ground - based scanner ?. Do you realize that no encryption scheme
may be put on a cell phone network , without giving the government the key
to it first, and that this is the law now ? This is also true of encyption
schemes for cordless phones, as well, and most other encryption methods in
use in most services. Now, we cant decode and monitor them any more , but I
can assure you that NSA can !

Just because it's "e-mail" over a cable hookup
> instead of "radio" over the airwaves doesn't give it any sacred status. I
will

There are, I think, 7 different NCIC "Files" that exist:

Wanted Person
Missing Person
License Plate
Vehicles
Articles
Gun
Boat

When a person, or article is "Ran NCIC", a positive or negative response is returned to a dedicated printer. The dispatcher can tell if the item that has been queried is wanted, missing, etc... No all NCIC entries are criminals. Some are missing persons, stolen cars, stolen tags, etc.

Actually now there are two more. Violent Gang Members and Protection From Abuse (restraining orders). These two types of entries are made on persons that are either in gangs or have had PFA's served against them. They are for information only and are not used to effect an arrest like a wanted person entry would be.

Tom

2582. PC Control for the BC895XLT??

From: trp566@aol.com
Message-ID: <20010730214410.28553.00002067@ng-cj1.aol.com>
Source record: 62101

Actually, NCIC has more files than you think.

Wanted Person
Missing Person
Stolen Vehicle
Stolen License Plate
Stolen Boat
Stolen Security
Stolen Article
Unidentified Person
US Secret Service Protective Person File
Originating Agency Identifier File
Interstate Identification Index (III)
Violent Gang and Terrorist Organizational File
Deported Felon File
Stolen/Recovered Gun
Protection Order File

Think of it as an automated file cabinet of criminal justice related information that puts law enforcement agencies in contact with one another regarding wanted/missing persons and other items of stolen property.

I teach NCIC for a living, that's how I know.

Best regards,

Tom TRP566@aol.com

2585. Re: Antenna Question

It will make a huge difference!

What you are hearing now with your antenna leaning against the house is only the strongest and closest stuff. If you want to really hear what is going on all around town (and then some), get that antenna up as high as practical, and as in the clear as you can. Putting up a ten-foot mast with a discone is a fairly easy task (usually), since it doesn't present a whole lot of windload and therefore does not need extraordinary support.

The difference will be like night and day, as if someone suddenly flipped on the switch!

Good luck.

Source record: 62103

Another us of Ctcss or digital Tone Squelch is to determine who's on the
frequency.
if call signs aren't used. You will need a good Frequency Directory,for
tone info, most now give the tone code where many radios can input this
vital information.
Why not buy a radio that will do both Ctcss and digital tone codes like
the Radio Shack
PRO-92/PRO-2067, Relm HS 200/MS 200 or Uniden Sport Cat SC-200 and
Uniden BC-780 XLT
The PRO-92, PRO-2067 and BC 780 XLT search for and display tone codes.
The Relm radios will
only allow input, you have to know the proper code. The ICOM IC R-2 will
also search
for Ctcss and allow input and with the IC R-2 a Ctcss can be set during
a frequency search
so the radio will only stop on frequencies using the preset Ctcss, but
the Icom IC R-2 dose not do Digital tone codes.

If there is any rogue canceling going on, I think it is high time that we ferreted out the party(ies) responsible. They are likely the same ones harassing users with FA messages by means of spurious complaints to E-Bay and ISP's. Rogue cancels would certainly be sufficient to basis on which to approach the offending party's ISP with a view toward getting their access dropped. it is long past time we found out who is doing this kind of stuff and dealt with them decisively.

Like to trade my exc. condition R.S. Pro 2045 for a similar condition B.C. 895XLT. 2045 has military air frequencies. (Read review at Strong Signals) 895XLT does not have mil., but has trunktracking, so I thought a trade might work. So I throw the offer out there.

Newsgroup: rec.radio.scanner
Date: 2001-07-31 04:11:01 UTC
From: F Barry Mulligan <70035.140@CompuServe.COM>
Message-ID: <9k5b4l$s1a$1@suaar1aa.prod.compuserve.com>
Source record: 62107

"Sandlapper" <bbutler@home.com> asked:
> ... but all I see on the back of the scanner is 4-pin remote plug...no
> RS-232 port...nothing. Do I need a hardware interface of some sort?

The interface is a 5-pin PCB header (.025" square pins on 0.1" centers).
The mating socket is standard (RadioShack.com's Cat# 910-1471 is 25 cents,
plus 24 cents for 3 contacts), but a segment cut out of a DIP socket will
work just as well. The pinout is symmetric, with pins 1&5 (the outer ones)
carrying data in (to the radio), 2&4 are data out (from the radio), and
pin 3 is ground.

The cable connections are:

BC895 DB9 DB25
1 <= to radio 3 2
2 from radio => 2 3
3 <= ground => 5 7
(TR-CD-DSR) 4-1-6 20-8-6 *
(RTS-CTS) 7-8 4-5 *

* If you will be using a standard communication program, add the two sets
of jumpers in the RS-232 connector to simulate the normal control signals.

The comm protcol is half-duplex, 9600 baud, 8/N/1. Commands to the radio
should be terminated with a C/R only.

2592. for sale posts

Newsgroup: rec.radio.scanner
Date: 2001-07-31 05:48:24 UTC
From: SPAMBLOCK_timmy23213213@aol.com
Message-ID: <9k5gr8$2jgrg$44@ID-21921.news.dfncis.de>
Source record: 62108

My questions are the following.

1) Why do people think they can do whatever they want by continually violating the newsgroup's rules, then cussing about it when something gets done about it?

2) Why don't people just post the for sale messages to the *.swap newsgroup, instead of the discussion group? If the "it's too crowded" response well then tough, this is a discussion group. The rules here will be enforced. This is the perfect opportunity for some bright-minded person to come up with a new newsgroup, named "rec.radio.scanner.forsale" or "alt.radio.forsale.general" or whatever, just make a new group. Definately, the demand is there, no doubt! Think about it, it would pretty much put an end of all this nonsense for good, and forfill the demand. Then the "there's no where else to post" response comes up. Again, tough. That's just like a spammer saying "well there was no where else to spam, so I spammed you. so ridiculous.

3) Do people get the idea of "discussion" vs "for sale"? People think it's ok because it's "on topic", but have no idea of the type of post also matters. I guess these people would butt in on an active conference room and dribble out some sales message. Talk about poor marketing!

4) Filters. if the "why don't you just use filters?" response then my best of luck of all the people who don't have them... filters are just not standard practice, and the use of filter implys that there's something wrong to begin with, to cover up the mistake: the spam. Look, if we all have to use filters, then those for sale spammers are just control freaks, and they just think they can do whatever they want. Look, it's plain and simple: JUST DON'T DO IT!!! These for sale spammers are just more spammers on the internet ruining it for us all.

Me myself is an observer only, I do not do any reporting and canceling of the for sale posts, even through I do hate those posts myself. I just don't want to get involved. I sure would like to see my favorite newsgroups cleaned up though. So to whoever's doing it, I give you this message "KEEP UP THE GOOD WORK!!!!!!!". You're cirtainly raising a stink with those awful for sale spammers.

The original charter for rec.radio.scanner (from 1993) is here:
ftp://ftp.uu.net/usenet/control/rec/rec.radio.scanner.Z

There's absolutely nothing in the charter prohibiting For Sale posts.
ISPs who complain should be directed to the above link. For those
without a decompression utility here's the text of the charter:

From tale@uunet.uu.net Tue Aug 31 11:18:04 1993
Control: newgroup rec.radio.scanner
Newsgroups: rec.radio.scanner
Path: uunet!tale
From: tale@uunet.uu.net (David C Lawrence)
Subject: newgroup rec.radio.scanner
Approved: tale@uunet.uu.net
Sender: tale@uunet.uu.net (David C Lawrence)
Organization: UUNET Technologies, Inc
Date: Tue, 31 Aug 1993 14:30:18 GMT
Message-ID: <CCMoAI.266@uunet.uu.net>
Lines: 16
Xref: uunet control:707675

rec.radio.scanner is an unmoderated newsgroup which passed its vote for
creation by 298:24 as reported in news.announce.newgroups on 25 Aug 1993.

For your newsgroups file:
rec.radio.scanner "Utility" broadcasting traffic above 30 MHz.

The charter, culled from the call for votes:

rec.radio.scanner is a newsgroup for discussion about "utility"
traffic above 30 MHz. FM & TV-broadcasting, shortwave, amateur radio
and broadcast satellite-related material doesn't belong to

rec.radio.scanner because they have their own newsgroups. This newsgroup replaces alt.radio.scanner. In addition, the rec.radio.scanner will be gatewayed to a mailing list which will be created as soon as possible after newsgroup creation, as there are many who do not have access to USENET news.

2594. Pozilla Software Support, Any Ideas?

Source record: 62112
Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner,alt.radio.scanner

Hi all,

I am looking for experiences with the Dressler ARA 2000 active antenna,
especially in combination with a Yupiteru MVT7100.

I know that the Yupiteru (as any handheld scanner) is not really designed for
a external antenna. And I also know the problems it can cause by connecting
a external antenna: Intermodulation and the antenna input can be overloaded.

However, the ARA 2000 has a variable attenuator (0 to -20 dB) according
to their webpage. Also the Yupiteru has a attenuator that can be switched
on or off. Would it therefore be possible to connect the ARA 2000 to the
Yupiteru without having problems like the intermodulation?
In theory this antenna should pick up faint signals better than a discone
since it has a amplifier with a gain of 10-12.5 dB whereas the noise
figure isn't that bad: 3.5 - 5.5 dB.
When using the attenuator it may still be possible to use it with my
Yupiteru?

I ask since I would like to have a compact wide range antenna to mount on
my roof. I like the size of the ARA 2000. Since it has a attenuator I was
wondering if I can use it with my Yupiteru after all.

Or dou you think it's a better choice to have a discone after all, taking the
intermodulation and overloading into account?
Are there any test of the ARA 2000 available for download?
Last question: Does someone know how the attenuator of the ARA works?
Does it just lower the power voltage (as is often done for 'cheap' active
antennas) or does it really turn down the gain on the amplifier inside the ARA?

All tips/hints are welcome!

Many thanks in advance,
/Marc

2597. NiCads for BC2500

Newsgroup: rec.radio.scanner
Date: 2001-07-31 13:35:32 UTC

Hello!

I have a Uniden BC2500 handheld, and would like to rebuild the NiCad battery pack, as I'm tired of paying $60.00-$70.00 every 2 years for a new one. I have seen mail-order shops that will "refurbish" your battery packs for around $30.00, but I'm thinking I can get away cheaper by just doing it myself. What I need to know is the type of batteries I need to purchase, as the ones in the sealed case are not labeled. Mine is a pack of 3 batteries (2 approx AA size batteries and 1 short one, about half the length of the other 2). I would prefer to buy the required NiCads from a local retailer (Radio Shack, etc) rather than mail order. Any ideas as to what I need, and what I can expect to pay? Thanks!!!

Neither do trunking. In fact, I am not aware of any wide-band
receivers which do trunking.

The weakness of the Alinco radios I see is the slow scan speed, about
3 channels per second, compared to scan speeds about 10x faster in
most other radios of this type.

Three rules of thumb about antennas:

1) Get it up as high as possible.

2) Get it away from as many other structures (especially buildings
with RF activity of any sort inside)

3) Use low loss coax and Seal all connectors with electrician's putty

(And if it stayed up last winter, it wasn't high enough :-)

Hi
I have a similar spec handheld which i tried with a vhf/uhf preamp. Firstly the preamp, whether it has variable gain or not, will amplify everything across its entire range. So if your trying to listen to ,for example ,a weak signal on the
2m band and turn up the gain, the amplifier will also be cranking up the signal strength on the FM broadcast band and the Pager band and probably the TV band as well. All these increased signal strengths are presented to the antenna socket on the radio but the radio still has to filter out what your trying to listen to from the rest of the amplified mush. Predicted result with a Yupi ? breakthru, intermodulation and noise will all be much worse even with the attenuator on.
Also , even tho the amp quotes a "low noise" figure, 3 - 5 dB of noise is a *lot* to a sensitive handheld... you'd expect to see the S meter lit up on VHF the way it does on SW when you attach your long wire... a constant 3 points on the meter at UHF (!) in my case.
Preamps are ok if your using a (deaf) base station rig in a remote-ish location with no nearby strong stations.
Even with an external antenna you'll most likely get some probs with a handheld but it will still be usable.

HTH

The BP2500 battery pack will snap open (it's not glued).
There are a few companies that rebuild the packs. I highly
recommend www.nicdlady.com which I have used. (Another
is www.primecell.com which is good also.)

They both also offer drop-in cell pack replacements. These will
usually save you about 5 dollars over the rebuild. You open
the BP2500 case, unsolder the leads from the old cell pack, solder
them to the new cell pack and snap it back together.

I would HIGHLY recommend that you consider replacing the cells
with the newer NiMH type. They will run the scanner for MANY hours
longer and do not suffer from the "memory effect" of NiCAD batteries.
On the BC2500XLT you can still use the original charger. It will take
about 24 hours to charge (as opposed to 16 with the NiCADs), but it's
well worth it.

Thing that always got me is that access to NCIC Data is highly restricted and requires a training course and User ID to use the System (to track usage), the dissemination of NCIC Data is also covered under User Agreements as to who and what may be released; now Scanning Police Frequencies is legal but you run into a weird quagmire when it comes to NCIC Data being received by "unauthorized" persons.

Just something I have always pondered.

2606. Possible solution to FA posts

Newsgroup: rec.radio.scanner
Date: 2001-07-31 17:00:36 UTC
From: bhall7@email.com
Message-ID: <dc0c38eb.0107310900.26ccb57d@posting.google.com>
Source record: 62120

Since some frenzied fiends out there seem to be so bent on screwing up everyone's relevant auction/FA: posts about useful scanning equipment on eBay, and since eBay sends ridiculous threats that you are sending "SPAM" and threatens to cancel your account if you post an auction announcement, there may be another alternative.

I saw a FA announcement in another newsgroup and the body of the message simply had the link:

http://pages.ebay.com/search/items/search_seller.html

The seller then gave his e-mail address/eBay username which can be entered in the search seller page and the item for auction can easily be found. (unless you're a power seller or something). It might be kind of annoying, but it works--at least until some fag starts cancelling the posts.

Who is dictating what we as scanner enthusiasts post on the newsgroups?

Just a thought. I don't know if people have tried that on this ng before.

Laters..

2608. Another Antenna Installation Question

Newsgroup: rec.radio.scanner
Date: 2001-07-31 17:20:37 UTC
From: "J. Scott Branscum" <nospam@usa.net>
Message-ID: <FNB97.1343$WB.151427@paloalto-snr1.gtei.net>
Source record: 62124
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Thanks to everyone on this NG who replied to my previous
questions. I went ahead at your recommendations and bought
LMR-400 instead of using RG-6. I'm in progress of my discone
antenna installation on the end of a 15 foot mast. My question
now is whether I route the LMR-400 up inside and through the mast, looped
out the top and down through the discone radials and connected at the
bottom, or is it better to run it straight up the outside of the
mast and connect it without any looping through the radials? I
was concerned the loop from the top of the mast down through
the radials and connected at the bottom that this loop might
affect reception.
Oh, and the PL-259 connectors, which the Discone uses, I am
told are only good to approx 400 Mhz. My BC780 is good up
through 1300 Mhz. Is there really a problem with using PL-259 vs
N connectors? Is it just minor db loss at higher frequencies?
I'll be listening to the whole 25-1300 Mhz range.
Thanks,
Scott (a2stepper38@hotmail.com)

N.C.I.C. is National Crime Information Center and is part of the F.B.I's network. It is a federal database basically, is to my understanding. In Michigan we have also a state version called L.E.I.N. which is Law Enforcement Information Network which basically serves a similar purpose.

On calls around here the dispatcher will respond usually (unless the person has something of interest in either) "No L.E.I.N., No N.C.I.C." when doing a file check.

I'll second the other comments re. the 7100 possibly finding the stronger
signals too much to handle.

But, the main reason for my post.... make sure you buy the ARA2000 from
somewhere with a good returns policy, just in case you're as unimpressed
as I was. I bought one and compared it with a discone and a Maplic
Superscan Mk II active aerial. It more or less tied with the discone
on most bands, and was easily beaten by the Maplin everywhere I tried.
When I queried the poor performance with my dealer they spoke to Dressler
on my behalf and were told that the ARA2000 "should be comparable with
a discone and people buy it for it's neat appearance". For that sort of
money I want something that works well. It went back for a full refund.

Cheers,

Mark.

p.s. Unfortunately the Maplin Superscan Mk II has been discontinued. :(
I still have one as my main rx aerial, and I'm treating it very carefully!

Scott, run the coax outside the mast and don't mess with looping it
around or running it though he mast unless you have to.

If the discone is a pl-259 there isn't much you can do except change
the connector on the antenna. Not worth it and an adapter to get to a
N will just add loss. Leave it alone, you will do fine.

Get this one up and start planning you next antenna installation. You
should try building the antenna on my web site. It works fairly well.

Let us know how the new location for the discone works out.

Message-ID: <l51emtk7hqhdt0bdl5hb10u465r5h4etjg@4ax.com>
Source record: 62132

According to an article in today's (7/31/01) Los Angeles Times,
LAPD's new digital Motorola system is getting poor reviews from
officers. The article cites a number of problems, mainly signal
quality, including air units not being able to use digital mode at
all.

2617. Pro-2006 Backlight Repair

Newsgroup: rec.radio.scanner
Date: 2001-07-31 19:34:54 UTC
From: Larry Levy <levysNOSpam@earthlink.net>
Message-ID: <2h1emtkfbhvjdoeq4ooeclpotg8l3r8vmj@4ax.com>
Source record: 62133

After almost ten years of heavy use, the back light on my Pro-2006 is finally growing dim.

I know the repair that Bob Parnass suggests and I know what part to order from Radio Shack.

However, it seems to me that a few months ago, someone suggested ordering an entire LCD display replacement for the radio, rather than the electroluminescent panel?

There are two separate parts numbers and descriptions for these and the price is not all that different. The parts list for the Pro-2006 lists good old, EL501 (LB0040) for the electroluminescent panel, but they also show LCD501 (LB0041) and describe it as "LCD, Display 40 pin." That sounds like the whole LCD with the 40 pin connector to me.

The cost difference is only about $7.00 or so. I think EL501 sells for $29.00, while the whole panel sells for $35.00. Not much difference, and if its makes repair easier: simply screwing the new panel in and attaching the connector, rather than the old way of unsoldering the panel, etc., then that might be the way to go?

Any thoughts?

Thanks,

-Larry

You know, they must have been having a major brain fade for not
including helicopters in the picture. Since Police helicopters
operate under 14CFR91 (just like the rest of General Aviation),
installing a radio should be no worse than a form 337 from a local
Flight Standards District Office. I doubt that a "helicopter radio"
was the issue.

I suspect that what really happened is that this digital system can't
handle a fast moving airborne vehicle. It wouldn't surprise me to
learn that they need to patch the helicopter radio traffic in from a
few fixed sites and didn't plan on it.

So: was it the LAPD's fault for not including their helicopter fleet
from the beginning --or was it Motorola's fault for not clearly
explaining the limitations of the system? Only their trial lawyers
know for sure :-)

IMHO (which I respect ;):
What is the big deal about a few FS or FA posts?????
It's just like an X rated movie, if you don't want to see it, DON'T GO IN THE DAMN THEATER!! What's so hard about that?? Don't want to read it, don't click the frigin mouse, and keep on goin.....
Personally, I like to check out an occasional FS on different things, without going to a totally different site.. Now if a power seller is trying to dominate the posts, that's a different story, but for the average smuck like me just trying to reach the active souls in the hobby, DO IT!!
Cheers n beers y'all!
Don
BTW - if anyone is looking for a NEW MVT-9000EU MkII .. goto e*

the Maplin super scan 11 is an excellant active aerial,but i also use a little tv active aerial with 2 telescopic rods and this is portable and fantastic,with either a base or handy although on some freqs use of att is required,but of course no good for hf,the Dressler i have never tried as the prices they charge are just unreal.

Picked it up in a trade. The guy never used it and it's brand new.
I don't need it. Everybody should know the specs on these by now,
if not, hit the webpage for Radio Shack and check them.

Price: $250 shipped prepay or COD. Cashiers Check or
Money Orders only.

I'm looking for a VX-5R if someone wants to trade.

Hi, Jake:

yep that seems to be the case. Right now, they seem to be keeping air units in the clear on a tac (484.4375). The article mentions something about Motorola not offering a digital aircraft radio and that the City has purchased some elsewhere. That still doesn't address the doppler problems I've heard can be associated with air units trying to use digital, as you say.

AFAIK, these units are not routinely tested on
> the air.
>
> Barry

They are routinely tested on the air. You are allowed to test them in
the first 5 minutes of the hour. So it isn't unusual to hear them
during that time.

I just hope I never crash in the first 5 minutes after the hour.

Once again BellSouth has been causing problems. A couple of
weeks ago my web page link quit working. I was told I would need
to drop the "lig" part of the URL. So I sent out messages and the
new URL worked for about a week. Last week the new URL quit
working and was informed the BellSouth was working on the
problem. I just found out that the old URL has started working
again so I called BellSouth for clarification. This tech told me that
I would need to put the "lig" back in my URL that it would not
be changing. So once again here is the message. My web page
is now working using the old URL:

http://personal.lig.bellsouth.net/~kd5eis

The real (translated) URL that never quit working is:

http://personal.lig.bellsouth.net/lig/k/d/kd5eis

I apologize for the confusion and I hope BellSouth has finally got
the web servers stable.

Or if you never want to see FS or FA posts, simply set up your newsreader to
filter out any messages with FS or FA in the headers. Let the rest of us
who want to read them do so.

} >without a decompression utility here's the text of the charter:
}
} It ALSO doesn't say it's not about space aliens,
} but I doubt anyone would argue it IS because that's not prohibited.

You obviously have no clue about Usenet groups. Scanners for sale
is a subject that's on-topic per the charter, space aliens are not.

} The charter put it in a hierarchy that includes rec.radio.swap,
} which IS for buying and selling radio equipment, so I think it's
} implied that THAT is where people would do their buying,
} selling, and auctioning.

Bullshit. Read the charter for rec.radio.swap and tell us where the words
buy, sell or auction appear.

} It REALLY doesn't bother me that much, but it obviously bothers some,
} and since you don't know WHO those few are, you're fighting a losing
} battle trying to defend against them.

Nonsense. As the charter is written no one has any basis for complaints
against FS/FA posts. Users who don't like them should either not read
them or relax their anal muscles a little. I'm the first one who would be
pushing for a retroactive charter which prohibits these posts IF
commercial businesses were regularly spamming this group, but they
aren't, and from the reponses to this thread far more of us prefer to see
these posts than not see them.

Use them all the time. Just be careful of the auto glass you
mount it on. Some auto glass that is tinted, has metallic
properties. Need to check on the glass you have. Best to use a
non tinted area. Use front, side or rear. Also don't mount over
the heater wires on the rear window. The wires will mess up the
antenna performance.

$150 is a great price, take it!
They are worth about $100 in excellent condition with charger and the real manual not online simplified manual. If they are before 8A4 date code they can be tricked into doing cell frequencies and are worth about $50 more.

I monitored this freq for the last 1/2 hour using a PRO-92, and heard
transmissions with

PL=192.8, and
PL=186.2

The first appears to be Monmouth County, NJ, but you may want to
verify that.
The second appears to be Manhatten.

Hi, Jim:

Actually, I don't think the frequency matters in terms of the prblem
with air units talking to ground units. Here in L.A., the PD uses UHF
and the LAFD uses 800 Mhz to do it.

I think it has something to do with decoding the digital signal, but I
have no idea how that works.

keyword: discussion. see this newsgroup is for discussion, not marketplace.

just because it doesn't say NOT to post it, it doesn't mean you can do it...
clearly, it's stated as a discussion. so let's keep it that way.

generally, if it's stated so and so, then that's what it was originally
intended for. and then if something becomes a problem, it is added to the
charter later on saying not to do it, but the charter is old, it hasn't been
updated for a long time. believe me, if someone was watching over this
group, then they would be updating that charter, and for sure it would have
been updated years ago stating "do not post for sale and for auction ads".

hmmm... 2 years? nicad packs should definately last longer than that. for reference, the most common causes of early failure are:

1) a severe "memory effect" has built up over time. This is caused by consistantly not draining the battery all the way before recharging.

2) overcharge. This is caused by leaving the battery on the charger way longer than needed.

3) or a combination of both.

solutions:

1) memory effect: allow radio to shut off on it's own or until the display goes out about once every 5 charge cycles to keep away any problems with the memory effect. If you do this, then you still get a memory, then your radio isn't draining the battery enough to stop memory effect from happening. Most radios will be fine at draining batteries though. You will have to find an alternate way of completely discharging your battery.

2) overcharge. don't leave the battery on the charger longer than needed. Check the manual to see how long it should take, then try not to leave it charging any longer than needed. no manual? to find out how long charging should take, calculate battery capacity in mah divided by charger output in mah. Add 20% to the total, and that number is how many hours it will take. This would be for a completely discharged battery.

Also remember that if you happen to have your battery only half-discharged, then you can shorten the length of the charge accordingly. so remember that if you had a half discharged battery, then if you charged it for the full time, the extra charging time goes into overcharging the battery. now also remembering that charging a half-discharged battery more than 5 times in a row will bring on the "memory effect" problem, as stated above.

Do this to maintain your nicad packs, and you should get much more than the 2 years you're getting right now. however, if you're cycling your battery once a day non-stop, then 2 years sounds normal..

What we enjoy or appreciate is apparently of little or no
consequence to the likes of Timmy and his ilk. They want to protect us
from the annoyance or temptation of learning what is currently available
from other hobbyists. They are afraid, I guess, that we might spend our
own money unwisely.

Well this guy, for one, has been whining loudly about it:
timmy232132@aol.com . he may be one of the ringleaders and perhaps a word
or two directed to him directly might convince him that being a "news
group nanny" is very annoying to the regular users.

filters are not the real, long term solution. Filters just cover up the
symptoms: the spam. The real solution would be to stop the spam from being
posted in the first place. as timmy stated, filters are just not standard.
timmy has a good point: someone please just put up a god damn marketplace
group!!
then the FS guys can post all they want without interference.

2646. Best Software for Pro-2006/OS456 Lite combo??

Newsgroup: rec.radio.scanner
Date: 2001-08-01 03:32:31 UTC
From: Sandlapper <bbutler@home.com>

FBI technology raises privacy issues
By Richard Willing
USA TODAY

An alleged bookmaker with organized crime ties is challenging the FBI's use of a computer bugging device that allowed agents to break into secure files the government says contained his gambling records.

Federal Judge Nicholas Politan of Newark, N.J., heard arguments Monday on the motion by alleged bookmaker Nicodemo Scarfo Jr., 36, to suppress information gathered from a surveillance device called a ''key logger system'' that FBI agents placed on his computer in 1999.

The device, which keeps track of keystrokes as they are made on a computer terminal's keyboard, allowed the FBI to get the password to files that Scarfo had protected with a sophisticated scrambling program.

Politan asked lawyers for the U.S. government and Scarfo to give him more information about the process. The judge did not say when he would rule.

Privacy watchdogs nationwide have cast the case as the latest example of how technology is threatening privacy rights. The case is the first known example of the government's use of keystroke monitoring, a process that one advocate called ''extremely troubling.''

''When you're talking about gathering up everything some person has typed, every stroke, you're getting very close to the kind of general search that the Constitution doesn't allow,'' says David Sobel, counsel for the Electronic Privacy Information Center, a privacy advocacy group in Washington. ''It's as if the government had a warrant to seize one book in your house, but was also allowed to haul out everything that's in there.''

Papers filed in the case and posted on the center's Web site tell this story:

In January 1999, FBI agents raided a business run by Scarfo in Belleville, N.J., and used a search warrant to justify copying the contents of his computer. But agents were unable to open one computer file, believed to contain bookmaking records. The scrambling program protected the file.

A U.S. magistrate authorized a second search warrant to enable agents to learn the password to the protected program by monitoring Scarfo's keystrokes.

Keyboard bugs can be software that is loaded onto a computer, or attachments that can be placed on the computer-keyboard link or on the keyboard itself. The FBI did not specify what type was used.

Scarfo's father, Nicodemo ''Little Nicky'' Scarfo, is serving a life sentence for running Philadelphia's organized crime family.

The younger Scarfo was suspected of using the business as a front for a bookmaking and loan-sharking operation.

Information from the computer files decoded by the FBI helped lead authorities to charge Scarfo and another New Jersey man, Frank Paolercio, 32, with gambling and extortion in June 2000.

Scarfo's lawyers say the government should have been required to seek a court-ordered wiretap rather than a search warrant. Wiretap orders are harder to get, limit surveillance to specific areas and prevent broad intelligence gathering.

In seeking the order to plant the bug, federal prosecutor Ronald Wigler said U.S. wiretap law did not apply because ''no wire, oral or electronic communications (would be) captured.''

Keystroke monitoring was developed in the 1990s, and privacy experts say U.S. law does not appear to cover the new technology. In 1999, the Clinton administration failed to get Congress to pass a law authorizing the type of surveillance at issue in the Scarfo case.

Scarfo was known for his interests in computing and software. In the 1980s, while prosecutors pursued his father, he worked for a software company in Florida.

http://www.usatoday.com/usatonline/20010731/3518716s.htm

Much of this technology has been around since the mid '80s. We have been using radios that receive what comes off your PC monitor for years. It is a very simple technique.

You bet! Timmy is a meddlesome little newsgroup busybody. He wants to be sure that we only spend our money on things that Timmy thinks are wise and prudent. Timmy is also afraid that someone might sell his own property and receive some money for it. Timmy thinks THAT is wrong because some people don't have things to sell and then they would feel bad. And Timmy thinks that we shouldn't make other people feel bad. Timmy thinks that the best way to keep other people from feeling jealous is to be sure that no one sells anything because others might not have anything to sell or have any money to buy what others are selling. Timmy thinks that sometimes things get sold for too MUCH money on E-Bay and that is REALLY bad! Timmy thinks that everyone should just STOP because it makes Timmy sooo angry to see commercialism and capitalism at work. Timmy just wants you all to STOP all that nasty stuff and just talk about what Timmy wants to talk about!!! You see, this is TIMMY'S news group!

The mouse does work with Probe!

It's the "best" controlling software I've used with my PRO-2006/OS456 and PRO-2042/OS535 scanners. The many various features makes it out shine all the rest. The only downside is the limited radio/interface support.

Have you checked the users manual to be sure that this scanner is programmable and will cover that frequency range? If it IS able to cover that frequency range, then the problem is not unique. It is currently illegal (in the USA and other places I'm sure) to sell a scanner that can scan these 900 frequencies. They ship a scanner that CAN scan them, but they program them NOT to. You may have to do a scanner RESET on it, and reprogram the frequencies in manually. However, realize that once you program your scanner with these frequencies, the scanner is illegal. Remember the key sequence to reset in case you need to do it in hurry!

Can you get the simple fact that THIS IS NOT A MARKETPLACE TYPE OF NEWSGROUP!!!! The trash doen't belong here at all!!! The newsgroup police seem to be trying to restore this newsgroup to it's original discussion state. I don't know why the FS people seem to think that they can somehow turn this newsgroup into a marketplace. It's just not going to happen. It's clearly stated in that charter that this is a DISCUSSION newsgroup, and that will be enforced by the newsgroup police.

2662. WTB : Leather Case for Pro-43 / 64 scanner

Newsgroup: rec.radio.scanner
Date: 2001-08-01 05:01:06 UTC
From: offdan43@aol.com

Source record: 62078

There were custom leather cases avaliable from Radio Shack for the Pro 64
series that would also fit the Pro-43 scanner. It had a big zipper on the
bottom that would go from one side to the other.
If you have one available for sale, or know where they can still be purchased,
please e-mail me. Thank you.
Dan

what is the point of telling us to watch out. If you call us all dumb fuck. ya goof. Most of us would not even listen to a troll like you. One minute telling everyone to be careful and not buy from this person. Then right after you call us all dumb fucks. I am lost. who is the dumb fuck. We never sent money to someone that screwed us over. + if you woulda been smart you woulda kept the serial # for the Money order and cancelled it or even tracked it. Canadians have a hard time cashing US money orders if they aren't the international type. But if you are gonna whine and snivel on here, why call all us other newsgroup readers dumb fucks.

OK, I want to DISCUSS the sale of scanners and related equipment. Any individual who has this type of equipment for sale or for auction, please post it, so we can DISCUSS the equipment, it's features and current market value. Some of us might also want to DISCUSS the possible purchase of the equipment. I've seen some pretty interesting DISCUSSIONS regarding various sales and auctions, and I enjoy reading these topics and DISCUSSING them with others.

Hello. Dont feel bad about no reply from Pozilla Support. I have been calling them for over a week. I too am using the WinScan Ver. 1.0 for a Uniden 780 EDACS scanner. I am haveing alot of problems with it ranging from display problems on my computer to intermitant problems with the EDACS trunking while using the PC to the scanner. I would think that after you spend $50- 60 on someones product, you would atleast get one call back. I think we are all in the same boat. Good luck on your end!

Refer to this site: http://www.gebhart-sbg.at/download/ and download PDW1.09 ,you WONT need a discrim tap to decode 90% of the Pagers (only if you want to do Mobitex) and it works better that POCSAG when setup right ,also decode's MOBITEX ,FLEX and ACARS etc etc

Make sure that you set your line in and scanner volume right (just set you PC line-in or mic to one level and then play around with the scanner volume or visa versa till you get it decoding with no errors) it might take a little time but beats stuffing round putting in a Discrim Tap ,anyway its all in the help file!!

Have fun.

AJ.

P.S Read the .nfo in the zip for registration code ;)

We used to have a person on this NG who was doing rogue cancelling about 2
years ago.
He was caught, & his abusive actions online caused him to lose his (cable TV
company) ISP.
However, he died just over a year ago.

Justice does prevail!

What you are most likely hearing in oth targeting data. This is downlinked
from a satellite. The other part of this system is the link 11 on hf 2-30 mhz.
(btw: oth stands for over the horizon) The system works with all the other
navy ships and airborne aircraft, they all share thier info on the system so
that thier fire control systems all have the same information. Basically a
ship in the mediteranian and a ship in the pacific would all see the same
information on "Targets"

Uniden also wants over 50 dollars for the pack. (By the
way, you can use either BP2500 or BP3000 packs.)

I suggest you check with a few of the companies that
rebuild packs. They may have some in stock possibly at a
lower price. A few good places are www.nicdlady.com (which
I have used), and www.primecell.com which is good also.

If you go with a rebuilt pack, I highly recommend you purchase
one that has been rebuilt with the newer NiMH batteries rather then
NiCads. They will run the scanner hours longer on a full charge,
and do not suffer from the "memory effect".

I beg to differ. If there's no stated prohibition against posting for
sale/for auction messages, then you should be able to. As I stated before,
if you don't like them, don't read them. And set up your newsreader to
filter them out. Any decent newsreader has filters.

So where do we draw the line? Do we not let anyone post URL's for their scanner-related websites because it's considered spamming? Or do we not let people post frequencies for their area because nobody in other parts of the country would be able to hear them? Sorry, but we can't tailor the newsgroup to fit everyone's personal tastes. That's why it's up to each particular reader to either filter out or simply ignore what they don't want to read.

Frankly, I'd much rather have on-topic for sale posts here than all the off-topic bickering and racial garbage you see on rec.radio.shortwave.

Tom

2679. Re: NiCads for BC2500

Newsgroup: rec.radio.scanner
Date: 2001-08-01 13:22:40 UTC
From: pat.szuch@swagelok.com
Message-ID: <761a8bd8.0108010522.e840be3@posting.google.com>
Source record: 62096
Cross-posted to: rec.radio.scanner,sci.chem.electrochem.battery

I am familiar with the common causes of NiCad failure and have tried reasonably hard to avoid the practices you mentioned (not draining battery before recharging, severe over-charging, etc.). I have one of the very early model BC2500XLTs which tend to drain the batteries constantly, even when the power is off. Thus, if I leave the unit sitting for 3-4 days after a full charge, it will have no battery power at that time. I believe this constant battery drain is the cause of some of my NiCad problems. I generally try to remember to take the NiCad pack off the radio when not in use, but there are times I forget and leave it on for weeks at a time. I am guessing that the slow battery drain is damaging the batteries after a period of time. I have a friend with a newer model BC2500XLT (battery drain problem fixed) and he gets much better NiCad pack life than I do (probably 4-5 years before replacement is necessary). His charging procedures are similar to mine, so I have to believe my scanner is causing much of my problems. Reading through old newsgroup posts, I do see that many BC2500XLT and BC3000XLT owners are reporting similar battery pack life (2 years) as I am, so I would not be too quick to blame it all on poor charging procedures. The common opinion seems to be that the BC2500/3000XLT is a nice scanner, but the battery packs are terrible.

My original post stated that there are 3 batteries inside my pack (2 approx. AA size and 1 half size). It turns out that there are actually 5 identical (all the 1/2 size) cells in there. I was confused because a couple pairs were wrapped together in paper, and looked like single, larger batteries. Anyway, I apparently need 5 1.2V cells for this battery pack. A local electronics store sells them for around $5.00/battery. Does this sound about right? At that price, it will cost me around $25.00 to rebuild my pack, which is still way less than the $65.00 it will cost to purchase a new pack locally. I'm going to shop around a bit more, as I'm also interested in trying the NiMH style cells.

Regards,
Patrick Szuch

>used as mutual aid?

121.5 is like CB channel 9 for aviators. If you lose communications with Air Traffic Controllers, set your transponder squawk to 7600 and go to 121.5 to re-establish. Most Center, Approach, and Tower controllers have this channel available to them as well as many flight service stations (where pilots can open and close flight plans, get NOTAM updates, weather information, and file pilot weather reports or other important observations concerning air safety).

If you have an in-flight emergency and you weren't in radio contact with anyone, you can use 121.5 to yell for help. Many pilots monitor this frequency and will relay any distress calls they may hear. When I fly over sparsely populated areas, I always keep one radio on 121.5.

Finally, in the event you are intercepted by the military (a rare event for civilian aircraft, and I hope it stays that way) you are expected to establish communications on 121.5 if you can. OT: There is a backup method of communicating with aircraft on an intercept by rolling, pitching, and yawing, if no radio communications can be established. This is one of many reasons the Peruvians were so widely criticized for shooting down a civilian aircraft mistakenly thought to be a drug runner.

Emergency Landing Transmitters (ELT) work on this frequency. They *should* put a loud whooping AM siren sound on the air. There are a few "smart" ELTs which also transmit information on last known position.

ELTs also work on 243 MHz and 406 MHz. Supposedly the Coast Guard is trying to get everyone to make a transition to the newer 406 MHz ELTs.

Frankly, I have a bad attitude about ELT performance. Over 99% of all ELTs you hear are false alarms. The problems range from poor installation on airframes, obsolete shock switches, and poor landing technique. Finding an active ELT can take as much as a day or more. Were they not required by regulation, I wouldn't bother installing or maintaining one. A hand-held aviation radio in a flight bag is better insurance, more reliable, and more useful.

I don't know the specifics of ASTRO enough to comment on whether
doppler effects on radio signals are a factor. I do know that they
must be using multiple radio sites (as you would with a cellular
system) and that aircraft can really mess up that pretty looking plan.

I don't believe they are actually sent as tones on a cell system.
I think all of the call nogotiating stuff is done quietly. It would
probably be a little bothersome to listen to that every time you placed
a call.

Cellular sytems and trunked systems are different. In a cellular system, the adjacent sites broadcast on different frequencies. As you move away from one site and into the range of another site, your cell phone changes frequency.

In a trunking system, all transmitter site operate on the same frequency(ies). The sites are synchronized to minimize interference effects. As you move away from one site and into the range of another site, your receiver stays tuned to the same frequency.

the dtmf is sent on the data control channel as actual data. the only way you can find someones phone number with a program that is out there. but I have never succeeded to get it to work. the only problem is the software like most other software, is that it is illegal. it will show you the users phone # and ESN. but I think technology changed on analog sites in the states and canada.

The BC2500XLT has a very high threshold voltage at which it decides the battery is discharged. It may be that over time your battery's at-rest voltage has come down a bit due to being overcharged by the charger regularly, and that's made it so that even when fully charged the voltage is .05 - .1 v lower than it should be, so that the scanner decides it's fully discharged even when it's still 90% full. Your battery may still have most Of it's capacity, but just isn't using it. I vaguely recall hearing about a way to adjust that threshold voltage, but I have no idea where. :(Perhaps some web searching would turn something up. I think it's a known problem.

2692. Detroit area Woodward Dream Cruise Frequencies

Newsgroup: rec.radio.scanner
Date: 2001-08-01 17:04:54 UTC
From: "Leland C. Scott" <no-spam@junk-mail.net>
Message-ID: <tmgdl2a3rj8ha3@corp.supernews.com>
Source record: 62008
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.scanner

Does anybody know what "special" frequencies will be in use for the Detroit area Woodward Dream Cruise later this month? Also what Ham Radio frequencies, repeaters or simplex, will be in use during the event weekend, and by which radio club(s)?

2693. ACARS Log Analyser for Windows - Version 1.0.15 now available

Newsgroup: rec.radio.scanner
Date: 2001-08-01 17:25:59 UTC
From: mark.avey@virgin.net
Message-ID: <21fc4b52.0108010925.7fc1c4ac@posting.google.com>
Source record: 62009

We are pleased to announce that version 1.0.15 of Log Analyser for Windows is now available from http://www.acarsonline.co.uk

This release offers a number of enhancements:

Lowe Airmaster 3/2000 support

Added a new Statistics page

Added "Heard Aircraft" management so you can now see how many aircraft of a particular fleet you have heard

Aircraft Database can now be updated by Importing the CSV file available from ACARS Link (http://www.acarslink.com/alaceqip.htm)

List of New Aircraft displayed after importing a log file

Improved Text output

This is a FREE upgrade.

Thanks,

Mark Avey

2697. Re: Detroit area Woodward Dream Cruise Frequencies

Newsgroup: rec.radio.scanner
Date: 2001-08-01 18:37:07 UTC
From: Tim <nightwatch01@home.com>
Message-ID: <3B683E3E.972505FB@home.com>
Source record: 62013

Very active ones will include:

A couple talk groups on the Oakland County Sheriff Dept 800MHz TRS.

155.865MHz simplex -- The Michigan Emergency Public Safety System ("MEPSS," law enforcement mutual aid, kinda like a state version of the national 155.475). Most of the venues along the Woodward Avenue route utilize VHF-High radio systems for LE operations, so MEPSS will be the one common channel used by the PDs for direct Dream Cruise ops, while their nominal dispatch & car to car channels will also of course have some related comms.

123.025MHz AM -- airspace coordination (& general BS'ing) by media & LE helos.

122.750MHz AM -- airspace coord/BS'ing by aircraft towing advertising banners.

Lots of FRS in use by spectators & cruisers.

The Dream Cruise organizers will probably be using Nextels or handheld on a UHF repeater.

I can't remember what the main EMS freqs will be. 155.280MHz is a statewide EMS disaster common channel, but it's also used for routine dispatch ops by AMR ambulance service in Oakland County...

2703. Re: FDNY - PL Tones

Newsgroup: rec.radio.scanner
Date: 2001-08-01 22:05:02 UTC
From: Walt Bertram <wbertram@worldnet.att.net>
Message-ID: <3B687D0C.9A481AC2@worldnet.att.net>
Source record: 62019

Because several agencies are sharing the same frequency, some means is
needed to discriminate between several agencies on the same
frequency. In the example at the start of this thread, New York City
and Monmouth County, NJ, are sharing a frequency, and the listener can
receive transmissions from both agencies.

The solution is for different agencies to transmit sub-audible tones
along with the voice transmissions. The receivers only break squelch
if they receive the appropriate tone. This is referred to as CTCSS,
or Private Line (PL), a Motorola term. They also accomplish the same
end by sending sub-audible digital signals, the Motorola term is
Digital Private Line, or DPL. Most of the recent scanner releases can
be programmed to only break squelch on the programmed sub-audible
signal.

Again, referring to the start of this thread, if the listener programs
in PL=192.8, they will hear only the Monmouth County NJ
transmissions. If they program in PL=196.2, they will hear only the
New York transmissions.

Message-ID: <20010801192915.27095.00001229@mb-md.aol.com>
Source record: 62023

Hey, all I live on Long Island. I recently took the Orient Point ferry to CT, which happens to pass right by Plum Island. For those of you who don't know, Plum Island is a very top secret Dept of Agriculture island which is used for animal testing of all sorts of nasty diseases. It is guarded by the F.B.I, as well as USDA Agents. So when I found their scanner frequency, i just knew I had to bring my scanner along. The frequency is 36.43. Now, i was only able to receive one transmission on that freq. All the other times, there were several different trunk ID's that I got at various times, all were static, except for that one which enabled me to hear the short spurt of a conversation between an agents. My question is this, why would that frequency have so many different trunk ID's on it that are nothing but static? Is it just for the purpose of making it a bit more difficult to listen in on what goes on there? Thanks, folks, take acre and be safe

Jay Cohen, Long Island, NY

I do not see any proof of your accusations here man.
First message says he is sending it the next day. Second
message is from the next day, and he says he is sending
it out. Where is the crime?

You are going to need something substantial before you
jump the gun and essentially call the guy a thief. Did you
ever think of just calling him up?

I might also add that in doing business with Phil, I found him
to be honest and straight forward. He delivered a scanner to
me as promised and it is in excellent working condition.

I would do business with Phil again any time.

Sorry, not scanner related:

Just a little trivia. This is the island Thomas Harris chose in the
book "Silence Of The Lambs" as the fake vacation spot offered
to Dr. Hannibal Lecter. Lecter called it "anthrax island".

It is rumored that they conduct biological warfare research there.
Also, research related to the possible effects of biological agents
dispensed by terrorists.

I'm sure someone has tapped the pro 2050 since I can find which IC and pin
to use..... unfortunatly someone (I assume at the factory) has scrached
off
the IC numbers on the top side of the board (the side with 3 IC's) which is
also where I assume the discriminator chip is since I can't find it on the
other side.

ANY HELP will be appreciated

thanks

I live in Ottawa, ON, and here the police moved to a digital Ericsson system
a couple of years ago. I'm a newbie to this, just played around with my
friend's radio scanner (great fun) and he was saying he used to be able to
get police but ever since they moved to the Ericsson digital he lost 'em.
Is there anyway of getting police radio now that they're on the digital
system?

Okay
Let me explain
This guy purchased an AOR 8200B from us and decided he did not like it and asked if he could change it for an Alinco DJX-2000, Now he made all sorts of claims about this AOR being the biggest pile of trash ever made (strange there are so many satisfied people out there with them) anyway I agreed to send an alinco and charge him an additional $100 which he agreed to.
Anyway I sent out the Alinco before receiving the AOR back,,, now the AOR arrived in a copal of days and I had to sell it as used and heedless to say the new owner is completely happy...
Anyway, This guy gets the Alinco and states it smells of smoke and looks like the battery has a small mark on it, Now this was a brand new and unopened box, well I have offered to replace it with another new unit FREE of charge ad this guy will not send his original unit back until he receives a replacement from us, now I do not now of a company out there who will replace a unit without first receiving the other unit back.
Anyway he is now upset at me and I guess wishes to attempt for me to look bad, Well I have put across my version
So there you have it
For what it was worth
Thanks for reading
Best Regards

2721. PRO 43 speaker

Newsgroup: rec.radio.scanner
Date: 2001-08-02 03:16:58 UTC
From: kevsdad@altavista.net
Message-ID: <74607034.0108011916.53ac6bdc@posting.google.com>
Source record: 62037

I have a PRO 43, about 10 years old that has no output from the internal speaker, but an external speaker plugged into the headphone jack works fine. It's just a bit of a pain to have that extra appendage on the unit all the time. Anyone have a clue what it might cost me to have the internal speaker replaced? I don't think I want RS to do it as I've had a certain mod done...

I'd appreciate any advice.

Scott

2722. Trunking scanner

Newsgroup: rec.radio.scanner
Date: 2001-08-02 03:25:03 UTC

Message-ID: <74607034.0108011925.3f894ded@posting.google.com>
Source record: 62038

I hope to get a lot of feedback on this one.

I've been scanning on and off for about 10 years, first in the Chicago area, now in Dallas, all on my PRO 43. I'd like to move into a trunking scanner in the next couple of months and would appreciate some hands-on advice from those who are already involved.

What should I look for? I know there are several types of trunking systems, which do I have to have? Are the RS PRO2052 and/or the PRO 92 ok for starters? Are the AOR units worth the extra $$? Bearcats any good?? Anyone have good/bad experience w/scanners on EBay?

Whatever else...

Any advice is appreciated. Thanks.

My favorite trunking scanner is the BC780XLT. It is the finest piece of equipment I own in my opinion. The Pro-92 is an excellent scanner if you like to have portables. I am very happy with both of these radios.

Check out the Pro 2050 which is on sale now at RS.
It is an excellant trunk tracking scanner and a very good value right
now. They also have a handheld that will track 2 banks of trunking
frequencies on sale right now. The 2050 outperforms any of my other
scanners by a long shot and is by far my favorite.

Regards,

Harry King

What scanners will pick up narrow band fm in the 72 to 75 mhz
frequency range? This band is used for ada hard of hearing
systems.
Information on new or older scanners that will do this would be
appreciated.

BOB

>This guy purchased an AOR 8200B from us

Us? Isn't it really just YOU Martyn? US? Where? You are a legit dealer? Do you have a store? If so, how can YOU be selling uncut receivers to the general public when other legit dealers cannot?

>anyway I agreed to
>send an alinco and charge him an additional $100 which he agreed to

Wow..he was dumb and you took advantage of that....

>Anyway I sent out the Alinco before receiving the AOR back,,,

Another example of DUMB, and you claim to be a dealer?

>copal

>heedless

>I do not now of a company ....

A professional radio dealer will learn how to spell.

>now I do not now of a company out there who will replace a unit without first receiving the other unit back.

Exactly, NO legit dealer would do that with 500 dollar plus radios. If you thought that was an expression of goodwill, you learned a costly lesson on how it was NOT.

>Anyway he is now upset at me and I guess wishes to attempt for me to look
>bad,

This makes no sense in either the US version or the King's English.

>So there you have it
>For what it was worth

You will not make much money conducting business in this fashion. However, in your defense, Dean was unfair to make a blanket statement of BEWARE without expressing himself. If your version is in fact the truth, then Dean should be more then happy with the outcome of your transaction.

Possibly the Air NG radar site at Orange CT?

Isn't there also some place on Long Island with weird radio/radar experiments? I recall being at Otis AFB in MA (I was Army, not AF) and talking with the Pave Paws about some innovative new radar experiment on a supposed "closed" base somewhere. I swear they said Long Island but the place had a very Native American name like Mawhawk or some such...may have been southern CT by New Haven.

Source record: 61953

The replacement speakers are not expensive at all; I can't remember exactly how much they were but it was around $10 I think...I replaced both of them in my two PRO-43s, mostly because the original speaker was rated at about 200mW as I recall and the newer ones much higher. They had a lot of problems with the original ones and when one of mine crapped out I fixed 'em both at the same time. If you are comfortable taking your 43 down to the level you can get to the speaker you'll have no problem replacing it.

Scammed? How do you figure? You're protected by using your credit card. What the real problem here is that you're a pissy, impatient little runt who when he doesn't get what he wants tries to damage the reputation of a company who is widely respected for its responsiveness to its customers. If you're not happy with their service cancel your credit card. Or shut the hell up.

Had the SAME problem about a year ago. Never had anything charged to my card,
but NEVER got what I ordered. Johnathan gave me the same song & dance (Ooops
sorry something musta got messed up here). Nothing I ordered was restricted
from being imported (think it was a computer interface and softcase for my
AOR AR8200). Finally found them here
in the states. Javiation USE to be good,
got my first order from them with no problem.....after that it all went down
hill.
I'll NEVER order from them again !!!!!!
And yes I called too... stayed up til 3am
just to call and wasted $ on long distance.

To be most effective, place the gentleman's name in the subject line - such as "Beware of Joe Blow". That way, anyone doing a search for information about Joe Blow through Deja News (now Google) will be able to see your warning and stay away from the guy.

How about a re-post with a proper title?

Thanks for the warning...

You have got to be kidding me!

Jonathan Clough and his team at JAVIATION are among the most respected of radio dealers in the USA and I would venture, the world for that matter.

For you to publicly trounce this company is commensurate with a recent rash of "crybabies" who seem to have proliferated these newsgroups of late.

Whining, moaning and crying about every little thing, none at all related to the discussion of the scanning hobby.

I have personally dealt with Jonathan at JAVIATION numerous times, and aside from great products, great prices, and great service, he has been more then accomodating to me on many occassions. Way above and beyond the call of duty.

You have not been scammed. I trust there is another side to this story, and I realize Jonathan has just moved his company, and is very busy, but I think we'd all love to hear from him on this.

Good for you. I am sure "Martyn" is trying to be a square shooter, however, his continued silence on the important questions I and others have raised regarding his dealership and ability to sell uncut radios is troubling.

Hard to do if not impossible. At least nothing is available that I
know of.

The scanner is really susceptible to images, so just scan around the
cell frequencies and you will get a lot of hits.

What they expected at that time was that every
male would drill as a community, much like the
Swiss did. And for a time they did so.

We do not want a professional army, or police force.
What is needed is for all to serve and protect their
communities.

I've bought several radios from Jonathan (one just two weeks ago), never had a problem, and always prompt communications.....??????????????
In fact the first one, over four years ago, was a Yupi 7100 that was shipped without an a/c adapter (which I found out was normal, since they weren't meant for US import), but Jonathan was quick to admit in our initial correspondence he hadn't pointed that out, and immediately issued a credit for me buying one locally. Now if that isn't going above and beyond good service, I don't know what is.....
Don

Plumb Island is not all that secret to be honest,
The Plumb is a National Wildlife Refuge and is open for short periods during the year for Bird Watchers.

The National Park Service is charged with the administration and protection of Plumb, the FBI is not guarding it though they have jurisdiction over crimes there as it is Federal Land. (The FBI does have a Uniformed Police Force but only in DC).

The Frequency 36.43 is assigned to the USDA
but it is unlikely that it is on a Trunked System.
If they want security for Coms. it will be Digital/Encrypted.

I believe you listen at the frequency + twice the IF. Most scanners have an IF of 10.7 MHZ, so listen at 21.4 higher than the original frequency. I have a scanner that picks up cellular images from around 890-920 MHZ, so it would appear that this is the correct equation.

Belive me, I don't complain about much. I don't mind paying for something if it is exactly as represented by thew seller. Something was definitely wrong with the condition of this radio when I got it. I have bought thousands of dollars worth of new equipment and never have I has something come in the condition this one came in. The radio had a cigarette smoke smell, the battery was badly scratched, the accessories were wrapped in crumpled up bags, the battery does not hold a charge for very long. There are other things but the bottom line is that I have paid over $600 for a used radio that was supposed to be new. On top of it he charged me $14.00 for shipping and insurance and did not even insure. The package came in with a $5.00 label on the US Postal box. Martyn did not even put packing in the box...he just dropped the radio box in a box 2.5 times its size and let it bounce around during shipping. When I sent the AOR back I packed it with popcorn and insured it for the proper amount the lady at the post office said the shipping would be $14.00 without insurance and $15.25 with insurance. I paid to have it insured. I have a right to be upset.

I am thinking of buying a modified PRO-2030 for my first scanner. Is this a decent scanner for a rookie or should I look into buying something else. Are the winradio cards any good?

Thanks,

Chris

If the radio you received was not brand new then I won't do
business with Martyn again.

The AR8200MKII covers 100kHz. to 2.04GHz. ,
however is only considered effective down to 530kHz.
I imagine several other AOR products may be similar.

I will not be buying another product from Pozilla. I own Winscan 1.0 and 2.1 for the BC245 and 895.
The software has intermittant bugs and it appears they won't be fixed. I wrote to their tech support
and was ignored for several weeks. I was able to speak to the owner of the company by phone, he
thought my problem was a known bug but wasn't willing to say much. Talking to him was like pulling
teeth. He didn't ask for my name, or show any signs of interest in customer satisfaction. My impressions
is that this company is not interested in a future.

A week or so later I got a response to my original email from their tech support. No admission that
these might be bugs. The person responding told me my problem was related to the file with the
possibility of file corruption. I had already told them I was able to duplicate the same problem on
2 computers. Nix the bad file theory.

The problem you describe seems too big to have been released in the final version, but it doesn't
surprise me with Pozilla. With my software the banks all reset to conventional and must be reset to
Motorola, EDACS, etc.

Good luck but write off these Pozilla guys.

When the AOR was retured to Martyn, I paid an additional amount of money above what I already paid so I could purchase the Alinco. Martyn had my credit card number and sent me the new unit before I he received the old one. I told him I appreciated that and was impressed right up until I received the Alinco in the mail which I have already explained was obviously previously used. The problem I have now is a matter of trust. I don't want to be out all that money totally if I send the radio back to him and I get nothing in return. And Martyn doesn't trust me because he knows I have a legitimate gripe and he is afraid I would not return the original one and still keep the one he would send. What a mess! I have never cheated anyone in my life and have been honest. I don't need to swindle someone out of something that belongs to them but on the same token I don't like being taken advantage of. Well, enough said. I don't need a jury here because what is done is done. I just want people to know what transpired. Also Martyn e-mailed me and said this was good publicity and advertising for him. Oh well.

Given that the Alinco sells for about $60 less, that's an approx.
$160 restocking charge (~29%). That's alot.

You returned a used unit, and possibly received a used unit in return. It cost you the agreed upon $100 to "upgrade" models. What's your gripe? Do you seriously expect a reseller to provide new units on a trial basis and eat the cost of depreciation when it's returned used? That is unreasonable.

Apparently without properly researching its ability to meet your needs, you ordered a unit, and you got what you ordered. After you realized YOUR mistake, the reseller went out of his way to allow you to exchange that unit for a different one, something he had no obligation to do. He has now offered to exchange the second unit you received, but you're demanding to receive the replacement unit first?! That is unreasonable.

He has, by your own account, gone out of his way to please you, yet you're publicly maligning him. That is unreasonable.

He should just tell you to F.O.

Ordered a ZG ST screen through my usual on-line store three weeks ago. I found out yesteday that ZG still hasn't made the screen and probably won't for another two weeks (maybe more). This is the same thing that happened the last time I ordered a ZG screen. I waited almost six weeks for that one. The time before that I got the screen within three weeks but it fit like crap.

Yeah, I'm impatient and an idiot for repeatedly giving my business to a company that doesn't give a shit about customer service or quality. I just don't think I oughta have to wait six-plus weeks to get a windscreen when every other company that I have ever dealt with can get me the product within a day to a week at the most.

My on-line guy says the problems with ZG have been so numerous they're no longer going to sell them. He's proposing as an alternative a screen made by Powerbronze, a UK company. He says the product is well made and the company delivers when it says it will deliver, which is usually right away. I've heard that Powerbronze makes good stuff so I've decided to give them a shot.

Meanwhile those clowns at ZG can screw themselves. I'm through working on giving them my business.

2800. JAVIATION SITUATION MUCH IMPROVED!

It mounts to the front of a PRO2042 and is designed to deflect random ion particles, thereby reducing interference and increasing sensivity. On a good day, I expect to be able to pick up transmissions from Ferengi freighters in the third quandrant.

I'm a bit of a novice at this, but can anyone recommend something
with the following characteristics:

- a hand held radio that can be plugged into a terrestrial or cable
TV socket to receive the sound only of any TV station on that socket
- by preference it should also have complete LW/FM/AM/SW radio bands
- by preference it should have auto tune and digital display

Scott, that should work fine. Don't worry about loss in connectors/adapters. Properly installed connectors have at most 0.1db loss at freqs below 1GHz.

RG-6 coax is an excellent choice. As for 9913, it's great when new. However, since it uses an air dielectric, in time moisture will infiltrate and degrade performance. Here's what happens: The 9913 outer jacket is NOT a hermetic seal. On a hot day, the air inside the cable may reach 100+ degrees F. A thunderstorm breaks out dropping the temperature and wetting the outside of the cable. As the air inside contracts, some water vapor will be sucked in through the jacket. After a few years, the cable loss can increase significantly. I've heard horror stories of people removing a connector from 9913 after a few years and having water pour out on the floor!

Foam dielectric cables are much less prone to this, and solid dielectric cables like RG-8 are best of all in this regard (although a bit higher in loss).

PL-259 connectors will work fine up to at least 1 GHz. Their main disadvantage is their susceptibility to water infiltration. Go to Home Depot (electrical department) and by a brick of "duct seal" (black/grey stuff, costs about $2). Mold it like clay around the connector and cable, and you will have no problem. Forget about using tape.

Good Luck
Art Harris, N2AH

Hello all,

I occasionally post to this newsgroup as I am a scanner kinda guy, and also sell scanners on eBay. What are the guidelines for posting "For Auction" and "For sale" posts to this group.

I once posted a few FA's to this and also rec.radio.swap, and somebody w/ nothing better to do turned me in to my ISP. It was one post with 2 items up for auction. I don't know why they didn't send me e-mail first. SO....

What's the story in this NG.

Thanks,

Adam

Its a collectors item, that is if you collect them.

Though it is a crystal Scanner and falls of on the low and high rx ranges it
was a neat item for its time.

Range is from 30 to 500 ish MHz, but it needs crystals to run.

A min. of 50 channels and 800 Mhz is widely seen as the bare end of what most
Scanners would want/need.

Visit Radio Shack for clearance/discount items, the cut prices often when new
units come out and this would be a good chance to pick up a new unit.

Some Scanners will tune TV Audio Bands, this would be the best option.

Few Scanners (Handheld) offer LW/FM/AM/SW all at once, some do but few.

Only the Icom R-3 has a Video Display.

Also, the signal through the Cable may overload the Radio and would need a
"tuner" to split up all the channels that flow through the cable.

>
>What scanners cover the most band range?
>

Alinco DJ-X2 goes from 0.5 to 1000 MHz
and the Icom R-3 from 0.5 to 1500

These are handhelds, some Desktops do better but there is little beyond 800 MHz.

The Pro-2030 is a good unit with 80 channels , fair but there are newer units
with more memory; something that you seem to eat up quickly.

A word of warning on Modified units, if there is a problem with it, Radio Shack
may not even touch it or revert it back to normal operation when they fix it.

I haven't tried it yet, but it wouldn't take a hell of a lot to beat the
Winscan software.
I'll give it a try as soon as I can.

2826. DeDupe Freq. Database?

Newsgroup: rec.radio.scanner
Date: 2001-08-03 19:17:36 UTC
From: "Mark R. Smith" <mark1smi@cwnet.com>
Message-ID: <mark1smi-DF29CD.12173503082001@news.cwnet.com>
Source record: 61940

DeDupe Freq. Database?

Can anyone help?
I'm looking for a freeware program or script which will dedupe a database full of scanner frequencies. What I have done so far is extracted records for several counties from an old (1996) Spectrum Database CD and combined them to form one database of about 9000 records. In this new group of records there are frequencies which are listed more than once. What I would like to do is get rid of (delete) all of the frequencies which appear more than once. The two freeware database programs which I have been using to work with these .dbf files are DB Tools (http://www.yippee.net/html/win/business/title9955.htm) and Little List (http://www.rkwest.com/bus.shtml). I am aware of one shareware program called "Parserat" which will dedupe, but the unregistered version only handles 1000 records.
I'm posting to this newsgroup because we share common interests and other people in this NG might have good ideas on how they manage their frequencies.

I'm running Win9x and not controlling any scanners with the computer.

Any ideas would be very much appreciated.

Thankyou,
Mark

The AOR was deffective. You should not come to a conclusion without knowing the facts. I am not in the habbit of returning radios that work esspecially when I have to pay an additional $15.00 for shipping. I did my research very well. All indications weree that the AOR was a better radio. Have you ever bought anything that was deffective in your life? I do not need a jury. I am the one who got taken, I paid the money, I am not the seller. Maybe there will be a time when you are in a similar position and then the person that bent you over will tell you to as you put it F.O.

I have a Pro2066 that is in excellent condition with box and manual
that I would like to trade for a Pro91.

I also have a Pro2067 I would like to trade for a SC200 with
programming software, The pro2067 also is in excellent shape and i
have the box and manual for it.

Please email me directly

Thanks

Source record: 61804

I recently bought a Pro-2006 that has had the cell mod done...in fact, both diodes were clipped, so I guess the speed mod was also accomplished. What I don't know about is this miniature RCA jack on the back of the rig that has obviously been added by some previous owner. It's wired with shielded cable to a diode near TP2 on the circuit board and the other wire goes directly to the board close by. Is this the discreet audio mod?...or something else?
Thanks,

Sandlapper

It depends on where you live. That scanner is very sensitive. If you live in a big city, you will get a lot of interference from sources you don't want to pick up--this is due to the double conversion filtering, but is worse on this scanner than all the other double conversion scanners I have used.

If you live out in the sticks, you would like it, as you would pickup the good stuff really easily.

If something goes wrong with this scanner, you can buy another for about $70 on ebay which is about what RS would charge you to fix it. Note that like most scanners, you gotta get a date of mfg. code that is before March or April 94 if you want to modify it. It is the easiest scanner to modify ever made--you take off the top and clip a wire.

If you get a 31 inch antenna from some mobile radio shop, look in the yellow pages, you will only pay about $25 and you will get lots better reception. If you really want a good antenna read up on www.strongsignals.net about some different models and how they work.

Source record: 61813

Good Grief !!

Okay, I'm on my soap-box so delete if you want something
on-topic as this is definitely not ! No offense meant or taken to anyone here.

More and more I am confronted with better reasons to trash my TV
and turn on my radio. (Like you, of course, I own several). Why? Because
of the shoddy workmanship, lousy service and unrepentant greed of TV in
general and cable in particular.

The case in point here is : "COX CABLE" my local provider in Northern
Va. COX was once Media Gen'l and built up the finest system of cable service
in the Wash. D.C. metro area bar none. Than COX took over. The TV guide
(really magazine) has been replaced with the following choices:
1. Pay extra 20 bucks/ mo. to get the fancy "on-line" guide, oh, and also about
50+ plus channels of MUZAK. Like I really want to "watch" stereo music. Jeez!

2. Or I can buy a rag Cable Guide from TV-Guiide that is printed on newsprint
and during my trial sub. was cut off-center and crooked on EVERY issue. Not
likely.

The cables boxes are cheap trash. Who ever engineered them ought be bitch
slapped back to China. We used to get GE boxes that were simple, but did what
they were supposed to do and had avg. life of 5+ years. Now I get cheap crap
from "General Instruments" that I've had to replace already in just 4 mos. and
is so poorly engineered that if you hook it up to your stereo it will continue
to play last channel even AFTER you've turned the cable box off ! No lie. Every
one of my neighbors who has this set-up has exactly the same problem. What
a joke. How sad they think this is " to be expected." So they tell me. Groan.

Pay-Per-View (PPV) systems have become a voice-mail bad-trip that would be
funny if it weren't so pitiful. I tried to order "Crouching Tiger" tonite. In
the old system I could call, order, and be watching the PPV in literally ONE
minute or less. Not anymore. COX cable gave numbers that only allow the
selection of PPV's 24 - 72 hours in advance and din't even list ANY choices
for the movie I wanted !! DEspite that the Wash. Post showed 10 showing on
COX that nite. In fact, no movies were offered on their PPV menu unless they
were ordered at LEAST 24 hours in advance. Idiots!

I am so disgusted I can hardly keep from popping a cork, I tell you. But
that's okay,... Because I've got a scanner, a portable, and more and I can
just go park myself out on the carport and do almost whatever radio I want.
Talk, Music, Scanning, Ham. Radio is always there on some level. It costs
no more than the equipment needed to receive it. Heck, I don't even need

a radio as some of it you can get via the internet even with an out-dated, over-the hill system like I've got. Art Bell and Jeff Rense are probably the best of the "internet radio" offerings. But the real-deal is always there too.

Hi-tech is never a substitute for lo-quality, bad engineering and shitty service. Man, oh man. What I wouldn't give for a mountain-top, a sturdy tower, and a satellite dish.

See ya on the sky-waves,

Andrew / KG4JBM

Do you have a radio? Are you sitting in front of a computer? Do you, like so many others, have that computer attached to your radio (for packet or whatever)? Then a message about computer communications monitoring sounds fairly relevant to me.

What isn't relevant is all the crossposted newsgroups (which is why this will be my only response to this message outside of r.r.a.m).

Bearcat 220 Channel crystalless scanner - aircraft- marine- public service..

Low Band 32-50MHz
Aircraft 118-136MHz
Amateur 144-148MHz
High Band 148-174HMz
UHF Band 420.440-470MHz
UHF-T Band 470,0125-512.45MHz

Visually about 8+, electrically It does work! I checked it with a 2 m and a 440 repeater and they worked. How much better I don't know.

Asking $35.00 or offer

I think I bought this scanner in the middle '70s but I'm not sure.

Source record: 61823

The backlight on my PRO2022 has dissapeared. I noticed over the last few months the display dimming and now it's completely out. I asumed it may have been a blown globe, but it seems the globe is OK under a resistance measurement. The circuitry that runs the backlight is quite strange. It appears to be some sort of inverter circuit with a transformer output going straight to the lamp +ve wire.

Has anyone else had this problem and is it easily fixed?. I have a good electronic background, but don't have the schematic for this scanner.

Thanks for any help.

Mike

Go to www.pro-92.com and download the free 92WARE program. This contains a module which will convert a .spg file to an ascii file. Frequencies can be extracted from the ascii file. 92WARE has several other very useful modules.

Message-ID: <8FMa7.1113$yX4.84318@typhoon.hawaii.rr.com>
Source record: 61827

Since there are a few creative types out there, I'll ask what is probably a silly question:

Is there any way to compensate for the difference in volume from one bank to the next? I have to have the volume pretty high when listening to the police on 800 mhz, but when a fire call comes in on the next bank it sounds like, well, a fire station! VERY LOUD. Spare me the flames (ouch!), I'm bored tonight....

It's good to see we can all act like adults here.....

You stated you made your purchases on plastic. Correct? If you feel you have a claim, or didn't get what was a satisfactory deal, call the credit card company and have them fight it out for you. Make that 21.9 % APR work for you!!! It's pretty simple to do. Just call, send the item back, watch the tracking numbers and watch your account get credited. That way there's no newsgroups, no arguments, no public opinion.

Can the PRO-2050 frequency "step" size be selected or are you limited to the defaults? For instance, can you search in 12.5 kHz increments in the 163-173 MHz Federal Govt band? From the online manual it looks like you can't.

2875. A few Antenna Questions

Newsgroup: rec.radio.scanner
Date: 2001-08-04 15:00:26 UTC
From: cathexis@erols.com
Message-ID: <3b6c0bf6.735545007@news.erols.com>
Source record: 61839

Greetings,

I'd like to ask the antenna gurus a couple of questions.

1. What about nulls ?
I have heard that this is much more of a problem on VHF/UHF
than on HF. That even a good antenna won't get around nulls.

2. Can I use my hand=held to check for these nulls ?
My hand-held is AR8200MKII and seems to show a
lot of directivity sometimes.

3. How much antenna should I put on the chimney before I can
count on overloading the hand-held ? Is it not worth the risk?

An example of usage planned for would be to be out on the carport
at night with a discone on the roof and about 25-30 ft. of coax feed
down to the AR8200. Great idea ? Bad idea? Such a system would
obviously be occasional use only; should I bother to ground it ?
Buying a base station is not an option now, so I've got to work with
what I have.

TIA,

Andrew

2883. Re: A few Antenna Questions

Newsgroup: rec.radio.scanner
Date: 2001-08-04 19:01:53 UTC
From: Harris <n2ah@spam.sprynet.com>
Message-ID: <BEXa7.23835$uj2.4005744@news02.optonline.net>
Source record: 61848

I don't understand the question.

If you look at the azimuth pattern of any antenna, there will be peaks and nulls. Nulls are areas where the antenna response is poorer than in other areas. Reception would be weaker in the direction of the null. For vertical antennas, the nulls are usually not very deep. A discone would show a pattern of moderate peaks and nulls due to the "spokes" making up the disk and the cone. If you have a radio with a signal strength indicator, you could try monitoring a steady signal (like a NOAA weather broadcast) and see if rotating the antenna causes the signal strength to vary. Make sure that the results are repeatable, not just due to fading. And pick a reference signal that's less than full scale. I doubt if it's worth the effort.

What do you mean when you say your handheld shows a lot of directivity?

What kind of test do you plan to check for these nulls? Are you talking about transmitting on the discone and receiving on the handheld?

Do you mean just hooking up the handheld to a roof-mounted antenna? That may cause the handheld to overload depending on the signal handling capability of the handheld and the strength of the incoming signals. It won't damage the radio, but will cause "intermod" that will make listening unpleasant. Some radios have an attenuator that can be swithed in to minimize overload. Grounding at VHF is only important for lightning protection.

TV is a tool of Satan.
OK, mild overstatement, but TV still sucks, big time.
Many years ago I worked part time for a local UHF station.
I had nevere cared all that much for TV even before then.
But, after working there for several months (boy was I glad when our daughter
won a schoolership and I could quit!) I came to see that the whole TV game is
a giant con job. They pretend to provide you with news, and entertainment, in
turn for you watching their adds. The adds are the only thing on TV that get
any real money. Everything else is just filler.
Give up TV. Read. Listen to radio. learn to play a musical instrument.
Mentor a child. Help at a literacy center. LEarn how computers and networks
really work. Take up wood working. Birdwatching. Do anything that causes you
to think. I have become convinced that one purpose of TV is to full the
viewer. To turn off their brains. To make viewers become comatose couch
potatoes.
Life is for living. Not dieing to see the next episode of (fill in the blank).
Be thankfull that your TV service is so crappy. You are ahead of the game.
do not trust any network for news. They all exist to sell you something.
Not to pick on ABC/Disney but take a hard news stories ABC runs and compare to
the other three. News used to have an independent existence, but today it is
under entertainment.
Throw you TV away.
After a few weeks you will get over that addiction and get back to living!

It would be nice if the scanners had some sort of automatic volume
control, but they don't. The problem is with the transmitting sites.
They are not properly controlling their audio levels.

My local PD had a very well operating installation. Then the antenna
and console got zapped by lightning one night during a thunderstorm.
Took them 3 weeks to get it operating again, sort of. Two months
later the audio levels are still screwed up. One talker comes in at
normal audio level, and the dispatcher comes in at a whisper. And the
dispatcher on the next shift comes in at normal level. If I were an
officer on that squad I would be bitching like hell.

The problem is, the users of the system don't really know when it is
working normally, and when it is not. As a result they put up with a
lot of mis-adjusted equipment.

lol scusi. oh cbles. rofl. You start freaking on someone that was nice to mention that this was a radio scanner newsgroup. But you can't even spell SCSI right or Cable. I have never heard of a scusi adapter. + you have a major attitude problem. Who would want to buy from someone that snaps that fast at someone? What if he did want that scanner but was telling you that this was a radio newsgroup? You would of lost a potential buyer.

>I don't understand the question.

< Big Snip>

Thx. for replying. Please understand that any problem with understanding the questions probably is due to my need for education -Hope you're not too frustrated.

Basically, I mentioned to one Ham about errecting a roof-top Discone for occasional use on my scanner and he said in effect, that if the particular freqs I was looking for were " in a null " at that geographical area (My QTH) then no amount of extra antenna will make an appreciable difference.

Regarding " directivity" I meant that I was surprised that just rotating the unit around such that the antenna sweeps the horizon (N- to E -to S - to - W) could make such a difference in reception. I'm used to working HF on home-brewed randoms and dipoles that have almost no directivity when compared to other ant. types like say, a Yagi. Does that clarify?

As far as "overloading" goes, I only meant that I've read in various web-sites that if you put "too much" ant. on a hand-held it can not only cause signal overloading, but could actually be harmful in severe cases. I was asking for a comment on same.

The bottom line is simply this: Right now I have a AR8200MKII with the stock telescopic whip. In my small understanding I know that things like inductance and capacitance can affect reception and can be influenced by internal components. However, it is also my understanding that, despite what companies like C Crane and others say, receptivity has a whole lot more to do with your antenna system than any circuitry inside the radio. I know that it certainly has been MY experience. So,...If I wanted to maximize the radio's *receptivity*, not selectivity or sensitivity, how best to do it, how much improvement might I expect, and do you have any practical tips?

I'm not trying to "get" any particular freq., just looking to get the best and most out of what I've got -- that's all. I hope this is clear and hope that you'll be able to respond in a helpful way. Sorry if I caused anyone any confusion. Regards,

Andrew

Source record: 61865

Ok, that clears it up a bit. The "null" being referred to to could be several things. The transmitting station's antenna pattern might have a deliberate null in your direction. Or the signal might be blocked by a hill or building. Another culprit could be multipath. Have you ever noticed in your car, when you're stopped at a light, the FM station you're listening to might get noisy or disappear. If you move up a foot or two it comes back in. What happens is you're receiving one signal direct from the station, and another reflected off a building or water tower. If the two signals arrive exactly out of phase they will cancel each other out. Moving a bit changes the relative phase of the two signals and the music reappears. You can get the same effect walking around with your handheld.

The thing with handhelds is they were designed to work with a rubber duck antenna. They have a lot of gain because they expect to get only a small amount of signal from that rubber duck. They are also designed to be small, lightweight, and not put too much drain on the battery. That means things like a tracking preselector in the front end, or a "bullet-proof" mixer design are out of the question. If there were no local transmitters, connecting a good roof-mounted antenna would improve your range. But when a strong local signal comes on, the handheld will freak out.

A simple discone or ground plane mounted not too high (maybe even fed with lossy coax like RG-58) MAY be a good compromise. It might give better signal capture than the rubber duck, but not enough signal to overload the radio. You'll have to try a few things, experiment, and see what works. If your radio has an attenuator, switch it in when you get overload.

I think it would take something pretty extreme to actually damage the radio.

Good luck,
Art

Yeah! Speaker to Animals speaks the truth! My wife and I don't have a TV
and we get along fine. I have a couple scanners and a shortwave and I find
that there are plenty of much more fulfilling and mentally stimulating
programs on the radio than the mainstream, sell-out crap on the "boob tube."
We were just talking this afternoon how we don't want our children
(hopefully on the way soon!) to be brainless, vegetable television addicts.
I suggested that we listen to scanners and shortwave (which could present
some interesting radio-sharing issues, but better than fighting over the TV
remote).

Peace.

-BHall

Art,

Great reply ! Thanks a lot. I would enjoy experimenting with such
ideas. I think that antenna problems are one of the last areas in amateur
radio that really can be experimented upon in a way that matters. I'm
pretty sure my radio has an attenuator you can switch on/off. I was
just kinda worried that some passing police car might key his mike
and somehow fry the circuits in my unit.

thanks for your help,

Andrew

Baton Rouge, LA used to have a great cable system until Cox bought them out. I was paying for premium channels but every channel above 40 was fuzzy. After numerous complaints and visits by Cox, they told me that they would keep working on the problem but would have to charge me. Shortly after that I got a DSS (DirecTV) system and have not had any problems. Consistently clear pictures except for the occasional strong rain that may kill my signal for 5 to 10 minutes. My cable would sometimes be out for hours.

Anyway, as far as actually watching TV, I usually watch the History, Discovery, or Learning Channel and sometimes a movie (most of them bite now days). The rest of my free time is working on the computer (scanners or SW in the background) or working on some electronic or antenna project. In cool weather I do work outside in my shop.

Could also be an output for a remote recorder - though I dont recall the hookup point for that one and dont feel like popping the cover of mine to find out.
Any switches ?
You would be able to tell if it makes a clicking sound every time squelch is broken.

Jesse

Barry is an Australian troll. He doesn't know anything, especially emergency ops here in the US. Not that it would matter, as stupid and infantile as his posts are. I think he suffers from BDD (Brain-Deficit Disorder).

The easy thing to do is replace the EL panel only.
MUCH more soldering is involved w/LCD since you'd
need to solder about 10-15 pins for the display. The
LCD doesn't come with the EL anyway, so unless the LCD
is broken, just do the EL. It's easier than you think if you
have good skills and a desoldering tool to remove the old one.

Hhmmm. Did you ever check for RFI ? The power co. uses Line
Amps that can be very lossy under some conditions. Our cable here is mostly
above ground so you've got Cable, Telephone, and Power all on the same
pole. I remember reading somewhere (this ng?) about a guy who was always
on the power co. about RFI that loused up his Ham stuff. I think he used to
find them by driving slowly around the neighborhood with a plain vanilla
portable in the car and wait for whatever lossy site to light up the radio with
static. One bad source he never tracked down was finally found to be a dead
squirrell laying on the Line Amp (which was probably what killed it) and
buzzing out RFI like nobody's business. <grin>

funny you should mention the above. Seems to be the same crap
we've had to put up with around here. You like DSS huh? Don't know
much about it except I thought it was supposed to be way more expensive.

Likewise on the channel choices, though I will go news-junkie for
the occasional juicy scandal ala Chandra.(She's local news here in my
area). Only series I follow is regular season X-files. I do love the NASA
channel also. Basically, TV for me is non-fiction or maybe as an archival
source for my favorite movies I want to tape.

If you have a shortwave receiver which covers the longwave band (150-300 kHz),
check between 200-250 kHz. The Radio Shack wireless intercoms I have operate
on 200 kHz in narrow band FM.

Source record: 61756

Please go ahead.

Several months ago, after posting a more detailed description of the problems with Winscan 2.1 for the BC245 and BC895, I received responses from others indicating had similar problems. Also similar poor or lack of response from Pozilla's tech support.

The scanner market is relatively small. When you buy a product and made a reasonable attempt to read the instructions, duplicate the problem on 2 computers, contact the manufacturer and get 2 different opposite answers, you cannot help but feel ripped off.

You are left with the conclusion the software has problems. Others should know before buying that this company is willing to release a product with significant bugs, poor instructions and unwilling to fix or acknowledge the problems.

When you press the priority button, Channel 1 becomes your priority channel.
If you are listening to another channel and a transmission occurs on Channel
1, the radio will jump to channel 1.

Power companies are running all sorts of data down those AC lines.
Ever see a big air wound inductor up on a pole, it is there to isolate on leg from another. Most of the power company signlas are in th e 120 to 400KHZ range, but they can and do send a lot of other weird stuff.
Line losses can be very high vor non 60Hz sgnals, so they put amps in line.
I have only seen them way out in the country on EHT lines.
But, given the explsoion of digital data comms, I would not be suprised if they have added a bunch in cities.
Think about it, almost every building has power lines, what could be more universal.

I'm looking for some specific frequencies--the Sheriff's Departments in Davidosn, Davie and Randolph Counties, North Carolina. I've found several websites with frequencies listed for those counties, but it's always something like 30 frequencies listed for "Randolph, County of". I'm really not too interested in the comings and going of the guys fixing the roads and such, so that doesn't help too much.

Does anyone know of any sites where I can find this sort of info? Thanks.

From an ARRL bulletin...

The Hurricane Watch Net activated at 1800z (2 PM Eastern Daylight Time) Sunday, August 5, 2001, as Tropical Storm Barry strengthened in the Gulf of Mexico. Barry is expected to make landfall as a hurricane along the Florida Panhandle Monday morning, according to the National Weather Service.

On 14.325 MHz, the Hurricane Watch Net gathers real-time weather information that is relayed via National Hurricane Center station W4EHW to hurricane forecasters. The National Weather Service requested the activation as Barry, which had been drifting erratically in the Gulf, dramatically strengthened and turned northward this morning.

Hurricane Warnings have been posted along the Florida Gulf Coast from Pascagoula, Mississippi, to the mouth of the Ochlockonee River in Florida. The net will accept reports from in or near the affected region, according to Hurricane Watch Net Manager Jerry Herman, N3BDW.

A question about my PRO-2006: For DC power, the manual calls for 13.8
VDC, no milliamps specified. RatShack has one, specs at...
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F004%5F001
%5F001%5F000&product%5Fid=273%2D1631
that's a multiple voltage output, including 13 VDC at 800 mA. Would
this one be safe to use? I know that as a general rule, electronics
really hate to be fed low voltages...

All the Radio shack and Uniden scanners that say 13.8 volts in the manual and on the back of the scanner will work at 12 volts. The 13.8 is put there to let you know the excess voltage from a car, which varies but goes up to about 13.8, is safe.

Very cool topic. Where did you get your info from? Former employee?
What do you know about the wierd stuff -- just more RFI ? Never seen
those big air wound inductors -- would love to get my hands on one
whether I had a use for it or not.<grin> I've seen old-time Hams build
such things into outdoor antenna systems and such but I'm still too
much of a newbie to always know what I'm looking at.

When Cox brought the digital to my street I noticed on the tele. pole
across from my house that all of a sudden there was this funky-lookin'
box-thingy hanging down with little wires going off in all directions from
the bottom of it.(Some sorta junction box maybe??) Also I could swear
that they took the cable line and spiral wound it around an existing line.
(I hope not a power line!!). Lord only knows what interference or
cross-talk might be flying around up there on that pole.

BTW, I told my wife I wanted to look into switching to DSS or somesuch
today; She definitely gave me " The Look". Little does she realize this is
just round one in my master plan. <wink>

Master Plan To Get New Toys From Your Wife:

Round 1 : "Mention it" causually
Round 2: Extoll it's virtues even if she could care less.
Round 3: Make a "serious proposal", act surprised or hurt at her immediate NO!
Round 4: Make obvious attempt to butter her up; She spies it of course.

Round 5: Appeal to "reason", act forlorn. Her reaction: Angry frustation.
Round 6: You are tested with her request for somesuch. Say; YES !
Round 7: She gives in, but you are warned that, "That's it!"

I find some kinda pattern like the above almost always works. Key is not to use threats or bad language or put down her Mom. One wonders if wives see us as just as predictable as they are. Enough silliness/wisdom for now,

Andrew

Providing the current (mA) supplied is greater than the current required
your OK. Trouble starts to arise when its the other way around and a
device requires more current than can be supplied.

>For DC power, the manual calls for 13.8
>VDC, no milliamps specified.

Looking at other Radio Shack scanners, I see the spec for the Pro 2004 at 12 watts / 13.8 volts.

Using the formula "watts" divided by "volts" equals "amps," we come up close to the power requirement.

Did someone remove the A-C cord from the scanner? It might be easy to replace.

re the "spiral wound":

Often the cable companies will run a steel support cable on the poles,
and then hang the cable wire from the support wire by wrapping a
"spiral wound" wire around the two. I doubt they would ever hang the
cable wire from either power cables or telephone cables.

Walt

anything that is 300 - 500 ma should be plenty for a scanner. if the scanner is actually using less than the ma rating on the ac apapter, then the voltage will swing higher than what's printed on the ac adapter. then that brings in the possibility of over running your scanner. that applies if the ac adapter is of the typical unregulated ones. if you happen to find out that the radio shack one is regulated, then the voltage will stay at 13 volts, even if your scanner will be using less current then the ac adapter is rated for.

the other way around is when the ac adapter is to low current. sometimes if it's not too far off, it will still work. but the ac adapter will overheat and probably burn out.

looking at the radio shack page you gave, this looks like it gives out AC instead of DC. that is bad, you need DC. If that ac adapter is used, your scanner will emit a weird humming/buzzing noise, and if left on too long, your will fry your scanner. Looking around a bit on the radio shack site, I come up with a better one:

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTL

I don't know about Cox but Charter Communications SUCKS!

20% blackouts per month in the Mid-Michigan area....

Service takes up to a week to get done.

Duplicate billing.... Refusal to drop rates to lesser packages when choosing their cheaper packages. Took them six months and an attorney note to get them to stop billing me for service that I no longer wanted or had access to, (digital package) because I had returned the box six months prior to that.

Rates go up 3-5 bucks every six months.

Thier emergency alert systems have failed on more than one occasion this year alone. See below:

An official says a failed cable TV emergency alert system puts mid-Michigan lives at stake.

THE SAGINAW NEWS

Saginaw County Central Dispatch officials have filed a complaint with the Federal Communications Commission against Charter Communications Inc., charging the company's emergency alert system failed to work when a tornado was spotted near St. Charles last month.

Central Dispatch Deputy Director Barry L. Nelson said Charter's warning system - which affects about 120,000 mid-Michigan subscribers - has worked "off and on" the past two years, "and we're no closer to fixing it today than we were yesterday."

At worst, Nelson told the federal government, the lack of reliability could imperil lives during an emergency.

The county tested the system Wednesday morning, and it failed to activate, he said.

"We never know (if it works) until we need it, and the time we need it, it doesn't work," he said. "The taxpayers of this county should have the capability of being warned, and we can't even do that."

The Saginaw News could not reach Paul R. Pecora, Charter's group director of operations in Bay City, for comment Wednesday.

The FCC requires broadcast stations and cable systems to provide "aural and visual" emergency warnings. When the system does work, it interrupts programming with a blue screen and a voice-over alert on 32 channels, even though the cable company has a spectrum of about 200 channels, Nelson said.

In a complaint filed with the federal agency, Nelson said the system hasn't worked properly since April 4. He said the cable giant told him warning equipment was repaired and replaced.

When the tornado touched down in farm fields last month, Central Dispatch "tried many times" to access the alert system though land line and cell phones and radio dispatches, but failed. Charter blamed Central Dispatch's telephone system, but Nelson said that was untrue.

The day after the tornado, Nelson told the FCC, the company said workers were fixing the system.

The county wasn't notified earlier about the problem, and a backup isn't in place, he said.

"If that system is down, we're out of luck," Nelson said.

The deputy director said he will continue to work with the mid-Michigan cable company to iron out problems.

A Detroit area-based federal official handling the county's complaint referred questions to an agency spokeswoman in Washington, D.C., who said she had no information Wednesday.

Charter has handled numerous customer complaints about lost reception or channel lineup changes as it has spent $30 million to switch from analog to digital technology.

The television and media services provider, which purchased six mid-Michigan cable companies, has worked to eliminate complaints.

Barrie Barber covers politics and government for The Saginaw News. You may reach him at 776-9725.

Makes me want to tell them to shove their service somewhere the sun doesn't shine, but the location of where I live, I am not allowed ANY form of an antenna outside WHAT SO EVER! And the building that I live in is comparable to a lead box. So, I am sort of over that proverbial barrel to even get local news on the local channels.

I'm just starting to get into scanners, usually i research the heck out of something before i actually buy it... But this time I decided to be spontaneous.
So I've ended up with a Hand held Uniden BC45xlt, 29-512 mhz,
It works but i'm interested in picking up some signals better.
Should I buy a longer/better antenna?
Is a desktop scanner any different than a handheld, is there any difference other than channel memories and a 800mhz?

Thanks

gnome

Probably up to a quarter-mile or so. A outside antenna could boost that range perhaps out to nearly a mile. A better antenna is always a good idea but you may be in a location where people dont use cordless telephones.

I can hear lots of cordless telephone conversations (if I wanted to), but I live next to a large apartment complex.

In my experience, most telephone conversations are pretty dull fare. Police/public service/ambulance are more interesting.

But I did pick up one fonecon where a girl was trying to convince her boyfriend to come to her house for some sex but he was reluctant because he was out with his friend who was trying to score some drugs. She said if he could get some extasy then they both could come over and she would party with both of them. Only she was talking dirty and using explicit sexual words. Her boyfriend said he would call her back and then I lost the conversation. That was one of the most ususual conversations I have heard on my scanner.

Back when it was still legal to listen to cordless, I picked up a guy
calling a sex line. Never having experienced one before, I listened in.
Needless to say, I couldn't understand why the guy wanted to pay $4.95 a
minute for what he was listening to. He was on for around 20 minutes for a
grand total of $99. A number off a restroom wall would probably have been
cheaper.

Probably the best mod for this is the upgrade to 400 channels. As this
was the grand-daddy to the Pro-2006 it has most of the capabilities.
Speed increases, "extra" coverage of 72-76 MHz, and a few others. I
actually liked the 2004 better than all of my 2005's and 2006's only
because of the easier to deal with angled face. Of course I wouldn't give
up my 2005/6's for anything made prior to or since!

Don't know about Project 25, but the BC250 was a moderately popular
scanner. Never had one myself, but I've certainly heard of them on
several occasions!

All rigs have their own specs for sensitivity and selectivity, however the line isn't necessarily drawn between hand helds and desktops. Check out some of the antenna reviews over at www.strongsignals.net (did I get that right?). Of course, no one says you can't put a base antenna on a hand held. I've used several over the years including the Diamond and RS discones, the scanner beam from Grove, and a few others. All provide decent gains in reception directly (mostly) proportional to what I paid for each. Height always helps, too.

3000. Re: Channel Noise

Yes, that's a data "control" channel. A previous poster correctly identified is as part of the cellular phone system data control. Also, you'll find the control channel in any given group of trunked radio system frequencies. And like you, I also colloqually refer to it as the "diesel" channel. Essentially, in a trunked radio system like public service or cellular, each radio (or your cellphone in a cellular system), listens to this known control channel for "instructions" as to what to do next. I.e., go to such and such frequency and transmit, etc. There's a lot more to it than that, such as grouping radios by function, remote programming of radios, etc., but in general I think of the control data channel as a sort of data traffic cop that's always transmitting information. The trunking scanners that have recently hit the market also "listen" to this control channel and decipher what frequency in the trunked system they're to hop to in order to follow a conversation.

Toilet Boy, you're still a liar and a fraud.

1. It was proven you lied about the first date of your appearance on the Internet.

2. It was proven you lied when you denied making the claim about patronizing under age child prostitutes.

3. It was proven you lied when you claimed to have written "several technical articles" for the ARRL and other technical publications.

4. It was proven you lied when you claimed to have adopted your dead sister's children.

5. It was proven you lied when in the span of two weeks you claim to be married in one forum and single in another.

6. It was proven you lied about having college degrees.

7. It was proven you lied when you denied you were identified as a known Internet abuser by Joe Greco on his published lists of spammers and idiots.

8. It was proven you lied when you claimed you weren't stealing Internet access and your employer terminated you for theft of services.

9. It was proven you lied you claimed you've never used fictitious or illegal Internet address.

10. It was proven you lied when you claimed you were not the most prolific poster of off topic messages.

11. It was proven you lied when you said WD-40 was unsuitable for electronic use by posting another endorsement from Roy Lewallen, w7el@teleport.com, which you ignored.

12. It was proven you lied about your place of employment when others
posted your work telephone and related data. It was also proved that
you worked at that office and not your retired father.

13. It was proven you lied when you claimed that Bill Cheek had never
been a member of Mensa.

14. It was proven that you lied when you claimed
to have never lost an ISP for your forged cancels.

15. It was proven that you lied when you denied
using numerous fake identities on the Internet.

16. It was proven that you lied when you denied
you've never blown up a repeater system through your incompetence
and total lack of technical expertise.

17. It was proven that you lied when you denied
trying to break into other computer systems using Back Orifice.

18. It was proven that you lied when you claimed
you had "acquired MORE FCC licenses ... than could be counted
on one hand!"

19. It was proven that you lied when you claimed
you have made your "living from the Radio Communications Field
for most of the last 15 years."

20. It was proven that you lied when you denied
having stalked Bill Cheek for over three years.

21. It was proven that you lied when you denied
being kicked off Fidonet by Bill Cheek.

22. It was proven that you lied when you claimed
Bill Cheek had been kicked off of Fidonet.

23. It was proven that you lied when you claimed
a police had been filed supposedly about harassing phone calls
made to you at your place of work.

24. It was proven that you've emailed death threats
to your detractors on the Internet.

25. It was proven that you lied when you claimed to
"have helped resolve" the problems of the scanner newsgroups
and have "rid this NG of trouble makers."

26. It was proven that you lied when you denied
sending bogus complaints using aliases to the Internet providers
of your detractors.

27. It was proven you lied when youï¿½ve made hundreds of rouge
cancels over the course of the last several years

28. It was proven you lied when denied stalking Bill Cheek since his death

Once again you have done nothing but proven yourself to be a liar, Mr.
Wirehead.

Mr. WireHead <wirehead@pacbell.net> wrote
> 1. It was proven you lied about the first date of your appearance on the
Internet.

I did not lie about this issue. Present your verifiable proof of my lie
within 24 hours or
be found to be lying yourself.

> 2. It was proven you lied when you denied making the claim about
> patronizing under age child prostitutes.

I have never patronized any prostitute. Present your verifiable proof
within 24 hours or
be found to be lying yourself.

> 3. It was proven you lied when you claimed to have written "several
> technical articles" for the ARRL and other technical publications.

WRONG! Present your verifiable proof within 24 hours or
be found to be lying yourself.

> 4. It was proven you lied when you claimed to have adopted your dead
> sister's children.

My only sister is still living & has never had children. Present your
verifiable proof
within 24 hours or be found to be lying yourself.

> 5. It was proven you lied when in the span of two weeks you claim to
> be married in one forum and single in another.

Present your verifiable proof within 24 hours or
be found to be lying yourself.

> 6. It was proven you lied about having college degrees.

The above is not true. Present your verifiable proof within 24 hours or
be found to be lying yourself.

> 7. It was proven you lied when you denied you were identified as a
> known Internet abuser by Joe Greco on his published lists of spammers and
idiots.

The above is not true. Present your verifiable proof within 24 hours or
be found to be lying yourself.

> 8. It was proven you lied when you claimed you weren't stealing
> Internet access and your employer terminated you for theft of services.

The above never happened. Present your verifiable proof within 24 hours or
be found to be lying yourself.

> 9. It was proven you lied you claimed you've never used fictitious
> or illegal Internet address.

I have never used any fake addresses. Present your verifiable proof within
24 hours or
be found to be lying yourself.

> 10. It was proven you lied when you claimed you were not the most
> prolific poster of off topic messages.

Present your verifiable proof of the above within 24 hours or be found to be
lying yourself.

> 11. It was proven you lied when you said WD-40 was unsuitable for
> electronic use by posting another endorsement from Roy Lewallen,
> w7el@teleport.com, which you ignored.

I stand by my statement. Present verifiable proof from a reputable
source within 24 hours, of be found to be lying.

> 12. It was proven you lied about your place of employment when others
> posted your work telephone and related data. It was also proved that
> *you* worked at that office and not your retired father.

Present your verifiable proof of your accusation above within 24 hours or
be found to be lying yourself.

> 13. It was proven you lied when you claimed that Bill Cheek had never
> been a member of Mensa.

Present your verifiable proof of your accusation above within 24 hours or
be found to be lying yourself.

> 14. It was proven that you lied when you claimed
> to have never lost an ISP for your forged cancels.

I have never forged & have never involuntarily lost an ISP.
Present your verifiable proof of your accusation above within 24 hours or
be found to be lying yourself.

> 15. It was proven that you lied when you denied
> using numerous fake identities on the Internet.

I have never used a fake ID. Present your verifiable proof of your
accusation
above within 24 hours or be found to be lying yourself.

> 16. It was proven that you lied when you denied
> you've never blown up a repeater system through your incompetence
> and total lack of technical expertise.

I have never "blown up a repeater". Present your verifiable proof of your accusation above within 24 hours or be found to be lying yourself.

> 17. It was proven that you lied when you denied
> trying to break into other computer systems using Back Orifice.

I have never committed an act as above. Present your verifiable proof of your
accusation above within 24 hours or be found to be lying yourself.

> 18. It was proven that you lied when you claimed
> you had "acquired MORE FCC licenses ... than could be counted
> on one hand!"

Present your verifiable proof of your accusation above within 24 hours or be found to be lying yourself.

> 19. It was proven that you lied when you claimed
> you have made your "living from the Radio Communications Field
> for most of the last 15 years."

Present your verifiable proof of your accusation above within 24 hours or be found to be lying yourself.

> 20. It was proven that you lied when you denied
> having stalked Bill Cheek for over three years.

Present your verifiable proof of your accusation above within 24 hours or be found to be lying yourself.

> 21. It was proven that you lied when you denied
> being kicked off Fidonet by Bill Cheek.

I was never kicked off of Fidonet by anyone. Present your verifiable proof of
your accusation above within 24 hours or be found to be lying yourself.

> 22. It was proven that you lied when you claimed
> Bill Cheek had been kicked off of Fidonet.

I never claimed that he had been kicked off of Fidonet. I did state that he had been asked to leave. Present your verifiable proof of your accusation above within 24 hours or be found to be lying yourself.

> 23. It was proven that you lied when you claimed
> a police had been filed supposedly about harassing phone calls
> made to you at your place of work.

Your statement "a police had been filed" does not make any sense.
Care to try your feeble attempt again?

> 24. It was proven that you've emailed death threats to your detractors on the Internet.

I've never given death threats to anyone. Present your verifiable proof of your

accusation above within 24 hours or be found to be lying yourself.

> 25. It was proven that you lied when you claimed to
> "have helped resolve" the problems of the scanner newsgroups
> and have "rid this NG of trouble makers."

I did INDEED help resolve this NG of trouble makers. Present your verifiable
proof of your accusation above within 24 hours or be found to be lying yourself.

> 26. It was proven that you lied when you denied
> sending bogus complaints using aliases to the Internet providers of your detractors.

I have never sent "bogus complaints". Present your verifiable proof of your accusation above within 24 hours or be found to be lying yourself.

> 27. It was proven you lied when you've made hundreds of rouge
> cancels over the course of the last several years

I have never made a rogue cancel. Present your verifiable proof of your accusation above within 24 hours or be found to be lying yourself.

> 28. It was proven you lied when denied stalking Bill Cheek since his death

I never did the action above. Present your verifiable proof of your accusation
above within 24 hours or be found to be lying yourself.

Wow. Well it sure sounds like somebody's got it
worse then me. Sorry to hear that. Unfortunately
Class-Action lawsuits may be the only way to go.
Even then there's no guarantee that anybody
will be able to make the system work. It's kinda
interesting that everywhere they bring in digital
there seem to be similar problems. Kinda makes
me want ot ask, well what was so bad about
analogue in the first place?

Then it hits me; well with digital you can be charged
for cable TV, and for digital telephone, AND for internet.
All from the same set of lines. Pretty profitable, Hhmmm?
Can't triple bill analogue it seems.

As to your C,C&R's (Covenents, Conventions, and
Restrictions) they are just about the only thing around
me that I hate more than the cable company. There is
* some * hope. The ARRL has been pressing the FCC
to make allowances for Hams because of the public
service, etc. that they do.

Of course everybody knows that really the Hams
want to put up their dipoles and chase DX on the 20M
band -- but there were several documented cases where
Hams provided the only comms in Fla.in some areas when
hurricaine Andrew hit. Everybody thought they could use
their cell-phones, but guess what? If the cell-towers are
knocked down than no more cell calls! Those cell phones
can't even throw a signal out as far as your Aunt Nancy's
walking stick. So maybe there's some hope there. I would
consider getting my General class license asap so
you could be "grandfathered in" if the legislation came
out that way. Who knows.

andrew

Don't forget 900MHz *digital* , now also on 1.2GHz with
spread spectrum at your local Target for 199.00 for top-of-the-line
"base stations". Say, where have I heard that term before?

Actually, 43-49MHz. is surprisingly quiet in my area. I think
that everybody would rather just get a cell-phone and yak it up
that way. My wife has a cell-phone, I do not. I don't need it for my
job and as regards personal use, I consider even the digital ones
to be neither secure nor safe.

I am not that thrilled with it.

Keeps telling me I've got monitor problems. Right...lack of memory it
says. right? 30 gig drive/378 ram and i get this reading.

anyone know how to reset the 2067. the manual does
not mention it. but then it does not do a very good job of explaining
program to the scanner to use.

so....how does a nice guy learn from the ones who know more how to RESET
the full set and start again.

the software...well, will start that over again just to be
sure.

etc. guy

Project 25 is the digital version of scanning people are working on.
See:
http://www.strongsignals.net
they talk about it in Chat room and other place.

bc250...still got mine. righteous when in its time. very nice unit for
analog ... did great on the 150 and 460's and then great on the 488's.

a very popular set.

where or what box did i put that bugger in? along with all my old regencies
and other bcats. may sell them some day.

hint

etc.

Many people have found that the software from www.pro92.com does not
work. In addition, part of what you buy is taken from a package
distributed free of charge as "Careware".

Check the reports on software for the PRO-92 at

www.pro-92.com.

Note the dash between pro and 92. It makes a BIG difference in
getting you to the right site.

How legal is it for them to prohibit you from smoking on duty?

Company rules can prohibit you from even listening to AM radio, if they so
choose.

OFF duty is another question entirely.

On how they can use it, if it's low power, police are authorized to use any
frequency normally assigned to police (and others, too, under some
conditions) at low power, unlicensed. This was for bugs, and yes, 'secret'
surveillance channels, and as far as I know, is still valid. Of course, if
they're using it at higher power, it might in fact be illegal use. Not like
police haven't been caught breaking the law, especially the FCC regulations,
before.

As was said elsewhere, an employer can place limits on activities of the employees while the employee is working, or off work when the employee is readily identifiable (for instance, you can go to a bar and have a beer when offduty, but you can't do so while still in uniform). Other than that, as long as your activities are legal, what you do in private is your own business. Remember, employers have fairly broad power to restrict the activity of employees while they are working. For instance, my company forbids any radios, cell phones, etc., while employees are out in the production area. As a local EMA/Skywarn/ARES volunteer, I have specific permission to monitor/use my ham HT on the floor, during SEVERE WEATHER ONLY! At all other times, I have to abide by the same rules as anybody else. I have no doubt that your bosses are within their rights restricting your activities while you are on the job. When I worked for the local PD back in the '70's, we installed some CB radios in the sergeant's and LT's cars, as well as in dispatch. But we were under strict orders to keep the CBs on Ch. 9 at all times.

As to using an unlicensed frequency. The FCC grants permission for law enforcement to use any frequency subject to two rules: First, that they don't cause any interference to licensed users, and Second, that they operate at low power (two watts or less). Having the unlicensed freqs in a mobile radio which is probably operating at 40 watts or better is a no-no. They could get around this by having that frequency programmed at low power, which can be done with the newer radio. My local PD uses a splinter frequency which is only programmed into their HTs.

Project 25, also known as APCO 25, is the APCO Project 25, which is a standard for the implementation of digital modulation (not to be confused with digital encryption) in law enforcement communications. By having a single standard for all radio manufacturers, interoperability of all radios is assured. APCO stands for Association of Police Communications Officials or Officers, I believe.

I work for a municipal police department that has a certain frequency programmed in as the last one on all the car radios. It is FM mode, in the 43MHz area, nonencrypted, not sure if it utilizes a PL tone.
This freq is usually only used during investigations for car-to-car chat when privacy is an issue (i.e. detectives, etc.)
The powers that be are telling everyone that it is prohibited to monitor this frequency while on duty from anywhere except while on patrol in a car using that frequency. Period.
Now, mind you, I did an FCC search on the 'net and *NOBODY* in my state (MA) is even licensed to that freq, let alone the fact that it is supposed to be for industrial itinerant use.
Myself and several others know the freq and can monitor it using our scanners. But we have been told that to do so while on duty, inside the station is absolutely a "no-no."
How legal is it for the department to have this policy? I don't think it is terribly reasonable to ask that of the personnel, let alone possibly infringing upon our rights to monitor. Any laws that can be cited to prove/disprove any of these points?
Thanks to all...

Sad state of affairs! Doesn't appear to be any happy customers. A detailed problem description and step-by-step procedures to recreate data/memory corruption with a copy of my corrupted channel file was sent to Pozilla support. Will post any Pozilla reply/"fix" if received.

Agree the scanner market is "relatively small". Won't grow either until product review sites provide up to date and long term testing information. The 2052 works stand-alone but had hoped for PC control as well. Guess not.

Does anyone have any idea wha the differences are between the PRO-92 and the forthcoming PRO-93?

The 93 seems to be a watered version of the 92. It doesn't seem to have CTCSS capability and won't track LTR trunk systems. I'd also hoped the 93 would have improved on some of the 92's shortcomings but it seems they still don't get it.

>conditions) at low power, unlicensed.

As a minor technical point, the use of these frequencies is not
unlicensed, rather they fall under the primary station license
(for law enforcememnt agencies only). Power is limited to one watt,
generally. And there are certain blocks of frequencies within the
bands assigned for low power surveillance equipment. These vary with
local, state and federal government. State and local typically are in
the 155 megacycle region, for VHF. I don't know about low band.

These frequencies are not licensed separately, and the equipment can
be frequency agile. If there were licensing, as Skip pointed out, few
agencies would bother, and the local Radio Shack would be stocking
crystals for that frequency before the equipment was received from the
vendor.

I could provide a cite on this if necessary, but I am at home and all
that info is at work.

And, speaking as a former deputy chief of police, of course the agency
can control what you do on duty, and occasionally off duty if your
activity might cause liability to fall on your agency. You agreed to
that when you were sworn in. They may not be legally correct in using
the frequency, but they can prohibit you from listening or even
possessing a scanner in your unit, the same way they can dictate the
length of sideburns, facial hair, what weapons you carry, etc. Things
may have changed over the years some. Maybe now the agencies aren't
allowed to prohibit you from getting a sex change.

Sadly, employers are now also trying to govern what an employee does on his own
time.

The city of Temple Terrace, Florida recently announced that it's employees
could not smoke...either on or OFF duty!

Hopefully, this will be challenged in court.

This is a department policy and is not a "law". Violate the department policy and you are subject to finding yourself listening to this frequency all you want to......from another job.

> Now, mind you, I did an FCC search on the 'net and *NOBODY* in my state (MA)
> is even licensed to that freq, let alone the fact that it is supposed to be

There are certain exceptions for low power applications that public safety organizations can operate unlicensed. If you feel your department is wrong, bring it to the attention of the Federal Communications Commission. Don't be surprised though, if your department might have no further use for your services in the future or at best, conditions will become such that you will leave.

> Myself and several others know the freq and can monitor it using our

No problem at all. That is all it is. A policy. They cannot put you in jail or fine you, but a policy is the same as a standing order. Disobey that order and you are guilty of insubordination and subject to termination. Obviously, this policy is not binding on non-employees. As I said above, continue to monitor that channel and you may find yourself monitoring it from another job.

> terribly reasonable to ask that of the personnel, let alone possibly
> infringing upon our rights to monitor. Any laws that can be cited to
> prove/disprove any of these points?
> Thanks to all...

I don't recall anyone having any "rights" to monitor. I don't see scanning or monitoring radio transmissions mentioned anywhere int he Constitution or the Bill of Rights.

Plenty of people have imported un-blocked Scanners from across the pond and from our Northern Neighbors.

Things to ponder before you order:
1- If Customs nails it at the border, you may loose more than just the cost of the Scanner, there can be fines.

2- Some firms abroad have a no return policy when sent to the US, so be sure you are sure of the Scanner you order.

3-The advantage of being able to monitor Cellular may fade faster than the bill for the added feature.

People import lots of illegal stuff every day, from drugs to guns and pull it off; but as the Customs says: A Career smuggler has to be lucky every time, where the Customs only has to get lucky once.

>Bill of Rights.
>

I'm 100% with you except on the above. Technically you are correct, there
is no "right" to monitor. But then again there is no "right" to privacy either.
What there is is the 1st Amend. granting freedom of speech and the 4th Amend.
protecting againest unreasonable search and seizure.

Supporters of public encryption such as PGP and those who want to push for
the maximum in Internet Anonimity (Anonymous Remailers and such) are quick to
cite the above as a reason for freedom from such things as; giving the NSA keys
to all encryption methods, or allowing individual users more say-so in how their
web-surfing is tracked. I'm all in favor of that. I believe reasonable privacy
is implied by the 4th Amend.

However, there is a flip side to the coin as well. If your communications
are such that any accidental ability or modest equipment is sufficient to
intercept such comms you have NO right to expect those same comms.
will remain private. In other words; it is and ought to be illegal for me to
wiretap your house without a court order. But if you chose to conduct
business in a public park there is nothing to prevent me from pulling up a
chair and listening whether you like it or not. Similarly, if AF-1 is doing a
secure, encrypted, satellite down-link of today's nuclear "Go - Codes" --
well, even if you could poke into that, you'd be in Leavenworth quicker
than a greased monkey. But if I go on air as KG4JBM to call " CQ" on 10M--
then listen in all you like.

That's my understanding - correct me if you think I'm wrong.

Scanners for sale.

Many of these would make good backup scanners - get one for car,
truck, and/ or garage.

All have antennas.

Price includes shipping CONUS.

Money order or Paypal.

Handhelds

BC55XLT 10ch. $25
BC200XLT 200 ch $150 Copy of manual Mods done
Pro31 10ch $30
Pro44 50ch $60
Pro62 200ch $75 Triple conv, box, manual
Pro70 50ch $60 MINT in the box -all there -
unused
Pro71 100ch $70 Manual

Base

BC155XL 16ch $25 WX
BX178XLT 100ch $65 In the box - all there - nice
scanner - WX
SR900 16ch $30 Cobra - WX
SR900 16ch $30 Cobra - WX
Pro2014 50ch $50 Replacement AC adapter
Pro2036 200ch $100 Nice radio, manual
Pro2021 200ch $65 Manual
pro2021 200ch $65

Mobile

Pro2056 50ch $65 MINT in the box all there -
unused

Legends - "as is" - for parts or collecting, I think some work

BC210 $75 6 radios, including shipping,
service manual
BC250 $45 3 radios, including shipping,
service manual
BC160 $25 Unique radio for collection -
seems to work
BC145 $10 Bag of parts - includes AC

adapter.

I don't know what you laughing at they are a good scanner, equal to most
of the new gear

there are a few mods for this radio
namely and extra 100 channels,
30KHz steps in the 800MHz band
faster scan speed,
discriminator tap,
most done by just cutting a few diodes(not surface mounts)

got to www.mods.dk and check it out there

First let me say that for the most part, listening to cell calls
(should anyone - not me - choose to do it) is usually about as
exciting as watching grass grow. On average only 30/40
seconds of a call can be heard before the channel switches,
and -I'm told- what you will hear is mostly women ragging about
their husbands and boyfriends, and teenage girls babbling
about nothing coherent.

I do, however, understand your desire to have the ability to
receive such transmissions, even though you may quickly loose
interest. Our legislators in the US love to deal with "illegal
behavior" by taking removing a liberty rather then trusting us.
I feel there is something fundamentally un-american about that.

Also, don't get me started on those hideous low-flow
toilets again!

You forgot to mention it's usually about as exciting as watching paint dry, also! And if you do hit something interesting, it switches, then you have to toggle through 145 channels to try and catch it before it changes again..... Cordless are much more fun, you usually have some idea who is actually talking, and it stays put..... Importing is nothing - But, I hear the hot spot is stuff coming across from Canada through Chicago.

I wasn't laughing at the 2004, I actually own one.

What I was laughing at is somebody that is willing to wait for a
response that might never come instead of typing a few words into a
search engine. That might be why I offered two search engines to help
the poor lost lad out. Dogpile rocks.

In article <3B704DDB.D4E9CFCD@ozwebip.Spam.com.au>,

Hello,

I want to buy a handheld scanner to listen to Air Traffic Control. I have no idea which one to buy. I am not looking for a fancy one, just one that will get the job done with a good signal, a good all-around performer. Are there reviews on the web? Any personal recommendations? I've only seen two major brands out there, being Radio Shack and Uniden. Why not more competition?

Also, would you buy it from online auction places like ebay?

Thanks a bunch.
Alex

Any REGULATED external power supply will work fine as long as it
provides enough current. Look at your manual for the 2006 (I am too
lazy to dig mine out) but if I remember right, it needs a bit more
than 500 ma. Apx 1 amp, I believe.

As to 12 v 13.8, as previous person noted, 13.8 is actual car battery
voltage but 12 will work fine.

What no one else mentioned is that by using an external supply, you
prolong the life of the radio because there is no buildup of heat from
the power transformer. I have used external power and my 2006 works
fine after more than 12 years of use.

3062. Scanners lacking in 800MHz Sensitivity: Improvement possible ??

Newsgroup: rec.radio.scanner
Date: 2001-08-08 15:26:25 UTC
From: leadenwah@aol.com
Message-ID: <20010808112625.16171.00000500@ng-fd1.aol.com>
Source record: 61675

I am having very good luck with our local Motorola public safety trunking systems.
I do, however, find that some scanners seem less sensitive than others, but that all, so far (BC 895XLT, PRO-2066, PRO-2067) that I've used are generally low in sensitivity.

Have others observed this problem? I doubt that the sensitivity in the 800-900MHz band can be tweaked or modified on any of them, but if anyone knows of a way or of anyone who can do this, I'd like to know.

Thanks,

Geo.

I have always seen the Cell/Cordless Monitoring as more than a legal issue, it is something that goes beyond that; more of a Moral and Hobby Destruction thing.

When the News gets a story about someone who leaks information overheard on a Scanner it seems as though those who never owned a Scanner says: How can that be, lets make a law, require permits, ban them, and so on.

Granted there will always be a way to do whatever you want regardless of laws in place to "prevent" or otherwise steer most away from it.. be it killing, fraud, or building a Nuke in the basement... but some will do it regardless.

I just hope that if someone does use a Imported or Modified Scanner to work the Cordless or Cellular Service Bands that they keep it to themself, all we need is more regulations or an eventual ban of Scanners... as some say is the case with guns after a tragic incident.

I once read "They can have my Scanner when they pry it from my cold dead fingers"

I hope it never comes to that !

How far do you live from the airport? With a handheld scanner your range will be limited. For all practical purposes, either the Uniden or Radio Shack will work fine. If you live close to the airport you should get by fine with the rubber duck, but an outside antenna like a small groundplane will help alot. You can get one of those radio shack groundplane antennas. The small one with 3 radials and a vertical element about 18" long. That will work very well for you. bob

>low in sensitivity.

800 mhz systems are generally "line of sight" .... if you live in a "hilly" area the
signals will not be as strong as VHF or UHF. I have a pro 2066 installed in my car, and am able to follow trunked systems
25 miles away, using the car antenna ... but where I live its real flat.

The radios themselves are a compromise, having to tune from 30 Mhz to 900 mhz is a pretty big spread.

try using an outside antenna (as high as possible) and short runs of coax.

Note: you will pay a premium for that un-blocked scanner
from them. They figured out the US types were willing to pay lots
more than the going price in the US for these so they charge what
the traffic will bear. Depending on the brand you might look into
Bandercom, Finland, who also sells un-blocked scanners to US folks.

3073. Re: Scanners lacking in 800MHz Sensitivity: Improvement possible ??

Newsgroup: rec.radio.scanner
Date: 2001-08-08 21:31:48 UTC
From: Walt Bertram <wbertram@worldnet.att.net>
Message-ID: <3B71AFC2.71EB0621@worldnet.att.net>
Source record: 61686

Basically, the receivers all have the same sensitivity over the
frequency ranges up to 800 MHz. The PRO-92, for example, has a
specified sensitivity of 0.7 microVolts in the 800-960 MHz band, vs.
0.5 microVolt in the 137-174 MHz band. A loss in sensitivity of 3 dB.

The real culprit has to do with an effect summarized in the literature
as the Friis Transmission Formula (run an Internet search on this).
Basically, an antenna, any antenna, has what is called an "aperture".
The aperture is the effective area of the antenna which intercepts the
transmitted power. If the antenna were a horn antenna, the aperture
would be the open area of the horn. The aperture of a dipole type
antenna is approximately (wavelength)^2/4*Pi. I.e., the aperture is
proportional to the square of the wavelength, or the inverse aquare of
the frequency. Plugging in 850MHz and 150MHz, for example, we see
that a 150MHz dipole has 32 times the aperture of an 850MHz dipole.
Or, you will receive 15 dB more power at 150 MHz than at 850MHz for
the same transmitted power. The transmitting antennas are usually
peaked to maximum gain, which is roughly independent of frequency, and
detemined by mechanical tolernces, etc.

For the PRO-92, for example, this means that the receiver will be 18
dB (3 + 15) more sensitive at 150MHz than at 850MHz. And, there is
very little the receiver manufacturers can do about it!

Of course, since most VHF/UHF transmissions are "line-of-sight", it is
usually your line-of-sight range rather than your sensitivity which
determines whether you will recerive a given transmission. But, put
your receiver in a car, or in the basement of a mall, and one may very
well be better off with a 150MHz systen than with an 850MHz system.
Something which many fire/public safety departments are wrestling with
right now.

Walt

Another place to try is Javiation in the UK. Owner Jonathan was
willing to sell me a perfectly new AR8200MKII for 350 pounds. At
that time about 500.00US and 59.00US cheaper than Radioworld.ca.
You can read reviews of these merchants at www.strongsignals.net

Source record: 61689

True. Free Space Path Loss quadruples when you double the frequency (everything else being equal). So an 800 MHz signal has 6 dB more path loss than one at 400 MHz. That's not even taking into account additional attenuation due to foliage, etc. which tends to be worse at 800 MHz. Add to that the fact that your transmission line is much more lossy at 800 MHz.

Of course, everything else is not always equal. The good news is it's easier to get antenna gain at 800 MHz due to the shorter wavelength. If you increase the gain of the transmit and receive antennas by 3 dB each, you get that 6 dB back. But most scanner listeners aren't using an antenna designed specifically for 800 MHz.

Best thing you can do is use good coax and get the antenna as high as possible. The next step would be to try a directional gain antenna. You can easily modify a UHF TV antenna (corner reflector type) for vertical polarization. Maybe even add a low noise preamp up at the antenna. That will do a pretty good job at 800 MHz.

Art Harris, N2AH

I'm using an average hand held w/o trunking, works fine for my small town and surrounding counties.
now for the question, The largest "city" near me is 25 miles away (chattanooga, tn) They use trunking, should i be able to hear them ok from this far out? I have no idea what the average distance scanners have on police/emergency bands, i'm new to all this. thanks in advance for any help.

If Art Bell says its good, then it must be.

Sorry i really dont know much about them other than they are suppose to be
good,
Many people buy them, they are ALways on "back order" from C Crane Company

3081. Are 900 mhz cordless, Blocked ?

Newsgroup: rec.radio.scanner
Date: 2001-08-09 00:16:58 UTC
From: gamehendgegnome@aol.com
Message-ID: <20010808201658.19287.00003459@ng-fn1.aol.com>
Source record: 61694

are the 900 mhz cordless phones blocked from scanners that reach 965 mhz.?
or are there other scrambling devices on the average 900mhz phone?
in other words with a scanner like a Bearcat 895XLT should you be able to hear
a 900mhz cordless just as well as a 43-49mhz cordless?

3082. Winscan 780 Radio>PC

Newsgroup: rec.radio.scanner

I can't transfer frequencies from the 780 to Winscan. I am going through a switchbox since I have other devices connected to the same Comm port. I changed the settings in the BIOS for this Comm port with no luck. I've left a message with Pozilla Tech Support but from some other messages here that looks like a long shot. Any help is appreciated.

Thanks,
Dan

True. But I don't think that firefighter trying to get help in the basement of a burning, collapsing, building really wants to worry about having to carry around, and set up, in the proper direction, and then extend it on a 100' mast, a high-gain antenna. Monitoring base stations is one thing; using handhelds in a real life, life or death, situation, is another thing.

I believe only the cell phone frequencies are blocked. It is still
illegal to monitor ANY phone transmissions; cell, cordless, whatever.

900 meg phones are scannable if they are not digitial and/or spread spectrum transmissions. You will find that 900 meg phones will be scannable from farther distances than the old freq phones.

Interesting you mention this, since it was the reason behind the
question. I have seen this same statement elsewhere, on the web IIRC.

I've had someone else tell me that they run theirs off regular wall
current, that the scanner is on 24x7 and he has no problems. Not to
change the subject in the middle, but would anyone else care to
comment on this? I've run mine off wall current, and the case does
get warm, but not what I'd call objectionably so--at least not to the
point I'd worry a lot about heat buildup. However, given what a 2006
still costs, and that I can do some interesting things with it that
are difficult to impossible with newer scanners, I'm loathe to do
anything to lessen its life.

Or am I worrying about silly stuff?

I would have to agree that open and boastful postings which brag about illegal monitoring only bring further and unjustified regulation.

Motorla began selling digital encryption to law enforcement agencies with illustrated ads showing several seedy criminal types hovered around on of the early model Bearcat programmable scanners. They unfairly, but very effectively tied scanner use to the images of thugs, bums and criminals.

Irresponsible postings about monitoring cell phones and other restricted signals will only serveto advance that image.

Geo.

We bought this Trident TR-2400 1000ch wide range monitor / scanner new in 1994 for $499 before the final cell frequency ban. Scans 100khz-2060mhz. Same type /
manufacturer of unit as sold under different names (Camnis , AOR , Fairmate). Low use, clean and very nice condition (never dropped). This was one of the last units with no cell block (scans clean through 800-900mhz). See below for pics and specs. With original box, unused NIMH batteries, car adapter, AC adapter and manual. $220 + shipping.

See picture of our unit here:

http://www.hifitown.com/trident_tr2400.jpg

Walt & Early ** + Shipping - For USA: Prepay by United States Postal Money Order (available only at Post Office). Overseas ok.

Source record: 61606

<snip>
>Thanks for any assistance you can provide.

I have used WinScan and TrunkStar with the BC780XLT. I have found that TrunkStar does an excellent job of handling frequency databases and it is fairly intuitive with a low learning curve. Setting up a trunking system is a breeze and manipulating multiple profiles for your scanner is easily done. Cutting and pasting entire banks to allow you to logically set your scanner up is easily done. Entering alpha tags, PL codes, and other such data is painless. If you care to use the radio control interface it allows easy switching of scan modes and search modes.

WinScan seemed cumbersome to me, and more troubling was its tendency to corrupt data in my 780. The only sure way to clean up after it was to completely reset the memory in the 780 (power up while holding keys man, 2, and 9). Data entry for me was quite a bit slower using their interface. The radio control interface is much slicker looking than TrunkStar in my opinion (it looks just like the 780), but I didn't find it to be as usefully laid out as TrunkStar. Many people use it without any problems and I have seen more trading of user made databases with WinScan than with TrunkStar.

I personally prefer TrunkStar, but that's my opinion. You will find many supporters of both pieces of software so it's up to you to decide.

Enjoy the radio, it is really a fine one! You might want to browse the BC780XLT user group at the address below to see what has been discussed regarding software control of this radio.

Yes, according to Arty, everything they sell is "built like a tank"
and almost out of stock.

Seriously, I have played with a CC Radio. It is feature-rich and
works very well, but at $160 I think it's a real stretch.

If you really need a good AM radio, just get a GE Super III. I think
they can be had for around $40 or so. As always, shop around!

>Geo.

About the best you can do in a practical sense (without carting
around some kind of external amp, or modding the scanner), is to just
replace the stock "duckie" antenna with something like a Watson Super
Gainer W-88 or a Diamond RH77xx type (which I use).

If you don't mind a telescoping whip, the Radio Shack 20-006 (which
I use on another radio) is a good performer for only ten bucks.

except in canada it is not illegal. you can listen to it here. but as the other posts. if it is DSS you will not receive it yet on a scanner. maybe in the future. we can all hope.

It is a common problem, but unfortunately the electroluminecent panels
are not available from Radio Shack . I had a URL for a replacement
article, but it isn't there now 404 error. I'll see what I can find, I
have a PRO-2021 with the same problem, but I've just been ignoring it.
I use it for the local public safety channels so I don't really need
to look at the display very often.

I am in need or should I say my 81 yr old father is in need of a diagram for
a
AWIW Model TPR-930 MW-SW1-SW2-FM with casette player.
It is a 3 way operation AC-DC- 12volt car.

He took it apart to fix the cassette and some (too many) wires broke off
the mainboard. I have called AWIW and no luck ! Any ideas.....

Tnx in advance
Jonathan

Thanks Mike

I didn't realise RS used electroluminecent panels for the back light. I'll try Tandy spare parts here in Australia and see if they have spare ELs.

3106. Scanner sites

Newsgroup: rec.radio.scanner
Date: 2001-08-09 11:42:16 UTC
From: Ryan KC8PMX <kc8pmx@tm.net>
Message-ID: <sGuc7.3296$5d4.942667@monger.newsread.com>
Source record: 61620
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I was wondering if there are any really good sites that index scanners by specifications and also (a major must) pictures of each scanner. This would be helpful when considering buying used scanners, especially when people don't bother to give much information other than model number and price.

Any suggestions???

Yep, might be, if a person is stupid enough to divulge the fact that they have an "unblocked" scanner. Or the content of the information also. Smart money says "Listen, but keep your mouth shut about it."

If I had one, you could bet money on the fact I am not going to be telling anybody about it. In fact, within a few exceptions, most of everything you hear on a scanner is illegal to repeat or reveal of the content. (Believe ham freqs. are one of the exceptions.)

From: Ryan KC8PMX <kc8pmx@tm.net>
Message-ID: <uGuc7.3298$5d4.942683@monger.newsread.com>
Source record: 61621

You probably should. 800Mhz is line-of-sight propagation, and also long as their antennas are high enough you should be able to hear them. I can hear VERY WELL (59 copy) Saginaw, MI's 800Mhz trunked system, and I am in the Midland, MI area which is about 30 miles away. I can get Flint, MI and Lansing, MI systems in also, which are about 45-60 miles away "as the crow flies."

If you are looking at a new scanner of some sort, I would purchase one from a retailer that has a decent customer oriented return or exchange policy. I have been burned by Radio Sham (Jap Shack) i.e. Radio Shack, because if the amount of purchase is over a certain amount ($100.00) they will not refund your money in cash if you paid with cash. If you paid by check I could understand this policy, and a credit card could just be immediately credited. This way, by choosing the right retailer, you could experiment a little till you find the one you like! Good luck and good scanning!

A friend and I bought our Pro2004s at the same time. A long time ago.
The first night I had mine we had an ice storm that knocked the AC off
for 3 days. I ran mine from the ham shack 12 back up battery.
Since my ham shack was powered by a GE 16A 12V (13.67 to float charge a gell
cell), and since I already had it connected to the DC power I never ran mine
from AC(except for the first afternoon at work). After warrenty expired, I
pulled the pwer transformer to make from for a COR and a crude PC to scanner
interface (something like programit but much cruder!).
My unit is still running. With no problems.
My friend ran his from AC and after about 10 years we had to change out
(replace) most of the elctrolytics. They had dried out from the heat.
Replaced them, it worked fine, so my friend now runs his from a regulated 12V

(about 14.1) wall wart and has had no more problems.
Mine has been on 24/7 for almost the entire time.
I am convinced that running the Pro2004/5/6 from an external +12V is the best way to go.
YMWV

If one of the devices is a Palm PDA and the HotSync program is loaded it will keep other programs from using that serial port.

Generally changing the settings in the BIOS is only needed for situations when the application can not change them internal to itself. Winscan can modify the serial port configuration. It could be that you are changing the configuration to what is needed in the BIOS but when you start WinScan it resets to a default different than your scanner. As I recall the default for the scanner is the same as the program.

Serial port communications can be frustrating. Got to get the cable wiring correct. Got to get the baud rate, # of data bits, parity type correct for the devices at both ends. Any one item will keep it from working and in situations where there are multiple problems you fix one and don't know it because it still does not work because of the other problem.

Good Luck
mike

Yeah, Art always talks it up and I have friends who do likewise.It's real competitors are the GE Super Radio series and the Radio Shack DX 39x series (where x = 2, or whatever). The Radio Shack radios are actually made by Sangean and are identical to the Sangean with exception of cosmetics.

A point to keep in mind IMHO is receptivity. Almost all AM portable radios use the samer internal bar antenna. In some the wire is coiled around a plastic tube, in others a ferrite core. The radio's receptivity will have as much or more to do with its antenna than just about anything else. So when Art tells you to , " listen to it really pull them out ." --or whatever he says, unless he is clearly implying *selectivity* vs. *receptivity* he's selling you hogwash and as a Ham he oughta be ashamed.

I chose the RS DX-392 because it was on sale as discontinued (now it's the DX-398, I think), it had better SW coverage, AND because it had a jack for an external antenna that meant I could hook whatever into it. By the way, even the RS 23ft. reel antenna thrown up over a tree limb made a HUGE difference over the whip on SW. If this sort of thing appeals to you you'll need to do a lot of prowling around as stock can differ markedly between one RS and the next. Keep your eyes open for Sangeans in electronic stores as well.

The GE Super Radio I only know of what I've read here and elsewhere which is that it's an excellent AM radio for a much better price than the C Crane. If Art is all you want, go with GE.

I've never heard anybody fault the C. Crane for performance or workmanship, just it's exorbitant price. I think they must depend on Art's "hard sell" to keep the price up. He sure oughta be getting a 20% slice on each unit sold. <grin>. You pays your money, you takes your choices !

Hope this helps,

Andrew

Great site for what? Certainly not for researching scanners.

Methinks you're either trolling or you posted a bad link. :-)

No new news, no sites and nothing to report.

I honestly feel that a Digital Scanner is far off, for several reasons;

It will still need FCC Type Acceptance

There are different Digital Modes used from place to place, so there may never
be a do it all Digital Scanner

Project 25 seems as though it has lost steam

The Chicago Area Radio Monitoring Association will hold a meeting this Saturday, August 11th at Phillies Pizza Bar and Grill, Route 83 (The Kingery Highway) and 63rd Street in Willowbrook, northwest corner of the shopping mall on the southwest corner of the intersection.

Lunch is at Noon, the meeting starts at 1pm. You must purchase a lunch since we get the room for free. Besides, the food is killer. Suggest pizza, fried chicken and italian beef.

Meeting usually lasts 2-3 hours, 40-60 folks in attendance. All scanner enthusiasts are welcome, but be prepared to share some of your local freqs. Great place to meet like-minded folks from your local listening area in and around Chicagoland.

Happy Scanning! - Ted Moran / CARMA E-Mail List Admin

3127. Re: Scanners lacking in 800MHz Sensitivity: Improvement possible ??

Newsgroup: rec.radio.scanner

>of a way or of anyone who can do this, I'd like to know.
>
>Thanks,
>
>Geo.
Oh yeah, the problem is quite common for listeners in rural areas and
in the suburbs.

Reception on the 800mhz and above bands can be difficult. Using an
outdoor broadband antenna with the typical (cheap) RG-6 type feedline
is a big compromise on this band.

I have taken an inexpensive UHF type TV antenna and flipped it 90
degreess to make it vertically polarized. Then I use the $29.95 Radio
Shack in-line preamp (cat # 15-1115B) mounted right at the feedpoint
of the antenna with a TV type balun. This gives roughly 20db of
amplification, which more than compensates for the feeline loss of a
50 foot run of RG-6 at 800 mhz. I have 800/900 mhz pagers and other
crap nearby, and don't have any problems with overload. Signals that
were previously noisy are full quieting. I hear other signals that
were simply not present with the broadband antenna with no problem at
all. As a side bonus you also get tremendous performance on the 400
mhz band as well.

I use the above antenna system with a BC 780xlt, Pro 2005, and an
older J.I.L. SX 400 scanner.

It's not a difficult project and if you are serious about listening on
the UHF and Microwave bands you will find the results satisfying.

Ender

I just bought a used Relm MS-200 in excellent condition sans accessories for $95.00 shipped (from a well know dealer even). Was this a good deal? I have seen these scanners bring good money on ebay so if it is not a desirable unit I will resell it.

What is your opinion on this scanner? Do you know of any mods for it? Anything I need to know about it?

Thanks

Bob C.

3133. It's shuttle time again, here are freqencies to use...

Newsgroup: rec.radio.scanner
Date: 2001-08-09 21:06:31 UTC
From: TomR@astro.net
Message-ID: <3b72fabc.4634656@news.idsi.net>
Source record: 61547

From the Unofficial Space Shuttle Launch Guide:

Shuttle Frequencies
==========
The Space Shuttle transmits on three frequency bands: UHF, S-Band, and

Ku-Band. The UHF frequencies are simple AM voice and are very easy to copy. These frequencies are used for launch and landing operations, EVA operations, and as an additional voice downlink when other channels are in use for the current ground station has no S-Band capability.

The frequencies in use are:
296.800 MHz : Air-to-ground, or Orbiter to suit
259.700 MHz : Air-to-ground, or suit to Orbiter
279.000 MHz : Suit-to-Orbiter, or suit-to-suit
243.000 MHz : Standard military aircraft emergency frequency

The S-Band system is one of the primary Orbiter downlink bands. The voice channels are digital slope delta modulated and are multiplexed in with the rest of the Orbiter telemetry and is very difficult to copy. Much of the downlink TV is on S-Band also, but is wideband FM and should be easy to copy.

The frequencies are:

2287.500 MHz - Primary digital downlink
2250.000 MHz - Wideband FM with either main engine analog telemetry during launch, or TV during orbit operations.

The Ku-Band system is used in conjunction with the tracking and data relay satellites and is used much more heavily in Spacelab flights than in others. The data rate is very high (50 Mbit/s). These transmissions are directed to TDRS satellites in geostationary orbit on a frequency of 15.003 GHz.

(Information via WA3NAN, and WA4SIR)

Ed Sileo (edsileo@qnet.com) says that Shuttle audio can be heard on 169.4 MHz at Edwards Air Force Base (EAFB). The transmitter site is on Lehman Ridge on the east side of Edwards near the Astronautics Lab. This can be heard during all flights since you never know when the shuttle may land at EAFB.

Shuttle Audio Retransmissions
==========
Excerpt from the Goddard Amateur Radio Club (GARC) Shuttle

Retransmission Fact Sheet (from Jim Blackwell, N3KWU,
HRSBLACKWELL@deblur.gsfc.nasa.gov)

Retransmission of Shuttle air-to-ground audio from the GARC (WA3NAN)
may be heard on the following frequencies:

Frequency Mode Antennas
(MHz)
3.860 SSB LSB N-S/E-W Dipoles
7.185 SSB LSB N-S/E-W Dipoles
14.295 SSB USB 3-element Yagi
21.395 SSB USB 5-element Yagi
28.650 SSB USB 4-element Yagi
147.45 FM Simplex Phased vertical

Where SSB is Single-Side-Band and LSB, USB indicate either Lower and
Upper Side Band. A short-wave receiver possessing a Beat Frequency
Oscillator (BFO) is needed to receive these transmissions.

GARC maintains a Bulletin Board System (BBS) which is accessible by
way of the Internet, modem and packet radio. The BBS contains areas
with information on the club, mail distributed by the Amateur
Satellite Corporation BB (AMSAT-BB) listserver, SAREX bulletins and
Space Shuttle mission information. During Shuttle missions, users can
also access Keplerian Orbital Elements (Keps) which are generated by
the club based on information generated by NASCOM at GSFC (these
orbital elements are read over-the-air by our volunteer operators).
The BBS is accessible by the following means:

1. Internet: telnet to wa3nan.gsfc.nasa.gov (128.183.105.17)
2. Telephone: (301) 286-4137 (up to 14.4 kbaud supported)
3. Packet Radio: WA3NAN on 145.090 MHz in DC area.

Just follow the login instructions. Note: Full access to the BBS is
limited to members of the club.

GARC also maintains a WWW Server containing a wide variety of
information about the club, its activities, as well as links to other
Amateur Radio resources. The URL address is:

http://garc.gsfc.nasa.gov/www/garc-home-page.html

Excerpt from rec.radio.amateur.misc FAQ Part 3 (modified):

Shuttle audio is re-tranmitted by the following Amature Radio
stations.

Station Centre VHF 10m 15m 20m 40m 80m

keep this in mind quys what "art says" about the cc radio is actually a paid advertisment by the c crane company. he does it during the advertising portion of his show. art's owner premier radio networks is paid by the c crane company, then premier gives art the instructions for the advertisment. this is just like any other sponser of art's show.

most advertising like this usually makes too many outlandish claims. however, I've personally played with a cc radio myself, and it is what the ads say 100%. but I don't own one. art's sponsers tend to be very truthful, unlike a lot of other stuff you hear elsewhere.

>Now was that comment really necessary or even warranted?

Yep, in my opinion it was, and after all, these newsgroups ARE just opinions....

You are a hypocrite since you profess allegiance to the "Palm Beach Scanning group, " etc., proclaiming to monitor anything on the air, yet you throw a politically correct caveat into your statement in fear someone might think you were doing something wrong. In other words, we really DON'T monitor everything on the air.

You should then change your groups tag line to read : " If it's on the air, and my government allows us to scan it, we scan it!"

Like I said, spineless twit, but you are not alone......

This will be one of those rare cases where I reply again to a flame...

In my postings to the Newsgroups when it applies I have always made a point to note how important it is to maintain the Hobby of Scanning, and how the misdeeds of some on the "fringe" can only lead to problems for those who are quite content to monitor what is legal.

I am quite content to monitor what the government has seen fit to permit me to.

I do not attempt to say I have never done anything wrong in my life and I never would.

Thank you for pointing out that I am a hypocrite due to my signature/motto... I shall put serious thought into modification of same as to avoid being what you see me as.

I'll second that that. I did the same thing several years ago. At the time, I was trying to receive the NYPD 476 MHz transmissions. I live about 60 miles away with some rolling hills in between. The UHF TV antenna and preamp brought in signals that just weren't there before. And noisy signals became full quieting. That was with a PRO 2004 which was a bit lacking in sensitivity. Warning: Some scanners won't like 20 dB of broadband pre-amplification!

Walt, my comments were aimed at the scanner listener trying to monitor distant signals. We have to hope the designers of emergency communications systems can accurately estimate their requirements and build in enough margin.

BTW, 800 MHz signals do have some advantages inside steel buildings due to their shorter wavelength.

One man's opinion as ALWAYS another man's flame, when he disagrees.....

>misdeeds of some on the "fringe"

What , pray tell, are you talking about?

>I am quite content to monitor what the government has seen fit to permit me
>to.

Now THAT statement is VERY scary....yikes, I'm getting shivers.

>I shall put serious thought into modification of same as to avoid being what
you see me as.

Don't do anything on my account. As I said, just voicing my opinion. Those of
us in what is still a free society do that now and then, until I am limited to
saying "what my government will permit me to"
I will continue to voice my opinion.

Then again, I just may be all wrong...and simply flaming.

:)

Help I am the Victim of the NSAs Secret Projects...
The Whyfore to the Quest is that my husband of 17 years my first husband,
whom I had 5 beautiful children with is a powerful man in the IAM who works
at Boeing Defense &Space and they needed to divide and conquer this man,
either kill him or take him down emotionally... they did it we are divorced
they sent agents to break us up ... I was the victim as well as the weak link
well... we are both genius i.q.s and my kids and I are stuck in a
nighborhood in East FtWorth where they have installed nothing but Signit
agents and this will sound paranoid but I have moniters cameras all over my
property and they have LEO agents living here and they are terrorising
myself and my children so I have been attempting to fight back and armed
with JVC CamCorder using negative vision one can actually see their
invisible personell their leo agents
they use their microwave technology against myself and my children
they use their amplifications and all manner of their weapons in their
arsenal and I have discovered my back yard is their illegal dumpingground of
their
ammo and that is about all I can say hope someone can figure this out... it
isnt bullets I am referring to... PLEASE need someone to help me someone who
can help me wire things someone good at codes I am what I call technically
impaired don't even know how to hook up stereos and vcrs and stuff usually
thatis what I have men around for but the only men I have had turned out to
be NSA agents trying to entrap me on one thing or another set me up for a
fall...
so SOS someone please need bug detector here my house is full of bugs and
my van sets off street lamps and I accidentally brought one of their hidden
bugs into phase and when we were talking in the van their speaker started
going off and everything I said was amplified.
lol I seem to have something in my causing their hidden transmittors to
come into phase their codes accidentally not the ones we ususally see but
a screen came across on our t.v. one night recently when it was just on
channel three and just a blue background all of a sudden coded messages like
KUP and an 0 with a slash through it or maybe it was KYP I thought it was
an 0 my daughter thought it was a K and these codes flashed fast... I
brought their crap into phase somehow
oh and they have interdimentional vehichles ... they arent on this
plane parked in the yard across the street this is what takes their ammo
away
and these agents are busy daily dumping wearing radiaotion suits in my back
yard! Want to get help need some one whos sick of their stuff as we
are\
anyone else have to go through what my children and I do? SOS~~
Write me DrkGddss9@aol.com I will arrange a meeting for the first time in a

public place to protect myself and my kids

I know this is an odd request, but I am interested in what real people,
equiped with real scanners know. I have done a Percom search and will do a
complete net search Friday afternoon.
But, the databases are often incomplete.
Over in misc.survival a thread on emergency comms was on going and
one poster mentioned a "nationwide civil defense frequency".
He is in Indiania and this is a state wide freq there for emergency ops.
It is also listed as a fire freq and is also assigned to some PD.
So, I thought a direct questin to those with radios might provide a quicker,
more accurate answer than all the "offical" data bases.
Thank you for taking the time to read this.

I have a like new Pro 2042 that is for sale or for trade. I am looking for:
VR500,VR120,SC200, or any HIGH END base receiver. I am asking around $250
without a trade.
I am accepting offers. Please email vincentj2@mindspring.com or
kc7ryd@yahoo.com

3156. Looking for broadcasts from Germany to the USA

Newsgroup: rec.radio.scanner
Date: 2001-08-10 03:03:10 UTC
From: Lauri Winters <lwinters@mnsunpub.com>
Message-ID: <3B734EED.B0FCF7B5@mnsunpub.com>
Source record: 61569
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,soc.culture.german

Can anyone suggest frequencies to monitor to find broadcasts
that originate in Germany, beamed to the USA?

Thanks for answering here.

Source record: 61571

In Oklahoma: 155.025 is used by some cities and counties as a local govt. freq., which could be any usage. More to the point, it is used as main PD freq. by a small city (town) near me (Cushing, OK), so I doubt it is a "nationwide civil defense frequency". Oklahoma has a state-wide frequency, 155.235, licensed to the Oklahoma Dept. of Civil Emergency Management, as well as most of the counties and larger towns/cities in the state. It has been used during major disaster recoveries, and was also active during the Y2K New Year's Eve.

The PRO-2067 is nice, programming by computer is easy, but where's the " HOLD " button? How do you hold a talkgroup during " SCAN " from the panel?

Thanks,

Geo.

Hey, I wondered where those guys went! Their signals disappeared from my TV
a couple days ago... At least now I can sleep without the sound of black
helicopters over my house every night.

Hold down the "TRUNK" button for 2 seconds - and you have to do it while the channel is active. (You have to be quick!)
The downside to this, of course, is that you can only listen to that one talkgroup until you hit scan or manual again.

In Illinois it's called "ESMARN", used by state and local civl defense,
esda, iema, ema's, etc. Also mis-used for some local government operations
(trash haulers, public works, pd chit chat, etc). Good freq statewide, very
good for severe weather operations disasters, etc.

>Arty has never been able to pronounce hormone, he says "harmone".

Okay, all the above is true about ART and I like his show too.
But the poster asked about the CC radio. Now one good thing
to ask Mr. John Smith would be simply, "Why do you want one?"

If the answer is to listen to AB then he can save his money by
buying something else such as GE Super Radio.

If he wants maximun freq. coverage in a affordable portable
then he should consider RS DX-39x which can reach from
150kHz. to 30MHz. almost continous plus the FM band as
well as superior ant. option. and BFO and some more.

If he wants just what CC offers then he should get that.

So, John, what do you want?

Andrew

By the way, Those who like AB really ought to consider trying
the i-radio show of Jeff Rense. He's as good as AB with most of the same
guests and much less of the hype. Check it out on Yahoo!
As a matter of fact, most of my AB here on the east coast is i-radio
Art Bell anyway because otherwise I'd be up to 1am just to hear
the start of the show. Aargh.

In Utah 155.025 is the statewide Civil Defense frequency. It's one of the few VHF frequencies still in use since the state of Utah moved to an 800 MHz trunked system almost two years ago.

If you want to boost the reception range of the 43-49 MHz band on your handheld scanner, buy one of the telescoping whip antennas Radio Shack sells for $9.99. I use this antenna with all my handhelds, and from the first floor of my house I can hear cordless calls for several blocks in all directions.

Re:Tsmith
Isn't it funny how many agents use the names Smith and Jones! hehehe
Well Dude... sorry to upset your little applecart but... I do have witnesses and I do have many hours of footage plus codes and I will show to those who wish to see it
The game of the NSA when people have evidence on them and blow the whistle is to always first try and discredit them try and make them out to be paranoid delusional schizoids and if that doesn't work, then they try and set them up, as someone into child molestation and pornography... and if that doesn't work... then they go missing or suddenly get very sick and die
This is a long involved drawn out story people this has been going on for many many years... they have tried everything and I am one who fights back! I read Will by G.Gordon Liddy many many years ago
my will is like his my determination...
So go ahead try your best take your best shot... heres one back at you
Trains run... trains sometimes run away all by themselves... little boys are found murdered on r.r. tracks in Arkansas...
Planes crash!!! Military &Civillian...(Check Radar tapes at Kennedy Airport) (Read UAirbus Proposal)... Ships dump! Ships disappear and reappear as something other... Agents pass!!!(As in Cameron Missouri and btw ... I do have the Cameron proposal) & as in Ga) ...
p.s. The Real head of the NSA not the figurehead is one of my old lovers... Network Systems Analyst head of remote viewing... He is the doppleganger of Howard Hessman!!!!!!!!!
Ciao~!

Don't know about that - I notice the 900 handsets are 'usually' stronger
than the base units, probably because people stick the base where ever it's
convenient (like between the frig and microwave), don't put the antenna up,
etc., and tend to fade in/out worse; while the HF stuff is much more
consistent. And the best antenna changes user to user, sometimes the roof
discone is the best, sometimes the inside homemade 900 ground plane is best,
etc... Best advice there is experiment, experiment, experiment.....
Cheers n beers y'all.

I've owned the AR5K+ and the IC85K, and neither one really is optimal for **scanning**. Note the emphasis on scanning. They're both excellent all around receivers but they don't hold a candle to the PRO2042, which is the best scanner I've ever owned. Mine has an Opto and PROgramit in it and discriminator tap. With a trunk tracking scanner, you've got a much more sophisticated and useful set up than either the 5K or 85K at well under half the price. Add a SW receiver, and you still haven't paid anything close to what those top-shelf receivers sell for.

The 5K and 85K are slow; the relays clack-clack audibly and annoyingly, the software options for both are woeful, and despite their premium cost, they really aren't that flexible, or easily modified. Again, I'm thinking solely in terms of their suitability for scanning. No trunk tracking, of course. I didn't think either was worth the money and sold them both after about six months. Jack of all trade receivers, master of none. Both are like Volvos: excellent build quality, good all around functionality and looks, but no zip where it counts.

If you plan to mainly scan police, military and the rest of the usual stuff, you won't find the 85K to be perfect by any stretch.

Thanks, I needed that..... <G>

Trunking is far down on my list of priorities here in n/w AR - I'm looking for superior performance on hearing down in the dirt UHF signals, low intermod on everything else, 'extreme' versatility, PC control (keypunching several hundred freqs, just to get everything in proper chronological order is booooorrrrrrrrinnnnnnnnnggggg), and just the satisfaction of trying "The Best". Who knows, in six months this may be on eBay, or *.swap, etc., too..... In the meantime, it keeps me out of the bars and alleys at night (much to my wives disappointment!).....
Cheers n beers.

3191. On the Subject of Scanning Cell. Freqs. (Bad News)

Newsgroup: rec.radio.scanner
Date: 2001-08-10 23:45:11 UTC
From: cathexis@erols.com
Message-ID: <3b746ddd.63089594@news.erols.com>
Source record: 61504

Howdy,

There's been a fair amount of talk on scanning cell freqs. this week. Well this may be no surprise to many but today the kids and I went out to Best Buy just to window shop. Naturally, they've got the cell phone "section" right up front. I did a brief walkthrough and then asked the pimplely clerk, " Say, you've got all these digital phones here. Do you sell anymore of the analogue ones? "

"No sir," was the response, " We don't carry them anymore. I don't know anyone who does, although some of the phones will work in "analogue areas."

So there you go. If you want the spectrum coverage and are willing to take the chance (and many are and do) than you should not be paying one red cent more than you have to for unblocked scanners as pretty soon all you are gonna hear is Blaazzt, Breezrp, Borp ! Etc., etc. So it goes.

And I suspect that the reason 46-49MHz. is so quiet is that everybody's buying 900MHz. cordless and most of those are digital too. The new 1.2GHz. appear to be exclusively digital.

By the way, Best Buy wanted to sell me a 5 mlie range radio (GMRS/FRS combo). They wanted 229.00 for it !! One unit only, not a pair. Cripes. I could get a Tech. Ham license and buy a new, bottom line Yaesu for less than that and go 25+ miles easy with a good repeater and some luck. What a rip-off.

Have a nice weekend guys,

Andrew

I have the following scanners for sale.

1. Radio Shack Pro-2006 in excellent condition.
Antenna, Manual, and Original Box.
On a scale of 1-10 backlight is a 6.
Diode was clipped for cellular reception.
Asking $275.00 and willing to split shipping cost.

2. Radio Shack Pro-26 Handheld in excellent condition.
Antenna, Manual, Wall Charger, Leather Case.
Frequency Range 25Mhz to 1.3Ghz.
Asking $200.00 and willing to split shipping cost.

I am presently living in an area that uses trunking systems so I have no use for above items.
Please response to me directly if interested rather then tie up news group.

If I don't sell these items on the net I will be taking them to Shelby, NC Hamfest labor day weekend.

Someone was trying to take your money! Best Buy in the Carolinas carries the 15-channel GMRS / FRS handheld ... scanning, tones, calling, weather alert and weather scan, 1.8 watt output ... for $70 a unit. It's made by Audiovox (GMRS-1535).

Jeff Multer
Fort Mill, S.C.

>By the way, Best Buy wanted to sell me a 5 mlie range radio (GMRS/FRS
>combo).
>They wanted 229.00 for it !! One unit only, not a pair.

>Subject: What is 155.025MHz used for in your area?

Tennessee Emergency Management has repeaters on the frequency in that state.

In the Carolinas and Georgia, there are a variety of local government services on the channel. There are ten different users I've logged at home ... road department, garbage collection, school maintenance, animal control, law enforcement, etc.

It is very easy to change out in the 2022. You will find removing the old one easy, there might be a small amount of glue at the top to cut with a razor or sharp pen knife. Then it slides right out. Whole operation takes about 15 minutes.

The only reason digital is 'in' right now, is because it is supposedly 'secure' (so far). Not too long ago I was a messenger in Chicago and NEVER had a problem with analog phones inside buildings. When our service switched to digital, well, let's just say that this digital thing is waaay overrated, 'nothing but problems, but I guess you can't stop 'progress'. Vic.

The best way to handle this situation is to sneak in and extend the antenna of the cordless phone which you want to monitor. That way it stands out above the rest.

Just go up to your neighbor and say you lost youir car keys and can you use the phone. Wipe dog crap from your shoes onto the couch and when the neighbor goes to get a wet rag, switch out the antenna. Works every time. Usually you can pick up your neighbor talking about you right away.

Yes, they do work. I own several. And by the way a dictionary is a great way to spell Active Frequencies. Just kidding you.
Probably the best way to make this setup to work is through "triangulation". You get two frequency counters, and two cars. Both cars drive around with their frequency counters, and together, you can zero in on the frequencies. One guy starts at the top and the other at the bottom.
I know this sounds expensive (not even counting buying two cars), but believe me, it's worth it.

With this method, you can acheive 2x2=4 times the results, and you discover more and more frequencies as the distance between the cars gets larger.
My Dodge Colt has a frequency counter built in, in place of a CD player.

I'm sorry if all this is technical, but as your love for the hobby grows, so too will your technical expertise develop.
There is a great manual called "Frequency Counters for Everyone". It's about a thousand pages, but I can fax you a copy if you want.

Take care.

I us a soft nylon "universal" scanner case from Radio Shack, put a piece
of foam rubber down the bottom to raze the HS 200 up to the top lip
of the case. I cut a hole in the side of the case, for a ear phone plug.
The case also fits the PRO-90 (Uniden BC 235/245 XLT) It has a belt loop
and a Velcro strap going over the top, that holds the scanner in place.

3212. AOR 3000A squelch adjust question

Newsgroup: rec.radio.scanner
Date: 2001-08-11 09:29:54 UTC
From: Mike Alpha <mike_alpha61@DELETEhotmail.com>
Message-ID: <3b74fa1d$0$20909$7f31c96c@news01.syd.optusnet.com.au>
Source record: 61526

I recently bought an AOR3000A in excellent condition. There are no obvious problems with the scanner, but I have noticed that the squelch threshhold may need adjusting as there is an almighty "crrsshhht" at the end of any FM transmissions, no matter where the squelch is set - it is very annoying!

Is there a mod or adjustment to solve this problem??

Thanks in advance.

Mike

i have a good Radio Shack PRO-30,hanheld scanner,
covers to 512 mhz
works great with the AC adapter,,,doesnt work with batteries for some
reason..
just the scanner,and AC adapter/charger

price: 15.00 shipped

Speaking of habits, I wish everyone would get in the habit of using a spellchecker on their posts before posting them to the group. Second, from reading both accounts I believe that Radio Mart has gone overboard to please this customer. I would not send him another radio either without the second one he has being returned. I have never heard of a radio being exchanged like this unless they were DOA.

JMHO without the name calling and insults - "can't we just all get along?"

Naw. There is nothing inherent about "digital" that makes it more prone to in-building problems. What you're experiencing is a result of the buildout of the digital systems still being in progress, while analog was pretty much done.

And the main reason digital is "in" is that the service is far cheaper. The average mobile phone user isn't really aware that analog cell isn't secure, nor that digital is more so.

3228. 895XLT v 780XLT

Newsgroup: rec.radio.scanner
Date: 2001-08-11 16:40:23 UTC
From: Charles Tans <luvthehaight@yahoo.com>
Message-ID: <9l3n5polk1@bob.news.rcn.net>
Source record: 61542

FWIW, I've already tried to research these two units and have checked a number of previous posts.

However, I'm looking for opinions not available elsewhere that I think might be very useful for others including me considering breaking into the hobby.

I'm aware that the 780XLT is a "better" scanner; I know it tracks non-motorola systems, that it has more channels, and that it has considerably more bells and whistles. However, for someone who will not be a *serious* scanner user, who will be a casual hobbyist, but who would like to keep the unit for at least 3-5 years, is it a better choice than the 895XLT assuming the nearly $150 price difference is a consideration? From all reports, the 895XLT is a pretty decent scanner, and a lot cheaper--at least from my perspective. How truly important are the differences for the semi-casual user who might have to wait awhile if the verdict is in favor of the 780. thanks to all in advance.

Not necessarily so.

With a weak analog signal, you will still hear a noisy voice in your ear.

With a weak digital signal, at some point the error correction circuitry in the phone will be unable to keep up, and you will hear nothing.

As the signal gets progressively weaker, digital phones continue to sound great, until you reach a threshold where they drop out completely. With an analog phone, as the signal gets progressively weaker, the sound degrades as the signal weakens, but you can still communicate with a weaker signal than with a digital phone.

The same applies to the public service radio systems.

Source record: 61544

That is known as the "squelch tail". The squelch stays open for a
short period after the signal turns off. The length of time it stays
open varies from scanner model to scanner model. Unless there is an
adjustment in the scanner (which some scanners have), it would require
component changes on the circuit board to shorten the "squelch tail".

Mike Alpha wrote:

Anyone wanting to track EDACS Narrow or wide formats are unable to do so with the 895. Yes, it is a great scanner without the ability for EDACS trunking. The weather alert features on the 780 are better and the only real drawback of the 780 is the multi-level programming steps. All in all, the 780 is the best TT scanner I have owned, this is to includethe BC245, pro-92, 94 and 895....

EDACS is the only reason I bought it. I was amazed at the features when I finally got the hang of it's programming and ultimately the software control is great

Message-ID: <jXhd7.927$at4.1197152@typhoon.ne.mediaone.net>
Source record: 61463

I could go either way on this one... Which one is better depends a lot on where you live.

The 895 is an awesome scanner and you shouldn't feel that you would be giving yourself short shrift if you bought one. If you really think that your needs will be basic, then that would be an excellent choice for an easy-to-use, all around scanner for someone just getting into the hobby. It probably doesn't make sense to drop more money into something that you don't even know for sure you will enjoy. If you outgrow it, you can sell it and at least retrieve a portion of your original investment and put that toward the 780. I'll be that's what most people do when they get into any hobby (i.e. they trade up as their needs and sophistication evolve).

One thing to consider and that is whether you will be listening to non-Motorola systems. If yes, the choice is obvious.

If you live in an area where many different fire and police departments share the same frequencies on nontrunked systems, CTCSS decoding is almost essential if you want to follow the action closely. I think beginners would also find the preprogrammed service search features handy while they get up to speed.

But if neither of those factors apply to your situation, go with the 895. You won't be sorry.

Or better yet, when you have new neighbors move in next door, buy them a cheap 46 MHZ cordless phone as a "housewarming gift." That way, if they don't already have one, you can bet they'll be using your new Trojan horse of a gift. Then you can find out the REAL reason they had to move away from that other town.

There is no standard offset for government systems, local, state or
federal, at least on any I use.

It is whatever they can coordinate.

They do not have standards like amateur or commercial service.

For that matter, I don't know that there is a standard offset for
commercial repeaters on VHF. There might be but I admit I do not know.

I use a combo digital/analog cellular here (Audiovox) and I see a trade-off in different areas. The quality of the sound in digital mode is definitely better than in analog mode (and it's "secure"). The battery tends to last a LOT longer too the longer the phone remains in digital mode. I went to Memphis for a work-related conference in May and never had to recharge the phone's battery until the last day I was there (flew out Monday, flew back here to CA same Friday). And I really didn't NEED to recharge it at the time. It still probably had enough juice left in it to last the rest of the day, but I decided to play it safe and charge it anyway that Friday morning.

With analog mode, the sound quality is of course less ideal, but it's always been available as a backup when the nearby digital cell sites are full or whatnot, with the exception of very hilly areas I frequently drive through. As for batteries while in standby mode, I'm lucky to get even 2 full days on it - even if the phone is constantly switching between digital and analog often.

I own both scanners you mention, and the alpha tags alone makes the 780 worth the extra money. For example, why keep a printed list of trunk codes that you have to always refer to while scanning? You see 816 in the scanner display, you then you have to look up 816 in a list and see what channel that is, or memorize them all. On the 780, your screen says:

Dispatch-2
Simsville Police

or

F-15
Simsville Fire Dept.

No question, don't be cheap, buy the 780. =)

Try removing the switch box just to test. Not all switch boxes are created equal. Leave bios settings at default, make sure scanner is at correct speed as specified by the WinScan780 software. Lastly make sure you have the correct cable and that it is a known good cable.

I use WinScan780 and I haven't seen anything better yet. (Of course I haven't ever needed to contact their tech support either.)

=)

If you may want to listen to both conventional channels and a trunked system at the same time, the 780 is the choice.

If you don't think you'll remember who is on which frequency, go with the 780 (it has an alpha display for "naming" channels).

If you can afford the extra cost, you'll find the 780 will maintain its value longer, since it appears it will be upgradable to receive some digital trunked systems.

I have two 895s, and one 780 ... as others have indicated, they are both excellent receivers.

>new neighbors move in next door, buy
>them a cheap 46 MHZ cordless phone as
>a "housewarming gift."
>
True genius. Or give 'em as Christmas / Birthday / No-Occasion gifts.

Doesn't matter why .. just give 'em. As the 900mhz ones come down in price, the 49'ers will get harder to find. So we need to find sources asap. Here's a few suggestions ..

http://www.circuitcity.com/
http://www.bestbuy.com/
http://www.bluelight.com/
http://www.800.com
http://www.costco.com
http://www.uniden.com

Act now .. I'm afraid the 49'ers are going the way of the Tandy 1000. Such a shame.

Hours .. weeks .. months of "easy listening" with even the cheapest scanner.

Ahhh .. the good old days.

Leave a link .. before they're all gone.

Hi all. Would anyone know which freqs would be good to monitor for the mosquito spraying that's going to happen tonight? I'm figuring one of which might be 151.205, which is the Parks Police. Any other suggestions? Thanks.

3274. For Barter: Sony 2010

Newsgroup: rec.radio.scanner
Date: 2001-08-12 15:56:50 UTC
From: wrenn_thomas@hotmail.com

I purchased a brand new Sony 2010 in the Fall of 1997. I've had it sitting here on a homemade cardboard stand ever since.

I've never installed D cell batteries, I cover it when it isn't in use, and I even oil the antenna periodically. It's in perfect, unaltered condition.

I have the factory packaging, accessories, manual and even the original invoice of $364.45 from Grove Enterprises out of Brasstown, NC.

If you've ever done business with them before, then you know they're a class-act!

I'd like to consider trades for cell-capable scanners of any kind, trunk trackers, base scanners or CB gear of equal value and condition. Let's put the cash value at $200.

I'm not attempting to unload a respectfully handled feature-packed radio for neglected junk here folks, so please have something to offer before you bother to make one! I figure the person who isn't beset by that statement is the party I want to reach anyway.

I assure you, the 2010 I have is flawless, and I'm in the OKC area. If you're interested, please contact: wrenn_thomas@hotmail.com ..Thanks!

Message-ID: <10zd7.134$y66.196866@newsfeed.slurp.net>
Source record: 61492

This needs to be clarified. There is no standard offset on VHF. There is a standard for UHF and higher. The reason is, repeaters came into common usage long after the VHF band was pretty well saturated with users. The only way a standard offset could have been implemented for VHF would have required the mass canceling of existing licenses and reallocation of freqs among the existing users. That would have been total chaos, and difficult to do. The UHF and higher bands were set up from the start with repeaters in mind.

Mark

FYI: A lot of the FBI repeaters used to be 167 MHz input, 163 MHz output (back in the '70s). Now, those that haven't gone to the govt. UHF trunked systems are generally using 163 MHz as the input and 167 MHz as the output. But I don't know that this will hold true for all areas.

Speak for yourself. Ever talked to the Shuttle on a 5 watt handheld radio? Very much possible. Of course now it would be the space station. Some years back, a farmer here in Oklahoma who happened to be a ham was out on his tractor and had his ham H/H radio with him. Heard the shuttle going over and called on his radio and got through. (Didn't have anything to write on, so he scratched the log info on his lunch box. Got his 15 minutes of fame in the media showing off his handheld and the lunchbox.

Triangulation - 2 cars plus one transmitter = 3 points in a triangle.
That's what triangulation is, taking two known points (the cars), and
figuring out where the unkown point (transmitter) is.
Sorry -the reason i didn't explain that is that that guy to whom i was
replying didn't sound like an idiot.
I take immense pride in crafting my responses so that all intelligent people
can benefit from them.
Now I see that I have left some people out.

This is not a hobby only for the rich, or only for the educated, or only for
the non-deaf.
This is a hobby for all Americans, and all anti-Americans alike.
We should not be too proud as scanning enthusiasts to suppose that there
aren't those out there who could not benefit from kinder, gentler,
easier-to-follow instructions and explanations as those so often given in
our hurry-about culture. Now more than ever before we have a need to mentor
those who are just beginning to understand what scanning is all about.
Therefore I salute you and cry out, "go forth and learn".
It is by the asking of these seemingly silly , idiotic, mundane, time
wasting questions that often one's education is most solidly fortified.
Later in life, as you look back upon these wonder years, you will think that
you weren't much smarter than a door stop. But lo! It is within this
cradle of ignorance that true knowledge and a more complete understanding
is often born to other people. I hope that you can immitate them in some
small way and make yourself a better 'you'.
Think of it as a good thing like brushing your teeth is a good thing.

I value your input, and look forward along with my colleagues in the scanner
newsgroups to helping you all I can.

Your success is important to me personally.
Take care.

Hi All,

I posted a question the other day, and got many great answers, so here goes again. I am looking for an online database that gives frequencies and callsigns, and one that you can enter a frequency, and it will tell you who is licensed on that frequency. Cityfreq.com is a great site, but it only gives frequencies, . Also, is there a website that has frequency allocations broken down with the service that can use them---example 153.5-155.9 police, 46-46.5 fire, etc. etc.

Thanks,

****

Try this - http://members.aol.com/fd347/ - look for Radio Freqs lower left corner

Also try the scan-nyc list and the fireradio list at http://www.yahoogroups.com

Last I heard, FDNY will be reintroducing the UHF portable radios but using them in a analog mode (rather than a digital mode).

Well, I'll give you the answer I used.

The ext. ant. jack is a miniplug. Therefore
When I wanted to try a longer wire on it what I did
was to take an old mini-speaker with a mini-plug
wired to it, snip off the wire, then strip same and ran
the one end to the random wire and the ground to
ground. A multimeter can help you decide which
is gnd. Does this help??

FWIW, As long as I used this set-up for
a short (60ft.) random it worked fine. But I also have
a 160ft.+ random about 40 ft. up and wrapped around
5 diff. trees in my back yard. I occasionally use it for
my Yaesu tx. For kicks I tried it on the DX-392 recently:
It was totally overloaded and I got better reception on
the little Radio Shack 23 ft. reel ant.

hope all this makes sense and helps,

Andrew

3297. FS:Trident TR-2400 / AOR 100khz-2060mhz $175 *no cell blk

We bought this Trident TR-2400 1000ch wide range monitor / scanner new in 1994 for $499 before the final cell frequency ban. Scans 100khz-2060mhz. Same type / manufacturer of unit as sold under different names (Camnis , AOR , Fairmate). Low use, clean and very nice condition (never dropped). This was one of the last units with no cell block (scans clean through 800-900mhz). See below for pics and specs. With original box, unused NIMH batteries, car adapter, AC adapter and manual. $175 + shipping.

email: ebw@hifitown.com

See picture of our unit here:

http://www.hifitown.com/trident_tr2400.jpg

Walt & Early ** + Shipping - For USA: Prepay by United States Postal Money Order (available only at Post Office). Overseas ok.

Some of the Rat Shacks will offer a better deal than that if you are a wise shopper. To wit: Currently some RS's are selling the 2000 PC book for 5.95 Of course, it's a year + out of date. But many freqs. like F&R or police don't change that much from year to year. Something to consider.

howdy,

somebody else was asking about PC and made me
wanta ask the ng a question:

Just how accurate is Police Call for your area?
Frankly mine could be a lot better. A lot of it is right on,
to be sure. But my local town (to remain un-named)
has about 8 local gov't freqs. listed and I've only heard action
on one of them. And no police action period. I expected to
hear digital garbage only, but was surprised to hear nada.
Also, someone else in a neighboring jurisdiction swears he's
hearing more and more police activity on 800MHz. which
doesn't even appear anywhere in the book. Any comments
on this out there??

TIA,

Andrew

A Scanning Joke:

A: Knock, knock !
B: Who's there ?
A: Consumption.
B: Consumption who?
A: Consumption be done to get me a digital scanner?

Police Call is as accurate as the agencies that are responsible for filing / maintaining the licenses.

Some agencies continue to maintain licenses for radio channels they no longer use.

Some agencies will operate under the license of another agency, such as when a town uses the county's or state's channels.

Some agencies don't maintain their licenses. I have several agencies in my area using frequencies for which the licenses lapsed (and the callsigns were deleted).

Hi,

I walked in to Lentini's in Newington last Monday (Aug 6) and picked up a BC 780 XLT from them. I have purchased several items from them (30 minute drive for me) and have always been pleased with their willingness to please the customer. Bill seems to be very up to speed with the BC 780 XLT.

I have used WinScan and TrunkStar and very much prefer TrunkStar for ease of use in programming and making it possible to quickly get through the fairly steep learning curve this scanner can present. WinScan corrupted one of my trunking banks and managed to spray inappropriate data entries into many data fields. I ended up clearing the scanner's memory entirely and reloading my data with TrunkStar. Never went back to WinScan after that. My experience might not be typical, keep asking around, I have found many happy users of both WinScan and TrunkStar.

I'd suggest calling Lentini's and asking them to put one aside for you. They had a good supply of them when I was there, but my impression was that they go fairly fast. When you get there they have a BC780XLT for display on the counter that you can play with to check it all out. Also, they are happy to let you open your box up and test it all out to assure it is not DOA or something.

Enjoy the radio, it is outstanding.

Ender

Message-ID: <15fentova8ekgvh1lk4c2ca98ec2sqt98r@4ax.com>
Source record: 61420

I walked into a local shop on a Friday to buy the 895XLT and saw the 780XLT sitting right next to it. I played with both of them for an hour, side by side and walked out of the shop with neither one. I only wanted to spend the amount asked for the 895XLT, but the 780 was walking circles around it in features and general peformance. So I waited and thought about it and went back to the shop after the weekend and didn't even flinch as I got the 780XLT. I love it and don't regret the extra expense, it is an amazing receiver.

So then the above statement, when your prior comment of "I use
WinScan780 and I haven't seen anything better yet" is taken into
consideration, clearly indicates that you are indeed an idiot.

> have I needed any other features then what WinScan780 offers.

What
> specificly does TrunkStar780 do that WinScan780 doesn't do or do better? Or
> do you even know?

Yes I know, as I have both products, I'd enlighten you as to why
TrunkStar780 is superior, but I don't have a certificate for teaching
'special ed,' so you're on your own.

And the 800 MHz activity could be under an umbrella license, in which many different small agencies go together on a single trunked system. As I understand it, the FCC requires this sort of thing when a smaller agency wants to go 800 MHz trunked. My city (<50,000) was looking into a trunking system, and was reportedly told by the FCC that they would have to make the system available to the county as well as the small towns in our area. As everybody wanted to be able to use the system, but nobody wanted to help pay for it, it didn't happen.

Hello everyone,
I have a question about the Radio Shack PRO-76 scanner, and if anyone could help with this it would be great:

The Pro-76's packaging and catalog entry mention that it is "COMPUTER PROGRAMMABLE" but none of the Radio Shack employees I've talked to know anything about this. Is there any product I can download or buy that will let me program this scanner through my computer?

Thanks,
Mike

3312. PRO-2066 more sensitive than PRO-2067?

Newsgroup: rec.radio.scanner
Date: 2001-08-13 05:20:30 UTC
From: leadenwah@aol.com
Message-ID: <20010813012030.22029.00000664@mb-fl.aol.com>
Source record: 61429

I took a PRO-2066 and a PRO-2067 today while driving and switched the two between the same mobile antenna for comparison's sake. The 2066 seems decidely more sensitive than the 2067.

Of course, the 2067 has many nice features especially the Alpha Tag option for talk group ID's, and the fact that it does other than Motorola only trunking. But, when you get down to basics, it has weaker audio and lower sensitivity in my comparison of the two. At times, on marginal signals, the 2067 just didn't pick up the signal.

Perhaps a signal pre-amp might help the 2067. Does anyone have experience using a pre-amp for 800MHz on this radio?

Thanks,

Geo.

3314. frequencies for the California State Fair/ Calexpo

Newsgroup: rec.radio.scanner
Date: 2001-08-13 06:56:19 UTC
From: rapture1@mindspring.com
Message-ID: <419381f6.0108122256.3ce4f46a@posting.google.com>
Source record: 61431

Once again, I will post this, with the State Fair shortly upon us (August 17 to September 5) See MY OWN personally compiled list, most frequencies of which I obtained from listening myself. I have not found Police Call to be of much use in this area. They really should have put all known recurring Calexpo/State Fair frequencies into a "Calexpo" section in Beyond Police Call, not sift through the police part of the book for the police and the "Beyond Police Call" for the one Water World freqency (there should be more than one, I have heard at least two) Anyway, here it goes, look down below this sentence.

Note: These may not necessarily be in use. There may be some inaccuracies. Mea Cupla.

Police
453.150 & 474.840 Seem to be the same. These are the most active, on during
major events and sometimes at other times. Most active during the State
Fair, every year since at least 1998.

Maybe these will come up ... only seem to be used near or during the state
fair or other major events:
453.350
453.800
479.850
482.500 (I have only observed this on July 4th, 2000)
471 (or is that 491?).537 I have only observed this at the Sacramento County
Fair, which used police in the uniform of one of the school districts.
172.500 heard in 2000 Fair, a vendor was attacked- is a police freq, or
vendor support?
also check nearby police frequencies, such as 468.350, which I presume is
for the city police stationed in the Arden Fair Mall

Vendor Mic Frequencies: (only heard on grounds of Cal Expo)
Sac County Fair 2001
169.445 kitchenware vendor
171.845 another vendor
CA State Fair 2000
169.440 cookware vendor (maybe two vendors on this freq?), sells the Ginzu
knife

171.940,171.870, &171.905 Ladder Salesman
167.925 "Sweepa" booth
172.990 Another vendor
498.425 ?
171.500 Blender Machine Salesman
494.200 "Wing" ladder sales booth

Vendor Support (not mic frequencies)
486.287 Food Sales support? (1st heard in 2000)
486.325 (1999 at least) Drink Sales support?

Carny mics (Unless noted, only heard in 2000, at the fair itself)
472.350 & 450.650 (only heard in 1998, with excellent range, over twenty
miles away!) NBA Basketball basketball dunk game
170.245 Water balloon gun game?
169.505 Another carnie
171.845 Ball tossing game
151.740? Another ball tossing game?

Performers/Non-selling Exhibitors mics (only heard at Calexpo)
CA State Fair 2000
493.750 Sky Shivers, of the Sky Shiver's Goat Show at Goat Mountain (now
gone) mic
494.512 "The Iron Horse" show, Clown's mic
494.112 Pontiac/GM exhibit of their vehicles, between Main Gate and
WaterWorld main gate- a GM/Pontiac representative woman's mic
Sacramento County Fair 2001
171.840 "Cook's Racing Pigs" show/exhibit announcer mic, Cook presumably
(not the Poker Pavillion show of the CA State Fair that existed before
2000;
this is privately funded and organized)

Performer Support
453.750 CA State Fair 1999 at least (or related personnel)
475.500 CA State Fair 1999 at least (various sorts of maintenance,
including
gates?)

Video Audio?
458.512 This was heard briefly during CA State Fair 1999, sounded like
what
might accompany one of the video presentations for one of the
exhibits.

Paging
482.? (Heard during 1999 CA State Fair)

Amateur Radio heard at the CA State Fair 2000
467.637 A girl talking to her mom

Probally Amatuer Radio
467.587
467.312
467.712
467.587
475.425 "No one came to get our beatles"- contest or exhibit
participant?
484.362

Live TV/Radio remotes (also used for other events)
450.750 KRXQ "98 Rock" live remote at 2000 CA State Fair
455.700 "Cool 101.1" & "Arrow" combined live remote (1999 CA State
Fair)

TV/Radio frequencies not used so far at Cal Expo-
171.775 Radio Disney Sacramento events (not on air- a mic for event
only,
used at least once in 2001)
455.750 "KNCI" 105.1 FM live remote

Also check news crew frequencies for occassional coverage (such as
450.100
KCRA news technical crew), 485.425 KCRA News, 450.850 (KFBK traffic
ground
crew), 450.225 ("Commander Bill" KFBK), also 450.612, etc.

WaterWorld USA Sacramento
472.087 Lifeguards? (only heard in 2000 at Cal Expo)

"The Point" amusement center
567.562 Employee (only heard at Cal Expo in 2000) Very interesting
talk.

For my area, Sacramento County, Police Call sucks bad. In the edition I have, 1996, it lists just one Waterworld frequency for Sacramento, which I have never gotten to work, and none for Waterworld in Concord. Nor do I think that one frequency is really all there is used by Waterworld Sacramento. I have heard at least two completely different frequencies, one for lifeguard, the other I'm not sure of. It is also fustrating that the general Cal Expo and the California State Fair were not listed as a group in the "Beyond Police Call" for Sacramento, in any category. My favorite area of interest is Calexpo, so this is damn fustrating. Also I would like the police grouped together with other Calexpo frequencies. I cannot tell what are the California State Fair Police (Calexpo police's official title) in the Police section of the book. Do I look under 'Sacramento PD' or what? This is not part of the CHP, nor the local police (although local pd do volunteer to work for it) This is why I have posted my own Calexpo/California State Fair list. And what about the police at Arden Fair Mall? These are real city police, not private security. Do I have to go through all the local PD frequencies to find the Arden Fair Mall's frequencies? (by the way ... the mall will allow you to have a scanner but are very unwilling to give out frequencies, rather rudely. The CA State Fair is much better. A cop there actually told me what kind of frequencies they used, old county freqs, and they have no problem with scanners on site, but won't release freq lists) Also, why do I have to go through all of the private security freqs used at Downtown Plaza? That company has people all over the city! It seems to me what would really make sense would be to group freqs by specific areas in a city, rather than owners. I am really only interested in listening to things happening at Calexpo, the Arden area, the State Capitol, City Hall, Old Sacramento, Arco Arena, and Downtown Plaza. I don't care about all the Pinkerton Security action in the city, just at Downtown Plaza and Waterworld USA Calexpo (which is run by Six Flags, not the Calexpo Authority). (I think WWUSA uses Pinkerton ... I know Downtown Plaza does)

So you see the real problem, that Police Call can't group specific AREAS under multiple owners well.

Furthermore, I have never gotten much luck from the freqs it has listed. Arco Arena's freqs that Beyond Police Call lists never seemed to pop up. It took some random searching on my own to get a security freq from there.

And where do the freqs for the Downtown Guides fall under? The Sacramento Chamber of Commerce? The Downtown Partnership? The Sacramento Police? (I am pretty sure I have a freq for them, if you want one)

So you can see some of the of problems Police Call has.

Don't expect Police Call to be accurate, when you are using a five-year-old edition.

Second, you need a better understanding of how the licensing works. For instance, police at business facilities might be on local law enforcement frequencies, or frequencies licensed to the business.

Also, when checking for licenses for an entertainment facility, the licenses MIGHT be under the name of the parent company, rather than the facility name. And, if the facility has come under new ownership in the past few years, the licenses might still be under the former owner's name.

"Beyond Police Call" is a suppliment. It's not intended to cover every non-public safety frequency in your region. Spend a little time to learn how to use the FCC online database, and you'll answer your own questions.

Emilio,

Now you really have me confused. Just what are you triangulating
here?

Are you trying to determine the location of the transmitter site? You
do that by triangulating with directional antennas and radios tuned to
the transmitter, not by using frequency counters. You find the
transmitter frequency with a frequency counter.

Perhaps you could explain in more detail for those of us who have been
left out.

Walt

To further relate to Jeff's point: The listings in Police Call are raw license listings from the FCC data base. Those listings show Callsigns, type and number of transmitters, location, etc. as it will show on the licenses. Sometimes it's worth tuning around to some of the 'abandoned' frequencies. They might still be using some of them for direct comms. Any informative notes have been supplied by readers. Their uses in a given area may be diverse.

I would like to know what frequencies are used for the cordless microphones and headsets frequently used at music concerts, churches, lectures, etc.

Thanks

3333. NYS Police Trunked Radio System Question

Newsgroup: rec.radio.scanner
Date: 2001-08-13 18:57:54 UTC
From: TheF16Falcon <thef16falcon@si.rr.com>
Message-ID: <SqVd7.10846$l7.2713497@typhoon.nyc.rr.com>
Source record: 61350
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi all. The NYS Police Trunked Radio System is an EDACS, and all scanner sites list the freqs as follows:
1. 866.0375
2. 866.5375
3. 867.0375
4. 867.5375
5. 868.0375

But when I checked out the FCC website, 8 different records popped up. For the first one, there are an additional 5 freqs:
1. 866.0125
2. 866.0375
3. 866.5125
4. 866.5375
5. 867.0125
6. 867.0375
7. 867.5125
8. 867.5375
9. 868.0125
10. 868.0375

The second record displayed the typical five that I listed at the beginning...Any ideas why this could be?

3334. Re: frequencies for the California State Fair/ Calexpo

You might also try the FRS frequencies...

I did last year and heard a lot of vendor traffic and other oddities that I could not readily identify.

I have a ic-r3, and it does not receive SSTV on its own screen. It receives AM-TV and FM-TV and that is all.

however, if SSTV reception is a must, then tap the discriminator output, then you can download freeware SSTV decoder software, and receive SSTV images on your computer screen.

Anyone know if the FDNY still uses 153.83, 460.575, or 460.625? Thanks.

3341. Introduction to speech inversion descrambling

Newsgroup: rec.radio.scanner
Date: 2001-08-13 21:44:13 UTC
From: ctpds49@aol.com
Message-ID: <20010813174413.27103.00005590@mb-md.aol.com>
Source record: 61358

Speech Inversion
How Frequency Inversion Is Accomplished

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

I believe a dish certainly has its advantages, especially when powered with the kind of horsepower you say your girlfriend has experienced.

In my mind, and I'm certainly not alone here, it comes down to a difference in engineering stratagems. With the bi-colt method, there can be no error, except perhaps a user error (the old nut behind the wheel theory). If properly calibrated, each unit can deliver as much performance as it is capable of. This rings true if one considers that triangulation is an idea that exists only as a mental construct.

On the other hand, a dish requires a complete dependence on the material forces at work upon its physical structure.
If there is no dish, or if the dish has been damaged by outside forces such as a rhythmic rocking motion, there are no, and can be no valid results.

The triangulation method, (or three-some) is the most widely used and readily available technology I know of today.
I'd hate to argue with some of the best minds in the business.

One the other hand, a wide array of dishes (WAD) has awesome performance advantages (and unfortunately a high cost) .

There is a wonderful in-depth discussion about this use of triangulation at http://www.radiosciences.com/articles/recent/radi/freq/use/fox/default.htm

Message-ID: <9la1m4$2ru$1@bob.news.rcn.net>
Source record: 61366

My thanks to all who took the trouble to respond with some valuable information. Judging by a few posts that appeared subsequently, others may have been influenced to go for or switch to the BC780XLT as well. I will have to wait awhile, but being in a major metropolitan area, it appears passing on the 780 would be penny wise pound foolish. I have to say the alpha tag issue also influenced me.

Hopefully others in the same situation will benefit from the thread in the future

> to say the alpha tag issue also influenced me.

i'm in a city where the most my most 'advanced' scanning need was ctcss. my decision to get the 895 was based soley on computer control.

i have an old 286 notebook and an ANCIENT trs-80 model 100 (portable computer from '83) dedicated to it.

i get the alpha tags and unlimited channels via software.

if we ever get trunking of ANY kind here, i'll probably upgrade, but i'm ten years or so between the 890 i bought and the 895 :/

I've got 2 topics to ask the ng tonight, this is the first one.

Howdy,

What is CTCSS ? Is this something to do with trunking?
Why would I want to pay bucks for an option card to monitor them?
Just to hear little beeps ? Would appreciate if someone could explain
all this to me.

TIA,

Andrew

3358. A Newbie Asks: Best way to "Cold Scan" ?

Newsgroup: rec.radio.scanner
Date: 2001-08-14 05:01:28 UTC
From: cathexis@erols.com
Message-ID: <3b78ad6d.176249725@news.erols.com>
Source record: 61375

And this is the 2nd topic I'm hoping for some feedback on.

Howdy Again,

What I mean by "cold scan" has nothing to do
with scanning outdoors in the nude.<grin>

What I mean is this: Say you pull up to some
site you want to scan (Arby's, Cop Station, whatever),
You know that you can use Internet or Police Call to look
for some freqs. Trouble is -- There's a bazillion freqs. that,
say, McDonald's uses nationwide. How best to pin 'em
down? That's what I meant by cold scanning. Scanning
a physical site that you don't know for sure what they're
using.

I've read that one way is to just take your ant.
off and scan without since your scanner will only hit on
very strong (read close) freqs. by default. Is this a good
technique ? Do you use it or what would you do?

Just to be sure, I should probably add that I'm
obviously using a hand-held , say sitting in a parking lot
outside. Also, I do find Police Call frustrating to use in this
kind of situation. I own one and use it, but seems that there
could be more efficient way than sitting in parking lot punching
in all those "bazillion" numbers to see which one it might be.
Hope I've made myself clear to all who care to respond.

Thanks,

Andrew

3359. Will the BC245XLT Scan the Trunked Cell Police Frequency?

Newsgroup: rec.radio.scanner
Date: 2001-08-14 05:06:28 UTC
From: barry@nospam.hotmail.com
Message-ID: <3b78b0d2.740547@news.microflash.com>
Source record: 61376

I can get this channel on a conventional scanner but not on my trunk tracker. Well actually the trunk tracker when taken out of trunk mode will recieve this frequncy. It is in the 860 mhz range and easily recievable on any 800 mhz scanner.

Is it worthwhile to get a 245XLT, will it get the police cellular while I am scanning in trunk mode?

Thanks in advance for your help.

DW,

You are going to have to provide a lot more information before anybody can help you with your questions. You need to tell us where you are located, first off. Your location will help somebody in your area (hopefully) respond with some of the data you are asking for. The "T-code" might be a giveaway, as I personally have never heard that term used. In most areas, the police use "10 codes" (10=Ten=T?? Maybe, I don't know.) But we have to have your location before any assistance can be given. The frequencies and bands used are going to vary so widely from place to place that we can't give you any useful information. And for those of us that don't happen to be familiar with the BC148XLT, it would help if you would provide the ranges covered. For instance, it wouldn't do any good for me to give you some likely air band frequencies if the 148 doesn't cover the 108-136 MHz range.

One area you might try scanning is the 144-148 MHz range, this is where you'll find the Amateur Radio 2meter repeaters. They can be fun to listen to. Also try the 46-49 MHz range, this is where the FRS radios and many of the walkie-talkies sold by Radio Shack are located. There are other things located in this area that you are not legally allowed to listen to, so if you should hear your neighbors' cordless phones, you should skip to another frequency. (Yea, right!) If you do ACCIDENTLY happen to overhear a cordless phone conversation, be smart, DON'T REPEAT IT!

Post again with the requested info and somebody may be able to help you.

Mark

Source record: 61379

CTCSS = Continuous Tone-Controlled Squelch System. This is a subaudible tone that is transmitted by a radio (when so equipped and in use) in order to open the squelch circuit on properly-equipped receivers. If, for instance, there are three police agencies in a 30 mile area that are on the same frequency, the constant chatter can interfere with effective operations. If each agency were to use a different CTCSS code (also known as PL tone) for all their radios, then only the radio traffic meant for them will be heard. The benefit to you, the scanner listener is this: you can screen out the traffic from the agencies you aren't interested in. If you live in City "A", and Cities "B" and "C" use the same frequency as "A", you can set the CTCSS decode to "A" 's PL (CTCSS) tone and not have to listen to the other radio traffic.

PL tones (PL is a Motorola trademark for CTCSS, "Private Line") are also used by EMS personnel in areas with more than one hospital. Many times, several hospitals will use the same frequency, but with a different PL tone. The EMS crew can select which hospital they call by selecting the proper PL tone via a selector switch on their radio

PL tones have nothing to do directly with trunking. Most, if not all, repeater systems use the PL tone on their receive frequencies so that only the proper radios will be repeated. Think of it as selective access. Only the radios transmitting the proper PL tone will be able to access the repeater.

And no, you will not hear the CTCSS tone, no "little beeps". These tones are in the 67 to 250 Hz range, below normal hearing. They are normally filtered out by the radio's audio stage anyway.

And in case you haven't noticed, CTCSS and PL are often used interchangeably, with many people generally using PL, even though this is a trademark belonging to Motorola and is intended to designate their CTCSS system. The systems are interoperable on the standard CTCSS tones.

Clear as mud?

First thing you should do is get a look at the antennas used. This will
often give you a good clue as to the frequency range in use. With some
practice, you can learn to distinguish the frequency range by the appearance
of the antennas. This is too big a subject for me to go into, Police Call
has some information on this. When you know what frequencies your local
police are on, then start looking at the antennas on their handheld radios.
VHF-low will look different from VHF-high, and UHF will look different from
either of these. Then start looking around your target fast food joint for
their base unit. If you can't see it from the counter, try looking in the
window when you go through the drive-through. This way, you can isolate the
frequency bands used. Then you can start searching the bands in use, using
the information from Police Call or the Internet as a guide. Remember, the
radios used at drive-throughs are low power, so you'll need to be close to
pick them up.

Not as long an answer as the last, but my fingers are tired. Good luck!

You have the right approach in mind.

As far as isolating the frequencies used, this can be a toss-up, but the FCC Site is a good starting point to check by City/County/License Holder.

Also a chat with the Radio Tec. at the PD may provide what you seek, some are more than happy to provide a list of frequencies, though some are not.

The antenna removal trick will do well for close signals, I did this after reading the same advice; set my Handheld up in the car with a VOX tape recorder and did a limit search in the general range I was hunting... got some activity and knew I was in the right range.

Police Call is a good source to start with, also local Hams and other Scanners can help.

3378. Good Resources for 245xlt Users

Newsgroup: rec.radio.scanner
Date: 2001-08-14 17:57:00 UTC
From: - <psleprob@hotmail.com>
Message-ID: <3B796679.C09DA21D@hotmail.com>
Source record: 61395
Cross-posted to: alt.radio.scanner,rec.radio.scanner

The 245xlt Resource Page is a great place for owners of the 245xlt scanner (and other scanners) to find FREE frequency and software resources for their scanner. The web page has been up a little over 4 months and my ISP says there have been 29,894 "hits" from 7,554 "unique" visitors who downloaded the data files and cheat-sheets over 5,424 times!!!! We are very happy that people are using this all_volunteer_site!

With that said, WE NEED 245XLT USERS TO TAKE A LITTLE TIME AND SEND US THEIR OWN DATA FILES FOR THEIR "HOME" CITIES TO ADD TO THE DATABASE!!!

7,500 People have downloaded 5,500 files, but ONLY 19 people/clubs have submitted files! Even more telling is that half of those files were made available by just THREE people/clubs!!! That is a terrible ratio.

PLEASE GIVE BACK TO YOUR HOBBY!! Everyone who owns a 245xlt develops a group of frequencies and IDs that they monitor. "Local" people develop much better scanning plans than a visitor. Please take the time to send in your data file AND some brief documentation for us to post to the website. Directions for submitting files are listed at the site.

SHARE A LITTLE! Let others benefit from your hours of collecting data! We don't even have major cities like:

Houston
Las Vegas (I get so many requests for this one)
New York
Boston
Los Angeles
Denver
Vancouver
Toronto
Cleveland
Detroit
Vacation areas, etc., etc.

If you haven't ever visited the 245xlt Resource Page, on it you will find lots of FREEware software resources to use with the 245xlt. This page also give you access to 39 different sets of preprogrammed data files for various cities and auto races which can be uploaded into your scanner in less than a minute!!! Data files include cities around the world. If you are traveling to another city you will want to check it out.

Thanks!

3379. power supply question

Newsgroup: rec.radio.scanner
Date: 2001-08-14 17:58:45 UTC
From: Vinnie <valair@btinternet.com>
Message-ID: <9lboqr$8j6$1@neptunium.btinternet.com>
Source record: 61396

Hi
I have a spare power supply from a computer and I would like to set it up as a power supply for my scanners etc, it has quite a few 11.9volts dc outputs, and three 6v DC outputs, but I think they are only about 300mA. There is one output that is 3Amps but it is sending out 16.7v DC. Do the scanners regulate the input voltage to this extent or do you think it is likely to cause damage to the scanner (Pro-2042 & Pro-2006)the rest are handhelds so the 300mA outputs should be fine.
thx
vny

3382. Scan Across America 2001

Newsgroup: rec.radio.scanner
Date: 2001-08-14 19:08:40 UTC
From: Emilio Goldstien <egoldstien@sofa.net>
Message-ID: <YGee7.1311$Wm3.967687@news1.rdc1.sfba.home.com>
Source record: 61300
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Beginning in September, 2001 then 2nd Annual Scan Across America will get underway.
==========

With participants from more than 12 countries, we look forward to making this year's SAA another huge hit.
There will be informative lectures from top industry experts, and prize drawings worth 5,000 in goodies and give-aways.

Scan Across America is primarily a fundraising and charitable event dedicated to scanner enthusiasts who are interested in promoting family-oriented values, raising money for charitable causes, and casting scanning hobby enthusiasts in a more positive light.

WAY TO GO:
A final "Congratulations and Thank you" to Daniel Fran&#65533;ois-Esprit Auber who as our top finalist last year logged an incredible 3204 hours and generated nearly $1200 for "Shoes for Tots" last year.
Dan lead the pack as SAA raised more than $2900 for ourselves and our charities.
Dan will turn in his Royal Antenna at the end of his reign next month.

THIS YEAR:
This year's charity event will be a benefit for the discovery of Chandra Levy, who as many know has not been seen in more than 100 days.
Although many of us never knew Chandra, our hearts go out to her and hope that she turns up.
We just have to keep digging I guess.

It is possible that during the scanning marathon, someone may overhear some mention of Chandra Levy, which could be construed as relating to some sort of evidence in her case. Therefore, please read the Legal Disclosure Statement that will be included in your packets.

Many of the lectures will be recorded and made available on audio cassette; we have a quality assurance team in place to make sure that there are none of the empty tapes sold which caused so much confusion last year. Keep your receipt just in case, as we will no longer be able to refund over $30 with just a blank tape alone.

THIS 'N' THAT:
There was a little confusion last year, as many people did not read the instructions which stated that a scannist must log at least 100 hours in order to qualify for any of the final grand prizes.
This year we have removed that restriction so now anyone who logs any number

hours can be eligible.

Also, as you go around signing sponsors up, please round your monetary figures in increments of 10 US cents, and your hours in increments of .25 hours.

Other than that, please visit our website http://jim,putourwebsitehere for complete instructions and latest news, including signup fee information and payment types accepted
Please do not send me personally a check anymore.

THAT'S IT:
If you are returning from lasts year's event, this event will be much better and many of the legal kinks have been resolved.
If you will be joining us for the first time, "Welcome aboard!".
We have some of the best experts in the field, and with your help and money, the quality of this organization will be much better off.

Keep your feet on the ground, and may your antenna point at the sky!

EG

Unfortunately, they're all advertiser suck-up rags who cater to old fart ham radio operators. Read www.strongsignals.net. At least you'll get manily the straight dope, with only a little suck-up to the retailers who provide the freebies and other goodies for review.

There's also Scanning USA and even "SWM" out of england that offers
some info. I will buy them all if affordable that month. but I consider that
MT is probably the most complete. Since you know what you like, my advice would
be to scan (no pun intended) each issue of the various rags and just buy
what appeals to you. That way you build up your own personalized library
of favorite articles and references.

Several reasons:

o One is that someone will ask a question that has been asked 1000+
times in the past without checking to see if it has been asked.
Some people who are tired of this snap back in a way they never
would in person.

o Another is that some bitter people will take someone who asks a
frankly stupid question and snap back at them rather than explain
the proper answer patiently. Usenet is full of myths about things,
and killing them is nearly impossible.

o Even more bitter people intentionally give bad/damaging advice,
that, when applied, will destroy someones equipment. Without a
contradictory response, someone will lose their gear. Should no
one say anything?

o Finally, some people just lose patience with others who are
clearly over their heads... there was a guy who was "fixing"
his radio with a soldering iron used for soldering copper pipes
as well as duct tape. Someone went ballistic at him...

Most of what it comes down to is that people say things on usenet
they'd never say in person. Back in the Good Ol' Days when newbies
actually read news.announce.newuser, there was a bit of advice
there: Always point a loaded newsreader at the ground. Translation:
Let your temper cool before sending that response. That accounts
for *most* of it, but there are people out there who are just plain
ol' fashioned sh*theads, too.

Follow http://www.strongsignals.net and save your money. Scanning is very localized and magazines are national thus of minimal use. On Strong Signals you can get the absolute latest radio information and reviews. The message boards are a good place to get questions answered too and avoid all the newsgroup spam stuff.

3401. Scancat Gold experinces???

Newsgroup: rec.radio.scanner
Date: 2001-08-14 23:30:45 UTC
From: Don Parker <tazman@cox-internet.com>
Message-ID: <tnjd5ejr0qu271@corp.supernews.com>
Source record: 61318

Any pros or cons for Scancat????
Just got a AR5000+, that's dy-no-mite (not real user friendly on some things - like scanning :->, but it WORKS!!); with Scancat SE, which has fizzled BIG TIME so far, and wonder if I just flushed $160 down the toilet.....
I know, I know - should have asked FIRST.....
Cheers n lots-a-beers....
Thanks,
Don

This is a good scanner! 800mhz and it has been modded already! 100 channel and unblocked. Still looks great just wanting something else.Open to all trades make a suggestion
Thanks
Rob
crandall@ee.net

3406. Chicago PD - on 4xx.000 MHz still?

Newsgroup: rec.radio.scanner
Date: 2001-08-15 01:49:16 UTC
From: Mike Mayer <mayermh@ix.netcom.com>
Message-ID: <9lcl3g$b58$3@slb6.atl.mindspring.net>
Source record: 61324

Is the Chicago PD still in the 400MHz range repeaters, or have they moved to an 800MHz trunked system?

Will be there next week and I have all the 400MHz PD freqs, but haven't been there in years.

Thanks,

Mike

well gee that is a wonderful listing of everything you could possibly ever receive at the air show! Unfortunately you could put your scanner on search from 118 to 400 and have the same result--stuff all day, mixed up, and listening to the ground crew talk about parking while the tbirds are flying!

Note: I saw Tbirds recently and you want to concentrate on them only when it gets about an hour before their show, which will probably be the last event of the day. Go to tbird sites and get frequencies for all their stuff, but during the flight, only the airboss is important, he talks constantly, I don't even think the other guys say anything. He sings during the take-off procedure, and talks a lot, mostly says, "easing back, easing back," don't let the wife decide you will beat the rush out, cause the pilots all come out and sigh autographs after landing, the airboss will be on the left, and then all the others, including the doctor and ground staff. They will not sign autographs forever, so hurry up and get them!

Note that one of the main frequencies they use is 141.85 in AM. Most scanners get this frequency in FM, so if you want to get it clearly, get a pro 43 or better that will allow you to change it to AM.

Man, what a load of crap

Please get out of our way, as we have information to convey.
This newsgroup is not just for scanning people with scanners.
It is also for the guy with a bad soldering iron.
It is for people who want to ask any old question they want.
It is for people who want to screw with people's heads.
It is for people who want to flame other people.

Heaven and earth and this newsgroup are bigger than your imaginings.

Yes, Chicago PD is still alive and well from 460.025 through 460.550.
460.600 through 460.650 frequencies are FD/Paramedics. I can get every
Chicago "zone" on a rooftop discone very clearly, about 55 miles south of
the Loop (downtown). I can even get most of the channels using the stock
whip on three different scanners, so you shouldn't have any trouble.

I usually scan between the diamond formation and the 2 solo performers.
It's more fun to listen to the solos though. They really sound like
they're having more fun than the diamond. It's all business in the diamond
because they have to watch wingtips and such.

Nobody will get to meet pilots and get autographs at the show because it
is not at an airport but over the Lake Michigan shoreline.

I will agree that the digital market is going to cost the pocket book,
however!!! I will not complain about it. The FACT IS!
Digital is the better and if it that saves lives? I am all for it....

I would also address to Mr Eddy Woodruff (in the "dtrs" story) that
anyone who only has $45.00 in scanner equipment, has no grounds to
complain..... :-)

Just my Two Cents!

While it's difficult to give a specific reply to a general question, I can see a possible case where telling somebody " 'oh better not do that.' " is actually a good idea. If somebody proposes to do something that has the potential to get them in deep s**t, a friendly (and I do mean friendly) warning that their actions could have bad repercussions would be the decent thing to do. In some cases, the person who is being warned may not know that doing what they propose to do might cost them. Then, if they still want to do it, knowing the possible outcome, then think of it as Evolution In Action!

The local and state police in my area just got laptop computers in their cars with what I think are cellular packet data modems. They have new 800MHz transit and lopro type antennas on the rooftops of the crown vics and the 500MHz "data" channels are quiet. Ive tried to get a reading with an opto scout but have no yet been able to pic off their frequency.

Im missing alot of comms as I think they are typing messages to each other. They also seem to be randomly checking vehicle registrations as they go.

Does anyone know how to hack these systems? I have a receiver and data slicer is there software available? Could you use a pc card modem and alter the esn and spoof a real terminal? Is there encryption employed in any of the layers? There seems to be very little info out there on this one.

Any input would be appreciated.

BTW, I know its illegalI didnt ask that.

This reminds me of the Monty Python "Argument" sketch:

"Yes I did."
"You did not."
"Yes I did."
"Didn't."
"Yes I did."
"Didn't"
"Yes I did."
"Look this isn't an argument."
"Yes it is."
"No it isn't, it's just contradiction."
"No it isn't."
"Yes it is."
"It is not."
"It is. You just contradicted me."
"No I didn't."
"Ooh, you did!"
"No, no, no, no, no."
"You did, just then!"
etc, etc...

Did I mention Emilio Goldstien, the troll? He is famous for his
insanely stupid postings. He also has other infamy too...

I actually saw him on CNN... he's a script kiddie who got caught.
E. G. is not his real name but it is what he uses online. He did
get punished, but it was a slap-on-the-wrist sort of thing.

Hope you liked prison, Emilio, didja enjoy squealin' like a pig?

If you post something about anything, expect pro & con comments. Sorry, but that's just the way things are when you deal with folks who aren't really interested in patronizing you..... Harry Truman had the right idea when he put a sign in his office: "If you can't stand the heat, stay out of the kitchen" (along with "The buck stops here" on his desk).....
Cheers n beers,
Don

Hi ,

I have a Yupiteru MVT-9000MKII wide coverage handheld receiver in excellent condition with the OPC-90 protective case , box , manual , NiCads and everything that came with it that I'd like to sell or may trade towards a dual band mobile / handheld specifically a Kenwood TH-78A with accessories in good condition in appearance and function .

I'm asking $400.00 to buy outright .

Thanks ,
Kevin

Which raises the same old question; why the hell won't they put a speaker
on the thing so you can tell immediately if it's going off?

3435. MVT9000 vs MVT7000 vs AOR AR8200

Newsgroup: rec.radio.scanner
Date: 2001-08-15 21:01:38 UTC
From: LJ Murray <majestic.murray@virgin.net>
Message-ID: <_qBe7.4142$tG2.538558@news6-win.server.ntlworld.com>
Source record: 61251

I am looking to purchase a more powerful scanner after been bitten by the scanning bug.

The problem is which one. I have narrowed it down to three. The MVT9000, MVT7000 and AOR 8200.

I think the MVT7000 might be the way to go, especially as its the cheapest! My only concern is that its maximum range is up to 1650 MHz, where as the other two scanners are looking at 2039MHz. Should I be concerned about this? (I don't want to feel that I'm going be missing out on something)

Being fairly new to this game I'm not really sure what's going on at these high frequencies, so any help would be greatly appreciated.

Thanks in advance.

LJ

The difference in range is really immaterial. You're not going to find much, if anything to listen to, in the sky high range anyway. The more important issue is whether you'll get your money's worth from any of these scanners. It sounds like you're new to the game and the 9K and 82K are both tricky receivers to operate fully for beginners. They are packed with mind boggling features and come with tech-prose laden manuals that are confusing at best. Based on that alone, I'd recommend the 7K. It's a great all-around scanner, not difficult to learn how to use.

Jezz - talk about service!!!!! And a GOOD PRODUCT!!!!!!!!!!!
I ordered ARC5000 from BuTel, in the 'Netherlands', paid by PayPal, and had
the software via the net within two hours!! Gawd damn son, whada what??
And it WORKS, Egor, it WORKS!!!!!!!!!! At first I was a little apprehensive
since there wasn't a nice printed manual, but it works so intuitively, you
don't even need one..... Had all the freqs transferred from a data file
set up in Lotus 1-2-3 for my Yupi MVT-7100, to ARC5000 files for the
AR-5000, including all the individual channel parameters (the 5000 is
awesome for versatility) within a few hours after unzipping the file...
I'm impressed!!
Cheers n beers y'all....
Don

Where are you located?

What will you be listening to?

Do you need trunking capability?

These questions need to be answered before you can make a decision!

As far as 1650MHz vs. 2039MHz, it's in the same class as the number of
Angels capable of dancing on the head of a pin. You will most likely
never find anything there to listen to.

Walt

Ok...

My Location : UK, (Scotland to be exact)

I have been listening to Police, Fire, Air [and accidentally...Cordless Phones :)] on my old bearcat scanner, but I was keen to know if there was anything going on at higher MHz that I was missing.

I am not aware of trunking being used by any of the services here...yet

The use of a Frequency counter is much easier. I take my little Opto Cub with me everywhere I go. Pull near a cop, wait for him to pick up the mike and BAM, you got the input to the repeater. Now all you need to know is the repeater offset.

I wouldn't sell my ~5yr old Yupi MVT-7100 for anything less that I couldn't turn around and buy the latest version of it!! It's that good! *especially* on the 800-900 range, it even outdid it's big MVT-9000 brother, just by a nose, but it beat it..... A little less intermod also was noticed on the 30-40 range (coincidentally on the cordless phone freqs, like the 900 stuff, accidentally of course).... But, the 9000 does have a lot more bell & whistles, band scope, etc., and if ultra sensitivity isn't an issue, would be much more versatile. I don't have any experience with the 8200, but just got a AOR AR5000, which is totally awesome, and should be for the $$$$ - but it's a different cat altogether, more of a hybrid comm receiver/scanner..... The 8200 adds the convenience of PC control, although at a price for the interface over the radio cost (& software)..... But for bang for the buck, the Yupi 7100 (can't speak for the 7200 or 7300) is GREAT!
Cheers n beers...

If you don't require trunking, then all of the radios you mention have admirers. It probably depends upon what features attract you, and your available cash.

I find that browsing the 1.0 to 30 MHz region under computer control using the Band Scope adds a lot to the usability of a radio. Makes it easy to spot signal you might otherwise pass over. So, you might want to look for a radio with those features.

Also, the capability to add 3rd party Spectrum Analyzer capability to the PCR1000 adds a lot to one's understanding of what is going on re antennas, signal strength, sensitivity, etc.

But, as I mentioned, I think the lask few hundred Mhz of coverage beyond 900 Mhz is probably low on the list of selection criteria.

3448. Who makes a good RF signal pre-amp for 800MHz scanners?

Newsgroup: rec.radio.scanner
Date: 2001-08-16 01:31:49 UTC
From: leadenwah@aol.com
Message-ID: <20010815213149.24756.00001153@mb-fm.aol.com>
Source record: 61264

Considering the demonstrated poor sensitivity of most scanners to the 800MHz trunking signals, it would seem logical that someone has made and other have used an RF signal pre-amp to correct this problem.

Has anyone used such a thing ?

Thanks,

Geo.

Hi Geo,

There are some very fine (and expensive) upscale preamps that do a great job. Being cheap, I grabbed a $29.95 inline bullet 20db preamp from Radio Shack and mounted it at the feedpoint of a small groundplane. The preamp is sold as a Satellite/Scanner preamp. It is fed with about 40 feet of RG-6 coax and the AC wall mount powersupply feeds the preamp with DC through the coax center lead.. It works great from around 400mhz and up into the 1200 range and above. It passes frequencies below 400mhz without any amplification. I have also used one of these preamps with a UHF corner reflector TV antenna flipped 90 degrees to make it vertically polarized. That worked extremely well.

Good luck,

Ender

Well, I've maintained a subscription to both Monitoring Times and Popular
Communications for ten years or so now. Both are excellent magazines
featuring a variety of writers and topics. True, advertising is plentiful
in these periodicals. However, this really only provides more options on
where and what to buy when you are ready.

The main difference between the two magazines is probably depth. While
Popular Communications - PopCom for shot - offers a number of articles
each month, none really go to the depths that the authors of articles in
Monitoring Times - or just "MT" - do. MT is more geared for the hard core
or professional radio enthusiest.

The Uniden 245 Xlt will scan trunked systems and conventional at the
same time. Put the 860 Mhz freq. in one bank and the rest of the
trunked system in another, trunked bank. Just remember to designate
the trunkde bank to the type of trunking system when setting up the
radio scanner.It's easy to have this problem, neglecting to set
the trunking mode before programming the radio!

The CMA802 antenna is used to listen to cordless phones in the 47 Mhz range (legal here). It is sold at telstarone.com and spytrak.com sites.

http://spytrak.com/cs_cpma.htm
http://www.telstarone.com/cs_cpma.htm

How have you found it for listening to the 47 Mhz range, how long (feet) is it? how well does it perform outside the 47 Mhz range?

From a third-floor dorm at NIU I was able to get about half of the Chicago frequencies, back in the 80s. I would think you should be able to snag a few of the west-side zones with a directional rooftop antenna. It's worth the shot! Chicago is always amuzing to listen to.

liberal (li' ber al)
1a: of, relating to, or based on the liberal arts
1b: of or befitting a man of free birth
2: ample, full
3: broad-minded, especially: not bound by authoritarianism,
orthodoxy, or traditional forms
4: of or constituting a political party advocating or associated
with the principles of individual especially economic
freedom, greater individual participation in government,
and constitutional, political, and administrative reforms
designed to secure these objectives

If news has to be slanted one way or the other I'd much
prefer a liberal bias, thank you.

I believe it's called "dialogue". Since not all people think
alike, if someone makes a declaration in a news group
they should expect a few responses that are contrary
to their thinking.

Actually, this has helped me in the past, when I realized
that I was incorrect about an issue, or "barking up the
wrong tree". It has also actually saved me money.

I don't mind someone saying to me "buddy, you'r full
of crap, and heres why...". I many cases, they will make
a valid point and give me new ideas.

Today, there are so many "PC" people worrying about
negativity and sensitivity that it's a wonder anything
is accomplished.

Source record: 61284
Cross-posted to: rec.radio.scanner,alt.radio.scanner

-If you want to see take-off's, landings and maybe some high speed passes you can attend at the Gary, Indiana airport. T-Birds will do their ground routines there. You wont see the airshow, however.

-The frequency file on the PDF was pasted out of an "Andy" 780xlt programming spreadsheet which can be found posted in the Uniden780xlt group over at yahoogroups.com. You'll need to register an account with yahogroups to get access to the group and file. It can be used with the Andy application to program a 780xlt for the show. It's broken down into various service banks which I suggest using individually for show listening. When an act is in progress I scan bank one. When acts come and go I include banks one and three. When T-Birds perform I scan only bank two. During lulls in the show I'll sample the other banks. Our situation is somewhat different since we have more than one radio going during the show, usually several.

-The Chicago Police Dept trying to manage the traffic and crowds is a virtual "show" in itself. Same with the coast guard and the off-shore boat line. In addition to the T-Birds, Navy Leapfrogs, Northern Lights, Shell Aerobatic and a number of other leading acts will perform, so yes, there's a lot to listen to in addition to the T-Birds.

-"beating the crowd" is something of a misnomer. There is no way to do this even if you left an hour early. Traffic gets totally gridlocked. Even adjacent Lake Shore Drive slows to a crawl. The way to beat the crowd is to stay on the lakefront for an hour or two after the show. Great skyline and tons of marine band traffic. To say nothing of the more natural splendors which might grace your eye around North Ave beach at the end of summer.

-Warning: the show site is "intermod city". Bring a radio that does well in high background noise levels and maybe an in-line attenuator or a radio that uses one. High gain antennas will work against you without an attenuator. PRO-43's work fairly well.

-I do some searching before and at the show. Unless you know Chicago's spectrum very well you'll be hearing thousands of other area operations in addition to anything show related. Simply searching between 118 and 400 will not have the same result - it will have a much worse result. And actually you'd miss the CPD Marine units, which are on the CPD 800 Mhz trunked system. If you aren't hearing something that you think you should be - search. But take an educated guess at where the user might be and search there rather than dc-to-daylight. E.G. 122.0 -to- 124.0 for civil air to air, etc. Granted, there's a lot to listen to. I'd suggest sampling around to get a taste of the different services and operations present. If you only scan T-Birds freqs you'd miss ninety percent of the rest of the show.

-Weather right now and show days predictions don't look so hot. Grrrrrr.

-Probably the most important freqs to have in scan to listen to the show are the VHF and UHF Platform controls and the show arrival/departure freqs. We listed past used freqs but you'll want to confirm those first, they've been known to change. The flying fields - nearby Meigs Field for the low performance stuff, and Gary Airport for the high performance stuff, are known factors.

Happy Scanning! - Ted Moran

3468. Frequencies for home portable home phones?

Newsgroup: rec.radio.scanner
Date: 2001-08-16 13:25:17 UTC
From: Shhhhh!! <qaunta@qaunta.screaming.net>
Message-ID: <997968337.143563@igateway.postoffice.co.uk>
Source record: 61281

Just a question?
What is the frequency of the portable home phones people use?
Some operate at about 46MHz. But I beleive the newer ones work on a higher frequency?

Any ideas?

Thanks.

> What's a script kiddie ? A pedophilic journalist??

Heh... close enough...

A script kiddie is a "hacker" who uses tools written by others to break into computer systems through known vulnerabilities. For example, if your NT net is hacked by BackOrifice by someone, that someone is a script kiddie. He has no knowledge, just got his hands on some tools.

Script... from Unix scripts, like Perl or shell scripts. Often what these tools are.

Kiddie... as in 8-14 year old.

> or professional radio enthusiest.

Is it just me or has PopComm gone downhill in the past 5 years or so? I stopped subscribing to it about a year ago or so, and now only read MT. It just seemed that most of the information, such as loggings, etc. was about 6 months old, and much of it erronous. In fact, one month the "Pirate's Den" column had pirate stations logged that had been on around a year previous, and many of which hadn't been on the air in some time. Maybe it was just a snafu, but it was strange.

No time to enjoy this fine communications hand held receiver:
Alinco DJ-X10T .1MHz - 2GHz AM/FM/WFM/SSB/CW HT cell blocked (AES
$309.99)
includes stock 4.8v 700ma NiCd EBP-37N battery, stock duck antenna, box,
charging stand, belt clip, wrist lanyard, manual
Extra EPB 37N 4.8v 700ma NiCd battery
(AES 34.99)
EPB 34N 4.8v 1200ma NiCd battery
(AES 84.99)
EDH-16 AA battery case (NiMH AA's work great in this!)
(AES 12.99)
W&W 4.8v 2500ma NiMH EPB-34 battery
50.00
ESC 30 Case for 34N battery
(AES 13.99)
ESC 29 Case for 37N battery and EDH-16
(AES 13.99)
Telescopic BNC antenna
12.00
Total I have into this:
$532.94
This rig is in mint shape and is computer programmable with 1200 memories.
There is a free program to use on your computer available at the Alinco
site.
The cable from the Yaesu ADMS software works fine with a Radio Shack adapter
plug.
I will sell all for $350.00 plus shipping US post office or UPS, your
choice. US post office money order only.
Please email direct.

Anyone care to elaborate on Daniel's response? So far, I've really only listened to Police, Fire, and the control tower at the Reno Air Races - not much else.

I really like the look of the DJ-X2000, but it apparently only scans at 5 ch/second. That seems awfully slow to me. Also, according to the reference page on the Strong Signals website, the DJ-X2000 receives using the following modes: AM, FM, WFM, USB, LSB, CW.

The AR8200MkII scans at 37 ch/second and receives the following modes: FM, SFM, WFM, AM, NAM, WAM, CW, SSB.

I guess what I'm now wondering is
1) is 5 ch/second too slow
2) what are SFM, NAM, WAM modes (and would I care if my scanner didn't have them.)

Like I said, the DJ-X2000 looks great. The AR8200MkII just doesn't look as solid, although I'm still VERY seriously considering it.

I realize it's impossible to say one scanner is better than another. I've pretty much decided on getting one of these two scanners. I'm just trying to get more information on each before I spend my money.

Best regards,

Adam

You stand a good chance, When I'm driving between Chicago and
Milwaukee, I can usually hear Chicago at least to the state line.
Milwaukee uses some of the same 460 MHz frequencies so they take over
when I get closer to Milwaukee.

I have just begun to make a regular practice of scanning the nearby Nellis AFB, and have reliable sources for frequencies. I have noticed there are frequencies for approach, departure, tower, ground control in the military air band, and also in the civilian air band.

Both bands are active, I'm wondering if, for example, approach control simulcasts on paired frequencies in both bands, and, if not, when would either band be used instead of the other.

For people who regularly monitor air bases, what is the best method for monitoring?

Thanks in advance.

3480. VCR gadget in PopComm Magazine

Newsgroup: rec.radio.scanner
Date: 2001-08-16 19:13:10 UTC
From: rdsmyrna@aol.com

Source record: 61296

About 5 or 6 years ago PopComm magazine ran an article about a little black box that allowed a VCR user to record the ant signal input before demodulation. Upon playback the signal was fed throught the TVs' demod and the appropriate channel on the TV selected. This allowed recording all channels receivable in your area (if using an ant) or all unscrambled channels (if using cable).

1. I need a xerox of that article, which ran in the Spring and was followed up the following month with a revision.

2. I need info from anyone who has used this gadget.

3. I need someone to build me this unit (as I'm a total idiot with a solder gun).

Please e-mail me, rather than post here.

Thanks,

This is a warning notice to all in radio land about a test equipment company located in Auburn, KY. They are Auburn Metrological Labs at 12345 Bowling Green Road, Auburn KY. 42206. Their number is 270 542-6000.

Based on information given to me by their General Manager, Ken Knowles, they would be able to repair my Cushman CE-50 that was having a receive problem. It generated fine and all pll were locking fine. They gave me an estimate of under $300.00 with a turnaround of about one week. I sent it to them for repair on February 24, 2001 based on this information. After a couple of months went by without even an acknowledgment of receiving it, I tried to contact them by telephone and email. Still I received no information on it and after numerous emails and a couple of letters, one being a legal demand letter, the unit showed up at my door with a 110.00 COD charge. After contacting the company I was advised that Ken Knowles was on vacation and the service manager was arrogant, rude and even hung up on me. If you value your equipment and it is in need of repairs or calibration, PLEASE do Not send it to them. You will regret it.

My options, against them, are not exhausted but I would rather have never had the problem to begin with. It has the tendency to taint all repair facilities. This outfit was recommended by a person from one of the amateur news groups. I hope I have prevented any grief for others by this post. Thanks for listening to my ranting. 73's Don Smith KB6GQA

Sorry Donald, I really do not understand your need to express your views here. As I read your post you paid $110 when they estimated "under $300". We have your side of the story and I do believe you version, but I think it is fair to have the other side. I am involved in servicing and while perhaps 95% of all repairs are straightforward, some do go wrong. I'm not really trying to give excuses, but some of the problems I have encountered include.
Leaving a message at the contact phone number regarding repair and they do not pass it on (they will never admit this later).
Wrong phone number supplied.

No response to phone calls (or message left). Please understand I may have 50 repairs at any one time and I can not call each client 5 times daily (work it out).
Email can be impossible. I often receive over 300 messages per day. How can I read or replay to them all and still have time to repair your radio?

I have also hung up on callers. Some can never see reason.
No doubt others have had bad servicing experiences, but many will have good ones. We will always hear the complaints.

Best Regards
Neville

Find a product called "Klasse All-in-One", it's wonderful stuff.
Removes surface scraches from plastic, acrylic and just about
anything else.

From: Mike Burch <libertybell7@home.com>
Message-ID: <3B7C3B8B.A4A607A1@home.com>
Source record: 61207

Hi fella's

Could any of you please help me based solely on your own experiences?

I have 1997 olds 88 and I would like to mount my Pro 2006 w/opto456lite/optoelectonics scout 40 reaction tuner in the trunk under the surface that the rear speakers would mount to and pipe the audio over the fm broadcast band using a retransmitter that a good friend generously gave me. It will be suspended by an actually pro 2006 mounting bracket. The receiver will be powered from 13.8 vdc only and tapped from the feed to the powered telescopic antenna in the back of the vehicle. I am doing it this way to keep it out of sight and mind. (Not mine) :-)

Facts...

1.) The car will eventually wind up in southern Arizona.
2.) The trunk is clean and very dry.
3.) I have not noticed any really excessive heat build up in the trunk or at least it did not seem nearly as hot as it was in the passenger compartment on a hot day.

Questions...

1.) Will the heat be too excessive and damage the unit?
2.) Will vibration be an issue? The suspension is pretty good and smooth.
3.) Do you think a supplemental muffin fan pointing at the radio would help? Perhaps powered up only when the radio is in operation?

Thanks in advance for the feedback and opinions.

With kind regards

Mike Burch K8MB

3492. BC 230XLT?

Newsgroup: rec.radio.scanner
Date: 2001-08-16 21:37:48 UTC
From: Chas <newsstuff@NO-SPAM.subdimension.com>
Message-ID: <3b7c3a74_2@corp-news.newsgroups.com>
Source record: 61208

I was attempting to find any mods for my 230XLT.
All the ones I find are for the 220XLT, but they are the same as 200, and this has a different board in it, so the mods do not work.

Funny thing is, the box has 230XLT on it, the manual has 230XLT, BUT the scanner has 220 XLT on it?

So which is it? a 220 or 230?

My Yupiteru squelch no longer works:
Fully open or closed, I no longer receive any static. The only way I
can get the static/ open frequency noise is to push the "moni" button.
It just started doing this recently. Is there a squelch fix or
adjustment? Also, can anyone recommend a repair place that can handle
Yupiteru in the USA (Loose BNC connector on the unit is causing
antenna short).
Any info would be appreciated!
-Highlander

Dear Neville,

If you are as busy as you say, you owe it to your customers - and yourself - to hire help... if only office help, to keep open the lines of communications between you and your customers.

The key word here is *service*! To do this, you must be able to take a true interest in your customer's concerns, then make every effort to satisfy them. After all, you are in the business of offering a service - not a bad experience.

Methinks the service folks who have attitudes similar to yours_are_part of the problem; it's always the *other guy's* fault - never yours. Have you ever considered the possibility that_you_may be the one who is lacking reason? In any event, hanging up on a customer is as un-professional as you can get!

In the final analysis - when your service business fails - you will have no one to blame but yourself! I hope you come to your senses before that happens...

The controllers make a practice of transmitting on UHF and VHF at the same time.
The military uses UHF and civilians VHF basically.
Some military carry both frequencies. But because of weight and cost fighter aircraft normally carry only UHF.
By simulcasting at least the civilian aircraft can hear one side of the military traffic.

Al
"Tradewind" <bellp400@msn.com> wrote in message
news:35ba9d22.0108161109.64528e76@posting.google.com...
I have just begun to make a regular practice of scanning the nearby
Nellis AFB, and have reliable sources for frequencies. I have noticed
there are frequencies for approach, departure, tower, ground control
in the military air band, and also in the civilian air band.

Both bands are active, I'm wondering if, for example, approach
control simulcasts on paired frequencies in both bands, and, if not,
when would either band be used instead of the other.

For people who regularly monitor air bases, what is the best
method for monitoring?

Thanks in advance.

While maybe not electrically, I'd put my money on the case taking a
beating in no time. Leaving the 200x in the sun on a hot day has done
more than a bit of damage to several 200x cases in the past. I just
obtained a perfect example of one of these last week!

Besides, what is the environmental spec in the 200x manual? I don't have
one handy or I'd check.

> 2.) Will
> vibration be an issue? The suspension is pretty good and smooth.

I doubt it, unless you take off across the desert "cross country" style.
Even then, the 200x is a sturdy unit.

> 3.) Do you think a supplemental muffin fan pointing at the radio would
> help? Perhaps powered up only when the radio is in operation?

Probably not. In this case moving hot air isn't much better than stagnant
hot air.

Just look at what happened with the New York City Fire Department. A couple of firefighters almost lost their lives because their digital radios sucked. Of course, they quickly went back to their good ol' VHF units. Haven't had a problem since...
All these states that are looking to waste tax money on crappy, useless radios won't learn, unfortunately, until public servants begin to die in the line of duty. It's a shame that they're willing to sacrifice these people just so they can say, "We have shiny new hi-tech toys!"

Hello Neville,

Unfortunately, I cannot accept your justifications... obviously you either reside in a well populated area - else you would have run out of customers by now - or you exaggerate the time you've been in business... without any office help!

In no way would I work in someone's shop again... I moved past that 30 years ago when I went back to school for my degree. At that time I was the national service manager for a well known international corporation.

As far as my business background, it is extensive...

It's obvious you see nothing wrong with your business attitude, therefore I see no reason to continue this thread. Good Luck!

Here is a response I got from the author:
The 780xlt software is not CTCSS capable, so few people use the
feature that it was not included.
The software is only on CD. It is written in visual basic I have
not tried using larger fonts but it is designed for the default sizes.

I use CTCSS, here in NY it is a very good feature, due to all kinds of
interference and other stations breaking squelch.
Too bad, was gonna order it.

Thanks Jim! I'll look into ordering a 245xlt- little did I realize
that the radio will scan both trunked and conventional frequencies at
the same time.

Do you own a BC245XLT and if you do how do you like it?

Barry

So was it the digital radio which caused them to almost lose their lives or was it something else like a fire? Depending on a radio to save your life will get you killed.

> All these states that are looking to waste tax money on crappy,
useless

The sheriff's department I dispatch for uses digital trunked radios and in the six months I've worked there the only problem we've had is when the power would go out (happened once) and the backup generator wasn't quite fast enough...

3511. FS: Icom IC-R2 + Active Antenna, $200

Newsgroup: rec.radio.scanner
Date: 2001-08-17 00:51:14 UTC
From: Randy Phillips <randy@rancyland.net>
Message-ID: <4iqontceufilep3gb8quu9a491va3rhspb@4ax.com>
Source record: 61227

For Sale:

Icom IC-R2 Communications Receiver with antenna, NI-Cd batteries with recharger, beltclip and documentation in original box.

Package also includes Active Duck Amplified Antenna, great replacement for stock rubber duck. Covers .5 MHz - 1.3 GHz; amplifier effective on .5-60 MHz (bradcast/shortwave); includes extra A23 battery. Orig. price $50.

NOTE: Active Duck has a BNC connector, while the Icom has an SMA connector; you will need an inexpensive adapter (not included) to use them together.

All components sold as a package for $200 firm + shipping.

Interested? email randy_at_rancyland.net (replace _at_ with @).

3512. Assistance with RCA RP-6100A

Newsgroup: rec.radio.scanner
Date: 2001-08-17 01:08:55 UTC
From: DougSlug <twinpoppa@hotmail.com>
Message-ID: <H8_e7.2900$ZV5.620192@news02.optonline.net>
Source record: 61228

A co-worker handed me an RCA model RP-6100A handheld scanner today asking for assistance. It is a 20-channel unit, FM only, 8 bands (30-50, 50-54, 137-144, 144-148, 148-174, 380-450, 450-470 and 470-512 MHz) Does anyone know of a source of information (manual, etc.) for this model? It looks a lot like a PRO-43, and I'm wondering if it is the same as that model or a similar Radio Shack (Uniden, GRE, etc.) model.

Doug

> Thanks,
> Hugh.

I wonder what my 2005 would go for? It's "all open"
and does close to the 2006's peaked 30 ch/sec (27-28 if I recall
correctly). I had installed a 10 MHz crystal in place of the oscillator
when I bought the scanner, dropped in that +10% diode, and clipped
another. Truth is, it's as good as either of my 2006's technically and
arguably in better condition as well!

Of course the 2006's aren't going for that much more than the 2005's up
on ebay.

No problem, but in case you're stuck finding the info you're
after I still have some of Ron Roth's Pro26 modification instruction
sets left for sale. They show how to monitor the entire 800 MHz range,
leave the backlight on permanently, disabling the battery low beep and
lowering the beep volume. Drop me an email if interested.

Fortunately no such restrictions or laws in Canada with these simple
exceptions:
1) In the province of Manitoba you are not allowed to have a scanner
in your car.
2) You may not divulge anything you hear on your scanner (yup, cell
freqs are no problem) to anyone else.
Canada is a nice place to visit, y'all come :)
Bart Veerman.
P.S. the new Haruteq book will be available this coming Monday, check
my website for details.

wrote:

can't comment on the DJ-X2000 as there just wasn't enough out
there about it to satisfy me when I made my decision and went with
the AR8200MKII. Having had it for less than a month I can say that
I would feel in a world of hurt if 5/sec. was all I could get.

Example might be Aircomms. Aircomms will most likely be brief,
you can follow several flights on both approach and departure and
other types of aircomms. But to do that you might have a bank of 30+
channels easy just to cover a few local airports. If the avg. comm is
only a few secs. than you can see a HUGE diff. betw'n scanning the
whole bank in 1-2secs. versus doing the same scan in 6-7secs.
Remember the Egypt Air that crashed ? If the co-pilot had had an open
mike you might have missed all of it at 5/sec. See what I mean ?

Though I've some exper. as a Ham, the AR8200MKII is my 1st scanner.
When I got it I thought I wouldn't care much about scanning when I could
use "search" just as well. Well, boy was I wrong. Once you've got a bunch
of good freqs. programmed into scan then things start to take off. Hope I'm not
talking down to you as I mean no offense to anyone. But I guess you can
see what side I come down on.

So answer to 1 is: Way Slow.

Answer to 2 is: Super Narrow FM, Narrow AM, and Wide AM
but I'll let the Gurus explain it better than me,

"Not as Solid?" Possible. The strongsignals.net review mentions
a off-kilter antenna (when ant. is mounted it is cocked in towards
middle). Mine does have this annoying feature. This is no tough-guy
kiddie proof FRS from Toys r Us that's fer sure. I'm very careful with
mine. But I still love it, I'm very pleased with performance and other
featuers and from Jonathan at Javiation the price of 350 brit pounds
was better than any US or CA price (plus other overseas added
attractions). Shameless plug for Jonathan, but he gave great service.
E-mail me if you want more detail.

Hope this helped,

Andrew

After some more research (Google instead of AltaVista), I learned that it is a PRO-50, and even managed to find operating instructions from Radio Shack online.

On June 15th I contacted a Mr. Nate Gingras of Oak Creek, Wisconsin about
a 1937 Crosley he offered for trade of a shortwave receiver. This was through a
Usenet posing. Over a period of a couple of days we negotiated a price
of $50 plus a Realistic DX-150 and matching speaker in exchange for
the Crosley he had. I sent the DX-150 plus cash via UPS and it was acknowledged by Mr.
Gingras that he had received the radio and monies.

After about the third week and still no Crosley, I began to get concerned.
Mr. Gingras claimed he had shipped the radio via US postal and that he would
"let me know if he heard anything from the post office". An exchange
of emails over the past 4 weeks in which I requested the return of the
DX-150 and $50 has resulted in claims that he had it shipped "ground"
and "priority package" and that he would "check with the post office".
The most recent email he claims
that he would send the radio back, but he doesn't have the $50 so he
is going to keep the radio. He claims that the post office will
investigate after 45 days. We are beyond that time.

I normally don't post to the Usenet groups, but this guy is bad news.
He has
refused to return my items and is quite firm that he will keep them.

As a dispatcher, you should know that the people in the field DEPEND on
their radios to get them help when the fecal matter hits the rotary air
mover. (I speak from experience, having been a 911/police radio
dispatcher.) What happened in NYC was that several fire fighters became
trapped in a burning building. Due to the nature of digital modulation
(either it's ALL there or NOTHING is there), they were unable to answer
repeated calls from the scene commander checking on their welfare, nor were
they able to convey their location and condition. It required a search of
the burning building (placing even more fire fighters at risk) in order to
locate and rescue the trapped fire fighters. Had these been the old analog
VHF radios, at least part of their calls for help would have gotten out.

800 Mhz trunked digital is probably least-suited for fire operations. 800
MHz is notoriously unreliable in and around buildings. Combine this with

the "all or nothing" nature of digital modulation and you have a receipe for disaster. A S.O. may have the best conditions for 800 Mhz digital, depending on the terrain. (like the man says: "your mileage may vary". See the Sept. 2001 issue of Popular Communications, Pg 18, for a good discussion of the pros and cons of digital modulation, by Gordon West, WB6NOA.

Well, as a subscriber to both, I'd have to say that both magazines have their shining moments, and some not so shining. For instance, Pop. Comm. has a really good article this month (Sept. 2001) on digital trunking by Gordon West. While a lot of the information I had previously gleaned from various other sources, this was a comprehensive article written by an expert.

It seems just when I get fed up with one or the other, they'll come out with some really good articles. So, I'm keeping both coming in the mail every month.

No.

Editorial comment: People who ask about cell mods for a scanner that they purchased in the U.S. within the last few years really ought to find something else to do with their time and money. At the moment, it's apparent they have too much of both and not enough sense to know how to use either.

I use the protective film that's shipped on most laptop computers and some desktop monitors. Simply cut a piece to size, put a few drops of water under it, and squeegee it smooth. I've been using this method to protect my GPS displays while mountain biking and it works great! The screen looks a little different than with no protection, but it's worth it.

This method is also _FREE_! Ask for the stuff from your IT department at work, local computer stores (from demo models), or get your boss to buy you a new computer. <G>

Have fun,
Barry

I think the equipment is set up that way -- the controllers don't have much of a choice.

>Some military carry both frequencies. But because of weight and cost >fighter aircraft normally carry
>only UHF.

That was true in the old days, but the modern/modernized aircraft (including fighters) have VHF & UHF, some even 30-88MHz.

I used to use plain ole Turtle car wax to take the scratches out of the face of VTVM's (that's a vacuum tube voltmeter for the kids in the audience), and it worked great - just had to wait an hour or so before the static charge wore off and the meter would return to zero. (:->))

Have heard of some people saying they used Brasso polish on their LCD with good results, since it does use a very light abrasive agent.....

You might also look into using the protective sheets they make to
protect the screen on a PDA like a Palm or Pocket PC. They're cheap,
durable, very clear, fairly easy to apply/remove and you can get them
online or at most office supply stores.

Best,
Randy

They may have done what the Orange County (NY) Sheriff's Office did - put a 'distracter' tone on a frequency to divert scanners from the active transmissions - it's like scrambling, but cheaper.

The secure network rarely defiles Chris, it tolerates Mitch instead. Gawd Edward will contradict the warning, and if Quincy happily defeats it too, the fax machine will preserve for the huge cyphertext. Quinton will create the upper client and build it to its data center. Let's insulate under the virulent interfaces, but don't pump the pathetic toffees. If you'll type Debbie's contact with packages, it'll hatefully exclude the interface. When Chuck's haphazard webmaster spools, Stephanie substantiates within blank, virtual Back Orifices. Who obscures seemingly, when Maify interfaces the silly scanner on the eternity server? Some important sly dictionarys will lazily compile the IPaddrs. The terminals, keypads, and blackbirds are all unclassified and filthy. To be quiet or weird will inflate junk trackballs to superbly filter. Tell Vance it's overloaded pulling around a FORTRAN. The weak stuck mixmasters eerily dump as the lazy governments persevere. If the chaotic Pascals can distribute sadly, the unique bug may facilitate more news servers. Karen, have a rogue chatroom. You won't interface it. Darcy wants to corrupt halfheartedly, unless Jonas kicks llamas inside Nelly's advisor. Just closeing without a computer with the web page is too vulnerable for Norma to disrupt it. Don't get surprisingly while you're stoping over a untamed output. Don't even try to contribute the stacks truly, examine them strongly. What will we burst after Marty rebuilds the useless newsspool's RAM? Where doesn't Woodrow dream neatly? Will you negotiate around the network, if Petra angrily formats the TCP/IP? He will connect annually if Ayn's text isn't robust. Many untouched remailers are lower and other extreme inputs are insecure, but will Chuck produce that?

Yes, there will always be a problem with digital compared to analog
when the signal level is low and distorted.

With a high signal level, they both sound great. So what?

With a moderate signal level, analog will sound slightly noisy, and
digital will sound perfect. So what?

With a very low signal level in analog, you hear a noisy, but
comprehensible, voice.

With the same signal level in digital, you may receive NOTHING! That
is the problem.

Walt

I don't know...I'm pretty sure I could hear it even in a 172 or 150.

At any rate, it would reduce the number of people that walk away without
checking to see if a hard landing has set it off.

Otherwise the PERL in Carolyn's protocol might learn some ugly screens. Why Pilar's rogue ethernet closes, Jeanette reloads to useless, sticky complaint desks. One more lazy buillon or field, and she'll weekly keep everybody. To be foolish or untamed will examine vulnerable engineers to slowly obscure. Roberta wants to train grudgingly, unless Pete interfaces emails for Felix's FORTRAN. Where will we disrupt after Ralph fetchs the dense bit bucket's artichoke? Other violent extreme tablets will distribute superbly beside ISDNs. I inflate upper noises at the resilient orthodox hard disk, whilst Tamara steadily compiles them too. Who questions stupidly, when Calvin stops the clear admin around the cyberspace? While mixmasters actually relay fax machines, the robots often start around the major tapes. Many sharp chaotic subroutines will inadvertently delete the frauds. Will you dream at the buffer, if Jimmie tamely vexates the operator? It contradicts, you pump, yet Varla never furiously locates at the scanner. He will shoot annually if Cyrus's modem isn't loud. Nowadays Jezebel will interface the error, and if Frederick admiringly kicks it too, the hacker will slump throughout the dry eternity server.

I have in my personal possesion the following scannerI have a Used
Alinco Dj-x10t scanning reciever

Antenna rubber has wear and tear on it

I have the manual and the box also

all parts that came with it originally

comes with the following accessories

2 - EBP-34N 4.8v DC 1200mAH long life Ni-Cad battery

2 - EBP-37N 4.8vDC 700mAH standard size Ni-Cad battery

EDC-60 desktop 120v AC rapid charger

Motorola Speaker Mic, used as a speaker

here are pictures

http://www.angelfire.com/or/KCDMS/images/Dj_x10t001.gif
http://www.angelfire.com/or/KCDMS/images/Dj_x10t002.gif
http://www.angelfire.com/or/KCDMS/images/Dj_x10t003.gif
http://www.angelfire.com/or/KCDMS/images/Dj_x10t004.gif
http://www.angelfire.com/or/KCDMS/images/Dj_x10t005.gif
http://www.angelfire.com/or/KCDMS/images/Dj_x10t006.gif

antenna is loose and wobbles when attached but otherwise in like
condition from pictures

asking 300.00 shipped for all that which is listed above.

Next are 2 scanners that belong to a friend

1 is a BC890XLT scanner and a BC147XLT

asking 120.00 + shipping for the 890

and 50.00 for the 147 + shipping

or they may give a deal if you get them together.

Neville,

I think you miss the point. If the person doing the service quotes that the work will be done in a week or whatever, then misses it by a factor of 10, then the person did not live up to the agreement. The man's point is correct, you are in a service business. Deliver the service that you commit. If you tell people if will take months at half the price, then so be it if that is what they accept. No one appreciates a commitment that cannot or is not, delivered. And yes, in some cases, I would pay more to receive good service. Poor service at half the price is no deal in my book.

JMHO

When a VHF freq is keyed, a UHF freq may be keyed up if there is a companion UHF freq. This is so the mil a/c can stay informed of civilian traffic. The tanker/cargo a/c have dual VHF/UHF/ADF comm/nav. Fighters just have UHF AM comm. The years ago the newer F-16's had a L/VHF set for communicating to ground forces. The A-10s probably had the same. The now retired F-111s had a 400 watt HF comm radio and Satcomm.

What you need to get a hold of is Bill Cheek's Scanner Modification Handbook, Volume 1 and 2. Forget Vol 3. There aren't too many mods that aren't in these two books for the 200x series. Obviously, they are out of print but you might find 'em in a large library or on EBay or someone on this list many want to part with same.

I run all mine off external DC supplies. They vary from 500 ma to 1 amp. Heat from the AC transformer and power resistor inside will be a killer. Also mod the display light so that it is OFF. Only turn it on when you need to read the display.

I don't recall ever seeing a wall-wart power supply (or any other
common analog supply) that contained a power resistor. Any heat
that's being generated is either from the transformer, or from a
regulator (if so equipped).

-Thanks to our source the platform frequency for Friday's show was found and is as has been reported 135.500 vhf / 310.800 UHF. Approach and Departure control was on 126.800 vhf / 308.400 uhf. 133.625 vhf / 315.600 uhf Approach and Departure was used very briefly.

Other ATC:
121.300 / 257.800 Meigs Tower
125.600 / 256.700 Gary Tower
133.100 / 285.600 Gary Approach

123.175 ShellAero Aerobatic Team
136.975 Northern Lights Aerobatic Team
138.475 IL ANG F-16's air to air
123.475 Red Baron Pizza Stearman Squadron air to air
123.475 Sean Tucker Air to Ground audio patch to PA system
123.425 LIMA LIMA Squadron air to air
153.830 Chicago Fire Department
458.625 Chicago Dept of Aviation
458.075 Lifeguards
141.850 Thunderbirds VICTOR1 (diamond)
143.850 Thunderbirds VICTOR2 (not used Friday)
322.950 Thunderbirds UNIFORM1 (solos)

Callsigns:

JEDDI - C-141
ROMAN - F18 (Virgina Beach, VA)
DUECE91 - KC10 Tanker
YANKEE - A-10's (x2)
BADBOY - Apache Helo Squadron (air to air not found)
JUMBO - C-5
CODER - KC-135

And making it's Chicago Lakefront Air and Water Show debut...

SENTRY - E3 AWACS (Offutt AFB) (Friday Only)

I visited Alcatraz back in January and took a snapshot of the control room. Everything's pretty much the way it was when the prison was shut down in the early 1960's, including the vacuum-tube-based radio equipment. I think much of it was Hallicrafters stuff.

Source record: 61109

I have some questions that I hope at least one of you folks out there can answer. Im looking to buy a scanner and I was looking at the bc 80, but saw somewhere that this is a blocked scanner. I dont want a blocked scanner I like things available if I want them. Is this a blocked scanner and if so can you tell me or direct me to a page that tells me more about blocking/unblocking?

Also is this a crappy scanner? Whats a good one for just some fooling around now and then and listening to the police when I hear something going on? If things are easily unblocked then Im all for it ! Also will consider buying a used one! Anyone?? only if you are a regular auctions seller :)

u can also reply to !!justus@justourlove.com remove the !!

thanks

Hi,
I'm looking to repair a Regency HX1500 portable scanner. The display constantly reads "Fr Err".
I can program frequencies, use the manual key, bank key etc but it will not scan or receive. Does anyone have any tips ??? Please help!!!!!!!!!!

Thanks,

frustrated

Try emtronics in the Sydney CBD. He should be able ot order one in for
you as well.

Okay, didn't know the whole story there. I don't know about the problems in
or around buildings, though. Just today I was listening as the fire
department tackled a pretty big structure fire. Other than it being
somewhat more difficult to understand due to their breathing equipment, they
were coming over just fine. But it was a smaller building, maybe it's the
large ones that give problems.

I had an HX-1500 back in the 1980's that did the exact same thing. It would scan for abot 15 minutes then the display would suddenly read "fr err." I sent it back to Regency two times for repair. Each time they sent the radio back with a note saying that the scanner performed to factory specs. I was able to sell the thing at a flea market for ten bucks. It was a great scanner when it worked. I wish I would have known how to fix it. Good Luck!!

There is (or at one time there was) a provision in the FCC rules for
"Any Public safety"(IE police) to operate on any freqeucny available to any
government service/agency (ie trash pick up) at will.
If I remember correct the power was limited to 3 or 5 watts.
We are doing the last touches on finosh work on our new house, so it may be
several days until my desktop PC is back "on line".
I will dig orugh my old frequency allocatoins for the proper cite.

When I got to looking thorugh the misc txt files onthe POS pc, I found
this data base. Please note, I did not compile this list.
It was given to me by a friend who got it from a 3rd party.
The database is dated and mostly limited to central Kentucky.
I did check the FCC site several (5?) years ago.
PD is the old FCC service code for police.
All of the freqs listed herin are in some way realated to police/enforcement
activities.

40-952MHz Part 90.19(6)(g)(3)allows pd to use 2wt on any
